A SHORT HISTORY OF THE ENGLISH PEOPLE

CHAPTER X.

MODERN ENGLAND.

Section I.—William Pitt, 1742—1762.*

THE fall of Walpole revealed a change in the temper of England which was to influence from that time to this its social and political history. New forces, new cravings, new aims, which had been silently gathering beneath the crust of inaction, began at last to tell on the national life. The stir showed itself markedly in a religious revival which dates from the later years of Walpole's ministry. Never had religion seemed at a lower ebb. The progress of free inquiry, the aversion from theological strife which had been left by the Civil Wars, the new political and material channels opened to human energy, had produced a general indifference to all questions of religious speculation or religious life. The Church, predominant as its influence seemed at the close of the Revolution, had sunk into political insignificance. The bishops, who were now chosen exclusively from among the smaller number of Whig ecclesiastics, were left politically powerless by the estrangement and hatred of their clergy;

* *Authorities*.—Lord Stanhope and Horace Walpole, as before. Southey's biography, or the more elaborate life by Mr. Tyerman, gives an account of Wesley. For Pitt himself, the Chatham correspondence, his life by Thackeray, and Lord Macaulay's two essays on him. The Annual Register begins with 1758; its earlier portion has been attributed to Burke. Carlyle's "Frederick the Great" gives a picturesque account of the Seven Years' War. For Clive, see the biography by Sir John Malcolm, and Lord Macaulay's essay.

while the clergy themselves, drawn by their secret tendencies to Jacobitism, stood sulkily apart from any active interference with public affairs. The prudence of the Whig statesmen aided to maintain this ecclesiastical immobility. They were careful to avoid all that could rouse into life the slumbering forces of bigotry and fanaticism. When the Dissenters pressed for a repeal of the Test and Corporation Acts, Walpole openly avowed his dread of awaking the passions of religious hate by such a measure, and satisfied them by an annual act of indemnity for any breach of these penal statutes; while a suspension of the meetings of Convocation deprived the clergy of their natural centre of agitation and opposition. Nor was this political inaction compensated by any religious activity. A large number of prelates were mere Whig partisans with no higher aim than that of promotion. The levees of the Ministers were crowded with lawn sleeves. A Welsh bishop avowed that he had seen his diocese but once, and habitually resided at the lakes of Westmoreland. The system of pluralities turned the wealthier and more learned of the priesthood into absentees, while the bulk of them were indolent, poor, and without social consideration. A shrewd, if prejudiced, observer brands the English clergy of the day as the most lifeless in Europe, "the most remiss of their labors in private, and the least severe in their lives." There was a revolt against religion and against churches in both the extremes of English society. In the higher circles of society "every one laughs," said Montesquieu on his visit to England, "if one talks of religion." Of the prominent statesmen of the time the greater part were unbelievers in any form of Christianity, and distinguished for the grossness and immorality of their lives. Drunkenness and foul talk were thought no discredit to Walpole. A later prime minister, the Duke of Grafton, was in the habit of appearing with his mistress at the play. Purity and fidelity to the marriage vow were sneered out of fashion; and Lord Chesterfield, in his letters to his son, instructs him in the art of seduction as part of a polite education. At the other end of the social scale lay the masses of the poor. They were ignorant and brutal to a degree which it is hard to conceive, for the increase of population which followed on the growth of towns and the development of commerce had been met by no effort for their religious or educational improve-

ment. Not a new parish had been created. Schools there were none, save the grammar schools of Edward and Elizabeth, and some newly established "circulating schools" in Wales, for religious education. The rural peasantry, who were fast being reduced to pauperism by the abuse of the poor-laws, were left without much moral or religious training of any sort. "We saw but one Bible in the parish of Cheddar," said Hannah More at a far later time, "and that was used to prop a flower-pot." Within the towns things were worse. There was no effective police; and in great outbreaks the mob of London or Birmingham burnt houses, flung open prisons, and sacked and pillaged at their will. The criminal class gathered boldness and numbers in the face of ruthless laws which only testified to the terror of society, laws which made it a capital crime to cut down a cherry tree, and which strung up twenty young thieves of a morning in front of Newgate; while the introduction of gin gave a new impetus to drunkenness. In the streets of London at one time gin-shops invited every passer-by to get drunk for a penny, or dead drunk for twopence.

In spite however of scenes such as this, England remained at heart religious. In the middle class the old Puritan spirit lived on unchanged, and it was from this class that a religious revival burst forth at the close of Walpole's administration, which changed after a time the whole tone of English society. The Church was restored to life and activity. Religion carried to the hearts of the people a fresh spirit of moral zeal, while it purified our literature and our manners. A new philanthropy reformed our prisons, infused clemency and wisdom into our penal laws, abolished the slave trade, and gave the first impulse to popular education. The revival began in a small knot of Oxford students, whose revolt against the religious deadness of their times showed itself in ascetic observances, an enthusiastic devotion, and a methodical regularity of life which gained them the nickname of "Methodists." Three figures detached themselves from the group as soon as, on its transfer to London in 1738, it attracted public attention by the fervor and even extravagance of its piety; and each found his special work in the task to which the instinct of the new movement led it from the first, that of carrying religion and morality to the vast masses of population which lay concentrated in the

towns, or around the mines and collieries of Cornwall and the north. Whitefield, a servitor of Pembroke College, was above all the preacher of the revival. Speech was governing English politics; and the religious power of speech was shown when a dread of "enthusiasm" closed against the new apostles the pulpits of the Established Church, and forced them to preach in the fields. Their voices were soon heard in the wildest and most barbarous corners of the land, among the bleak moors of Northumberland, or in the dens of London, or in the long galleries where in the pauses of his labor the Cornish miner listens to the sobbing of the sea. Whitefield's preaching was such as England had never heard before, theatrical, extravagant, often commonplace, but hushing all criticism by its intense reality, its earnestness of belief, its deep tremulous sympathy with the sin and sorrow of mankind. It was no common enthusiast who could wring gold from the close-fisted Franklin and admiration from the fastidious Horace Walpole, or who could look down from the top of a green knoll at Kingswood on twenty thousand colliers, grimy from the Bristol coal-pits, and see as he preached the tears "making white channels down their blackened cheeks." On the rough and ignorant masses to whom they spoke the effect of Whitefield and his fellow Methodists was mighty both for good and ill. Their preaching stirred a passionate hatred in their opponents. Their lives were often in danger, they were mobbed, they were ducked, they were stoned, they were smothered with filth. But the enthusiasm they aroused was equally passionate. Women fell down in convulsions; strong men were smitten suddenly to the earth; the preacher was interrupted by bursts of hysteric laughter or of hysteric sobbing. All the phenomena of strong spiritual excitement, so familiar now, but at that time strange and unknown, followed on their sermons; and the terrible sense of a conviction of sin, a new dread of hell, a new hope of heaven, took forms at once grotesque and sublime. Charles Wesley, a Christ Church student, came to add sweetness to this sudden and startling light. He was the "sweet singer" of the movement. His hymns expressed the fiery conviction of its converts in lines so chaste and beautiful that its more extravagant features disappeared. The wild throes of hysteric enthusiasm passed into a passion for hymn-singing, and a new musical impulse was aroused in

the people which gradually changed the face of public devotion throughout England.

But it was his elder brother, John Wesley, who embodied in himself not this or that side of the new movement, but the movement itself. Even at Oxford, where he resided as a fellow of Lincoln, he had been looked upon as head of the group of Methodists, and after his return from a quixotic mission to the Indians of Georgia he again took the lead of the little society, which had removed in the interval to London. In power as a preacher he stood next to Whitefield; as a hymn-writer he stood second to his brother Charles. But while combining in some degree the excellence of either, he possessed qualities in which both were utterly deficient; an indefatigable industry, a cool judgment, a command over others, a faculty of organization, a singular union of patience and moderation with an imperious ambition, which marked him as a ruler of men. He had besides a learning and skill in writing which no other of the Methodists possessed; he was older than any of his colleagues at the start of the movement, and he outlived them all. His life indeed almost covers the century, and the Methodist body had passed through every phase of its history before he sank into the grave at the age of eighty-eight. It would have been impossible for Wesley to have wielded the power he did had he not shared the follies and extravagance as well as the enthusiasm of his disciples. Throughout his life his asceticism was that of a monk. At times he lived on bread only, and he often slept on the bare boards. He lived in a world of wonders and divine interpositions. It was a miracle if the rain stopped and allowed him to set forward on a journey. It was a judgment of Heaven if a hail-storm burst over a town which had been deaf to his preaching. One day, he tells us, when he was tired and his horse fell lame, "I thought—cannot God heal either man or beast by any means or without any?—immediately my headache ceased and my horse's lameness in the same instant." With a still more childish fanaticism he guided his conduct, whether in ordinary events or in the great crises of his life, by drawing lots or watching the particular texts at which his Bible opened. But with all this extravagance and superstition, Wesley's mind was essentially practical, orderly, and conservative.

No man ever stood at the head of a great revolution whose temper was so anti-revolutionary. In his earlier days the bishops had been forced to rebuke him for the narrowness and intolerance of his churchmanship. When Whitefield began his sermons in the fields, Wesley "could not at first reconcile himself to that strange way." He condemned and fought against the admission of laymen as preachers till he found himself left with none but laymen to preach. To the last he clung passionately to the Church of England, and looked on the body he had formed as but a lay society in full communion with it. He broke with the Moravians, who had been the earliest friends of the new movement, when they endangered its safe conduct by their contempt of religious forms. He broke with Whitefield when the great preacher plunged into an extravagant Calvinism. But the same practical temper of mind which led him to reject what was unmeasured, and to be the last to adopt what was new, enabled him at once to grasp and organize the novelties he adopted. He became himself the most unwearied of field preachers, and his journal for half a century is little more than a record of fresh journeys and fresh sermons. When once driven to employ lay helpers in his ministry he made their work a new and attractive feature in his system. His earlier asceticism only lingered in a dread of social enjoyments and an aversion from the gayer and sunnier side of life which links the Methodist movement with that of the Puritans. As the fervor of his superstition died down into the calm of age, his cool common sense discouraged in his followers the enthusiastic outbursts which marked the opening of the revival. His powers were bent to the building up of a great religious society which might give to the new enthusiasm a lasting and practical form. The Methodists were grouped into classes, gathered in love-feasts, purified by the expulsion of unworthy members, and furnished with an alternation of settled ministers and wandering preachers; while the whole body was placed under the absolute government of a Conference of ministers. But so long as he lived, the direction of the new religious society remained with Wesley alone. "If by arbitrary power," he replied with charming simplicity to objectors, "you mean a power which I exercise simply without any colleagues therein, this is certainly true, but I see no hurt in it."

The great body which he thus founded numbered a hundred thousand members at his death, and now counts its members in England and America by millions. But the Methodists themselves were the least result of the Methodist revival. Its action upon the Church broke the lethargy of the clergy; and the "Evangelical" movement, which found representatives like Newton and Cecil within the pale of the Establishment, made the fox-hunting parson and the absentee rector at last impossible. In Walpole's day the English clergy were the idlest and most lifeless in the world. In our own time no body of religious ministers surpasses them in piety, in philanthropic energy, or in popular regard. In the nation at large appeared a new moral enthusiasm which, rigid and pedantic as it often seemed, was still healthy in its social tone, and whose power was seen in the disappearance of the profligacy which had disgraced the upper classes, and the foulness which had infested literature, ever since the Restoration. A yet nobler result of the religious revival was the steady attempt, which has never ceased from that day to this, to remedy the guilt, the ignorance, the physical suffering, the social degradation of the profligate and the poor. It was not till the Wesleyan impulse had done its work that this philanthropic impulse began. The Sunday Schools established by Mr. Raikes of Gloucester at the close of the century were the beginnings of popular education. By writings and by her own personal example Hannah More drew the sympathy of England to the poverty and crime of the agricultural laborer. A passionate impulse of human sympathy with the wronged and afflicted raised hospitals, endowed charities, built churches, sent missionaries to the heathen, supported Burke in his plea for the Hindoo, and Clarkson and Wilberforce in their crusade against the iniquity of the slave-trade. It is only the moral chivalry of his labors that amongst a crowd of philanthropists draws us most, perhaps, to the work and character of John Howard. The sympathy which all were feeling for the sufferings of mankind he felt for the sufferings of the worst and most hapless of men. With wonderful ardor and perseverance he devoted himself to the cause of the debtor, the felon, and the murderer. An appointment to the office of High Sheriff of Bedfordshire in 1774 drew his attention to the state of the prisons which were placed under his care; and from that

time the quiet country gentleman, whose only occupation had been reading his Bible and studying his thermometer, became the most energetic and zealous of reformers. Before a year was over he had personally visited almost every English gaol, and he found in nearly all of them frightful abuses which had been noticed half a century before, but left unredressed by Parliament. Gaolers who bought their places were paid by fees, and suffered to extort what they could. Even when acquitted, men were dragged back to their cells for want of funds to discharge the sums they owed to their keepers. Debtors and felons were huddled together in the prisons which Howard found crowded by the cruel legislation of the day. No separation was preserved between different sexes, no criminal discipline enforced. Every gaol was a chaos of cruelty and the foulest immorality, from which the prisoner could only escape by sheer starvation, or through the gaol-fever that festered without ceasing in these haunts of wretchedness. Howard saw everything with his own eyes, he tested every suffering by his own experience. In one gaol he found a cell so narrow and noisome that the poor wretch who inhabited it begged as a mercy for hanging. Howard shut himself up in the cell and bore its darkness and foulness till nature could bear no more. It was by work of this sort, and by the faithful pictures of such scenes which it enabled him to give, that he brought about their reform. The book in which he recorded his terrible experience, and the plans which he submitted for the reformation of criminals made him the father, so far as England is concerned, of prison discipline. But his labors were far from being confined to England. In journey after journey he visited the gaols of Holland and Germany, till his longing to discover some means of checking the fatal progress of the plague led him to examine the lazarettos of Europe and the East. He was still engaged in this work of charity when he was seized by a malignant fever at Cherson in Southern Russia, and "laid quietly in the earth," as he desired.

While the revival of the Wesleys was stirring the very heart of England, its political stagnation was unbroken. The fall of Walpole made no change in English policy, at home or abroad. The bulk of his ministry, who had opposed him in his later years of office, resumed their posts, simply admitting

some of the more prominent members of opposition, and giving the control of foreign affairs to Lord Carteret, a man of great power, and skilled in continental affairs. Carteret mainly followed the system of his predecessor. It was in the union of Austria and Prussia that he looked for the means of destroying the hold France had now established in Germany by the election of her puppet, Charles of Bavaria, as Emperor; and the pressure of England, aided by a victory of Frederick at Chotusitz, forced Maria Theresa to consent to Walpole's plan of a peace with Prussia at Breslau on the terms of the cession of Silesia. The peace enabled the Austrian army to drive the French from Bohemia at the close of 1742; an English fleet blockaded Cadiz, and another anchored in the bay of Naples and forced Don Carlos by a threat of bombarding his capital to conclude a treaty of neutrality, while English subsidies detached Sardinia from the French alliance. Unfortunately Carteret and the Court of Vienna now determined not only to set up the Pragmatic Sanction, but to undo the French encroachments of 1736. Naples and Sicily were to be taken back from their Spanish King, Elsass and Lorraine from France; and the imperial dignity was to be restored to the Austrian House. To carry out these schemes an Austrian army drove the Emperor from Bavaria in the spring of 1743; while George the Second, who warmly supported Carteret's policy, put himself at the head of a force of 40,000 men, the bulk of whom were English and Hanoverians, and marched from the Netherlands to the Main. His advance was checked and finally turned into a retreat by the Duc de Noailles, who appeared with a superior army on the south bank of the river, and finally throwing 31,000 men across it, threatened to compel the King to surrender. In the battle of Dettingen which followed, however, not only was the allied army saved from destruction by the impetuosity of the French horse and the dogged obstinacy with which the English held their ground, but their opponents were forced to recross the Main. Small as was the victory, it produced amazing results. The French evacuated Germany. The English and Austrian armies appeared on the Rhine; and a league between England, Prussia, and the Queen of Hungary seemed all that was needed to secure the results already gained.

But the prospect of peace was overthrown by the ambition

of the House of Austria. In the spring of 1744 an Austrian army marched upon Naples, with the purpose of transferring it after its conquest to the Bavarian Emperor, whose hereditary dominions in Bavaria were to pass in return to Maria Theresa. If however Frederick had withdrawn from the war on the cession of Silesia, he was resolute to take up arms again rather than suffer so great an aggrandizement of the House of Austria in Germany. His sudden alliance with France failed at first to change the course of the war; for though he was successful in seizing Prague and drawing the Austrian army from the Rhine, Frederick was driven from Bohemia, while the death of the Emperor forced Bavaria to lay down its arms and to ally itself with Maria Theresa. So high were the Queen's hopes at this moment that she formed a secret alliance with Russia for the division of the Prussian monarchy. But in 1745 the tide turned, and the fatal results of Carteret's weakness in assenting to the change from a war of defence into one of attack became manifest. The French King, Louis the Fifteenth, led an army into the Netherlands; and the refusal of Holland to act against him left their defence wholly in the hands of England. The general anger at this widening of the war proved fatal to Carteret, or, as he now became, Earl Granville. His imperious temper had rendered him odious to his colleagues, and he was driven from office by the Duke of Newcastle and his brother Henry Pelham. Of the reconstituted ministry which followed Henry Pelham became the head. His temper, as well as a consciousness of his own mediocrity, disposed him to a policy of conciliation which reunited the Whigs. Chesterfield and the Whigs in opposition, with Pitt and "the Boys," all found room in the new administration; and even a few Tories found admittance. The bulk of the Whigs were true to Walpole's policy; and it was to pave the way to an accommodation with Frederick and a close of the war that the Pelhams forced Carteret to resign. But their attention had first to be given to the war in Flanders, where Marshal Saxe had established the superiority of the French army by his defeat of the Duke of Cumberland. Advancing to the relief of Tournay with a force of English, Hanoverians, and Dutch—for Holland had at last been dragged into the war—the Duke on the 31st of May, 1745, found the French covered by a line of fortified

villages and redoubts with but a single narrow gap near the hamlet of Fontenoy. Into this gap, however, the English troops, formed in a dense column, doggedly thrust themselves in spite of a terrible fire; but at the moment when the day seemed won the French guns, rapidly concentrated in their front, tore the column in pieces and drove it back in a slow and orderly retreat. The blow was quickly followed up in June by a victory of Frederick at Hohenfriedburg which drove the Austrians from Silesia, and by a landing of a Stuart on the coast of Scotland at the close of July.

The war with France had at once revived the hopes of the Jacobites; and as early as 1744 Charles Edward, the grandson of James the Second, was placed by the French Government at the head of a formidable armament. But his plan of a descent on Scotland was defeated by a storm which wrecked his fleet, and by the march of the French troops which had sailed in it to the war in Flanders. In 1745, however, the young adventurer again embarked with but seven friends in a small vessel and landed on a little island of the Hebrides. For three weeks he stood almost alone; but on the 29th of August the clans rallied to his standard in Glenfinnan, and Charles found himself at the head of fifteen hundred men. His force swelled to an army as he marched through Blair Athol on Perth, entered Edinburgh in triumph, and proclaimed himself "James the Eighth" at the Town Cross: and two thousand English troops who marched against him under Sir John Cope were broken and cut to pieces on the 21st of September by a single charge of the clansmen at Preston Pans. Victory at once doubled the forces of the conqueror. The Prince was now at the head of six thousand men; but all were still Highlanders, for the people of the Lowlands held aloof from his standard, and it was with the utmost difficulty that he could induce them to follow him to the south. His tact and energy however at last conquered every obstacle, and after skilfully evading an army gathered at Newcastle he marched through Lancashire, and pushed on the 4th of December as far as Derby. But here all hope of success came to an end. Hardly a man had risen in his support as he passed through the districts where Jacobitism boasted of its strength. The people flocked to see his march as if to see a show. Catholics and Tories abounded in Lancashire, but only a single squire took

up arms. Manchester was looked on as the most Jacobite of English towns, but all the aid it gave was an illumination and two thousand pounds. From Carlisle to Derby he had been joined by hardly two hundred men. The policy of Walpole had in fact secured England for the House of Hanover. The long peace, the prosperity of the country, and the clemency of the Government, had done their work. The recent admission of Tories into the administration had severed the Tory party finally from the mere Jacobites. Jacobitism as a fighting force was dead, and even Charles Edward saw that it was hopeless to conquer England with five thousand Highlanders. He soon learned too that forces of double his own strength were closing on either side of him, while a third army under the King and Lord Stair covered London. Scotland itself, now that the Highlanders were away, quietly renewed in all the districts of the Lowlands its allegiance to the House of Hanover. Even in the Highlands the Macleods rose in arms for King George, while the Gordons refused to stir, though roused by a small French force which landed at Montrose. To advance further south was impossible, and Charles fell rapidly back on Glasgow; but the reinforcements which he found there raised his army to nine thousand men, and on the 23rd of January, 1746, he boldly attacked an English army under General Hawley which had followed his retreat and had encamped near Falkirk. Again the wild charge of his Highlanders won victory for the Prince, but victory was as fatal as defeat. The bulk of his forces dispersed with their booty to the mountains, and Charles fell sullenly back to the north before the Duke of Cumberland. On the 16th of April the armies faced one another on Culloden Moor, a few miles eastward of Inverness. The Highlanders still numbered six thousand men, but they were starving and dispirited, while Cumberland's force was nearly double that of the Prince. Torn by the Duke's guns, the clansmen flung themselves in their old fashion on the English front; but they were received with a terrible fire of musketry, and the few that broke through the first line found themselves fronted by a second. In a few moments all was over, and the Stuart force was a mass of hunted fugitives. Charles himself after strange adventures escaped to France. In England fifty of his followers were hanged; three Scotch lords, Lovat, Balmerino, and Kilmarnock, brought to the block;

and forty persons of rank attained by Act of Parliament. More extensive measures of repression were needful in the Highlands. The feudal tenures were abolished. The hereditary jurisdictions of the chiefs were bought up and transferred to the Crown. The tartan, or garb of the Highlanders, was forbidden by law. These measures, followed by a general Act of Indemnity, proved effective for their purpose. The dread of the clansmen passed away, and the Sheriff's writ soon ran through the Highlands with as little resistance as in the streets of Edinburgh.

Defeat abroad and danger at home only quickened the resolve of the Pelhams to bring the war with Prussia to an end. When England was threatened by a Catholic Pretender, it was no time for weakening the chief Protestant power in Germany. On the refusal of Maria Theresa to join in a general peace, England concluded the Convention of Hanover with Prussia, and withdrew so far as Germany was concerned from the war. Elsewhere however the contest lingered on. The victories of Maria Theresa in Italy were balanced by those of France in the Netherlands, where Marshal Saxe inflicted new defeats on the English and Dutch at Roucoux and Laufeld. The danger of Holland and the financial exhaustion of France at last brought about the conclusion of a peace at Aix-la-Chapelle, by which England surrendered its gains at sea, and France its conquests on land. But the peace was a mere pause in the struggle, during which both parties hoped to gain strength for a mightier contest which they saw impending. The war was in fact widening far beyond the bounds of Germany or of Europe. It was becoming a world-wide duel which was to settle the destinies of mankind. Already France was claiming the valleys of the Ohio and the Mississippi, and mooted the great question whether the fortunes of the New World were to be moulded by Frenchmen or Englishmen. Already two French adventurers were driving English merchants from Madras, and building up, as they trusted, a power which was to add India to the dominions of France.

The early intercourse of England with India gave little promise of the great fortunes which awaited it. It was not till the close of Elizabeth's reign, a century after Vasco da Gama had crept round the Cape of Good Hope and founded the Portuguese settlement on the Goa coast, that an East India

Company was established in London. The trade, profitable as it was, remained small in extent; and the three early factories of the Company were only gradually acquired during the century which followed. The first, that of Madras, consisted of but six fishermen's houses beneath Fort St. George; that of Bombay was ceded by the Portuguese as part of the dowry of Catharine of Braganza; while Fort William, with the mean village which has since grown into Calcutta, owes its origin to the reign of William the Third. Each of these forts was built simply for the protection of the Company's warehouses, and guarded by a few "sepahis," sepoys, or paid native soldiers; while the clerks and traders of each establishment were under the direction of a President and a Council. One of these clerks in the middle of the eighteenth century was Robert Clive, the son of a small proprietor near Market Drayton in Shropshire, an idle dare-devil of a boy whom his friends had been glad to get rid of by packing him off in the Company's service as a writer to Madras. His early days there were days of wretchedness and despair. He was poor and cut off from his fellows by the haughty shyness of his temper, weary of desk-work, and haunted by home-sickness. Twice he attempted suicide; and it was only on the failure of his second attempt that he flung down the pistol which baffled him with a conviction that he was reserved for higher things.

A change came at last in the shape of war and captivity. As soon as the war of the Austrian Succession broke out, the superiority of the French in power and influence tempted them to expel the English from India. Labourdonnais, the governor of the French colony of the Mauritius, besieged Madras, razed it to the ground, and carried its clerks and merchants prisoners to Pondicherry. Clive was among these captives, but he escaped in disguise, and returning to the settlement, threw aside his clerkship for an ensign's commission in the force which the Company was busily raising. For the capture of Madras had not only established the repute of the French arms, but had roused Dupleix, the governor of Pondicherry, to conceive plans for the creation of a French empire in India. When the English merchants of Elizabeth's day brought their goods to Surat, all India, save the south, had just been brought for the first time under the rule of a

single great power by the Mogul Emperors of the line of Akbar. But with the death of Aurungzebe, in the reign of Anne, the Mogul Empire fell fast into decay. A line of feudal princes raised themselves to independence in Rajpootana. The lieutenants of the Emperor founded separate sovereignties at Lucknow and Hyderabad, in the Carnatic, and in Bengal. The plain of the Upper Indus was occupied by a race of religious fanatics called the Sikhs. Persian and Afghan invaders crossed the Indus, and succeeded even in sacking Delhi, the capital of the Moguls. Clans of systematic plunderers, who were known under the name of Mahrattas, and who were in fact the natives whom conquest had long held in subjection, poured down from the highlands along the western coast, ravaged as far as Calcutta and Tanjore, and finally set up independent states at Poonah and Gwalior. Dupleix skilfully availed himself of the disorder around him. He offered his aid to the Emperor against the rebels and invaders who had reduced his power to a shadow; and it was in the Emperor's name that he meddled with the quarrels of the states of Central and Southern India, made himself virtually master of the Court of Hyderabad, and seated a creature of his own on the throne of the Carnatic. Trichinopoly, the one town which held out against this Nabob of the Carnatic, was all but brought to surrender when Clive, in 1751, came forward with a daring scheme for its relief. With a few hundred English and sepoys he pushed through a thunderstorm to the surprise of Arcot, the Nabob's capital, entrenched himself in its enormous fort, and held it for fifty days against thousands of assailants. Moved by his gallantry, the Mahrattas, who had never believed that Englishmen would fight before, advanced and broke up the siege; but Clive was no sooner freed than he showed equal vigor in the field. At the head of raw recruits who ran away at the first sound of a gun, and sepoys who hid themselves as soon as the cannon opened fire, he twice attacked and defeated the French and their Indian allies, foiled every effort of Dupleix, and razed to the ground a pompous pillar which the French governor had set up in honor of his earlier victories.

Clive was recalled by broken health to England, and the fortunes of the struggle in India were left for decision to a later day. But while France was struggling for the Empire

of the East she was striving with even more apparent success for the command of the new world of the West. Populous as they had become, the English settlements in America still lay mainly along the sea-board of the Atlantic; for only a few exploring parties had penetrated into the Alleghanies before the Seven Years' War; and Indian tribes wandered unquestioned along the lakes. It was not till the peace of Aix-la-Chapelle that the pretensions of France drew the eyes of the colonists and of English statesmen to the interior of the Western Continent. Planted firmly in Louisiana and Canada, France openly claimed the whole country west of the Alleghanies as its own, and its governors now ordered all English settlers or merchants to be driven from the valleys of Ohio or Mississippi which were still in the hands of Indian tribes. Even the inactive Pelham revolted from pretensions such as these. The original French settlers were driven from Acadia or Nova Scotia, and an English colony founded the settlement of Halifax. An Ohio Company was formed, and its agents made their way to the valleys of that river and the Kentucky; while envoys from Virginia and Pennsylvania drew closer the alliance between their colonies and the Indian tribes across the mountains. Nor were the French slow to accept the challenge. Fighting began in Acadia. A vessel of war appeared in Ontario, and Niagara was turned into a fort. A force of 1,200 men despatched to Erie drove the few English settlers from their little colony on the fork of the Ohio, and founded there a fort called Duquesne, on the site of the later Pittsburgh. The fort at once gave this force command of the river valley. After a fruitless attack on it, under George Washington, a young Virginian, the colonists were forced to withdraw over the mountains, and the whole of the west was left in the hands of France. The bulk of the Indian tribes from Canada as far as the Mississippi attached themselves to the French cause, and the value of their aid was shown in 1755, when General Braddock led a force of English soldiers and American militia to an attack upon Fort Duquesne. The force was utterly routed and Braddock slain. The Marquis of Montcalm, who in 1756 commanded the French forces in Canada, was gifted with singular powers of administration. He carried out with even more zeal than his predecessor the plans of annexation; and the three forts of Duquesne on the Ohio, of Niagara on

A SHORT HISTORY OF THE ENGLISH PEOPLE

CHAPTER X.

MODERN ENGLAND.

Section I.—William Pitt, 1742—1762.*

THE fall of Walpole revealed a change in the temper of England which was to influence from that time to this its social and political history. New forces, new cravings, new aims, which had been silently gathering beneath the crust of inaction, began at last to tell on the national life. The stir showed itself markedly in a religious revival which dates from the later years of Walpole's ministry. Never had religion seemed at a lower ebb. The progress of free inquiry, the aversion from theological strife which had been left by the Civil Wars, the new political and material channels opened to human energy, had produced a general indifference to all questions of religious speculation or religious life. The Church, predominant as its influence seemed at the close of the Revolution, had sunk into political insignificance. The bishops, who were now chosen exclusively from among the smaller number of Whig ecclesiastics, were left politically powerless by the estrangement and hatred of their clergy;

* *Authorities.*—Lord Stanhope and Horace Walpole, as before. Southey's biography, or the more elaborate life by Mr. Tyerman, gives an account of Wesley. For Pitt himself, the Chatham correspondence, his life by Thackeray, and Lord Macaulay's two essays on him. The Annual Register begins with 1758; its earlier portion has been attributed to Burke. Carlyle's "Frederick the Great" gives a picturesque account of the Seven Years' War. For Clive, see the biography by Sir John Malcolm, and Lord Macaulay's essay.

while the clergy themselves, drawn by their secret tendencies to Jacobitism, stood sulkily apart from any active interference with public affairs. The prudence of the Whig statesmen aided to maintain this ecclesiastical immobility. They were careful to avoid all that could rouse into life the slumbering forces of bigotry and fanaticism. When the Dissenters pressed for a repeal of the Test and Corporation Acts, Walpole openly avowed his dread of awaking the passions of religious hate by such a measure, and satisfied them by an annual act of indemnity for any breach of these penal statutes; while a suspension of the meetings of Convocation deprived the clergy of their natural centre of agitation and opposition. Nor was this political inaction compensated by any religious activity. A large number of prelates were mere Whig partisans with no higher aim than that of promotion. The levees of the Ministers were crowded with lawn sleeves. A Welsh bishop avowed that he had seen his diocese but once, and habitually resided at the lakes of Westmoreland. The system of pluralities turned the wealthier and more learned of the priesthood into absentees, while the bulk of them were indolent, poor, and without social consideration. A shrewd, if prejudiced, observer brands the English clergy of the day as the most lifeless in Europe, "the most remiss of their labors in private, and the least severe in their lives." There was a revolt against religion and against churches in both the extremes of English society. In the higher circles of society "every one laughs," said Montesquieu on his visit to England, "if one talks of religion." Of the prominent statesmen of the time the greater part were unbelievers in any form of Christianity, and distinguished for the grossness and immorality of their lives. Drunkenness and foul talk were thought no discredit to Walpole. A later prime minister, the Duke of Grafton, was in the habit of appearing with his mistress at the play. Purity and fidelity to the marriage vow were sneered out of fashion; and Lord Chesterfield, in his letters to his son, instructs him in the art of seduction as part of a polite education. At the other end of the social scale lay the masses of the poor. They were ignorant and brutal to a degree which it is hard to conceive, for the increase of population which followed on the growth of towns and the development of commerce had been met by no effort for their religious or educational improve-

ment. Not a new parish had been created. Schools there were none, save the grammar schools of Edward and Elizabeth, and some newly established "circulating schools" in Wales, for religious education. The rural peasantry, who were fast being reduced to pauperism by the abuse of the poor-laws, were left without much moral or religious training of any sort. "We saw but one Bible in the parish of Cheddar," said Hannah More at a far later time, "and that was used to prop a flower-pot." Within the towns things were worse. There was no effective police; and in great outbreaks the mob of London or Birmingham burnt houses, flung open prisons, and sacked and pillaged at their will. The criminal class gathered boldness and numbers in the face of ruthless laws which only testified to the terror of society, laws which made it a capital crime to cut down a cherry tree, and which strung up twenty young thieves of a morning in front of Newgate; while the introduction of gin gave a new impetus to drunkenness. In the streets of London at one time gin-shops invited every passer-by to get drunk for a penny, or dead drunk for twopence.

In spite however of scenes such as this, England remained at heart religious. In the middle class the old Puritan spirit lived on unchanged, and it was from this class that a religious revival burst forth at the close of Walpole's administration, which changed after a time the whole tone of English society. The Church was restored to life and activity. Religion carried to the hearts of the people a fresh spirit of moral zeal, while it purified our literature and our manners. A new philanthropy reformed our prisons, infused clemency and wisdom into our penal laws, abolished the slave trade, and gave the first impulse to popular education. The revival began in a small knot of Oxford students, whose revolt against the religious deadness of their times showed itself in ascetic observances, an enthusiastic devotion, and a methodical regularity of life which gained them the nickname of "Methodists." Three figures detached themselves from the group as soon as, on its transfer to London in 1738, it attracted public attention by the fervor and even extravagance of its piety; and each found his special work in the task to which the instinct of the new movement led it from the first, that of carrying religion and morality to the vast masses of population which lay concentrated in the

towns, or around the mines and collieries of Cornwall and the north. Whitefield, a servitor of Pembroke College, was above all the preacher of the revival. Speech was governing English politics; and the religious power of speech was shown when a dread of "enthusiasm" closed against the new apostles the pulpits of the Established Church, and forced them to preach in the fields. Their voices were soon heard in the wildest and most barbarous corners of the land, among the bleak moors of Northumberland, or in the dens of London, or in the long galleries where in the pauses of his labor the Cornish miner listens to the sobbing of the sea. Whitefield's preaching was such as England had never heard before, theatrical, extravagant, often commonplace, but hushing all criticism by its intense reality, its earnestness of belief, its deep tremulous sympathy with the sin and sorrow of mankind. It was no common enthusiast who could wring gold from the close-fisted Franklin and admiration from the fastidious Horace Walpole, or who could look down from the top of a green knoll at Kingswood on twenty thousand colliers, grimy from the Bristol coal-pits, and see as he preached the tears "making white channels down their blackened cheeks." On the rough and ignorant masses to whom they spoke the effect of Whitefield and his fellow Methodists was mighty both for good and ill. Their preaching stirred a passionate hatred in their opponents. Their lives were often in danger, they were mobbed, they were ducked, they were stoned, they were smothered with filth. But the enthusiasm they aroused was equally passionate. Women fell down in convulsions; strong men were smitten suddenly to the earth; the preacher was interrupted by bursts of hysteric laughter or of hysteric sobbing. All the phenomena of strong spiritual excitement, so familiar now, but at that time strange and unknown, followed on their sermons; and the terrible sense of a conviction of sin, a new dread of hell, a new hope of heaven, took forms at once grotesque and sublime. Charles Wesley, a Christ Church student, came to add sweetness to this sudden and startling light. He was the "sweet singer" of the movement. His hymns expressed the fiery conviction of its converts in lines so chaste and beautiful that its more extravagant features disappeared. The wild throes of hysteric enthusiasm passed into a passion for hymn-singing, and a new musical impulse was aroused in

the people which gradually changed the face of public devotion throughout England.

But it was his elder brother, John Wesley, who embodied in himself not this or that side of the new movement, but the movement itself. Even at Oxford, where he resided as a fellow of Lincoln, he had been looked upon as head of the group of Methodists, and after his return from a quixotic mission to the Indians of Georgia he again took the lead of the little society, which had removed in the interval to London. In power as a preacher he stood next to Whitefield; as a hymn-writer he stood second to his brother Charles. But while combining in some degree the excellence of either, he possessed qualities in which both were utterly deficient; an indefatigable industry, a cool judgment, a command over others, a faculty of organization, a singular union of patience and moderation with an imperious ambition, which marked him as a ruler of men. He had besides a learning and skill in writing which no other of the Methodists possessed; he was older than any of his colleagues at the start of the movement, and he outlived them all. His life indeed almost covers the century, and the Methodist body had passed through every phase of its history before he sank into the grave at the age of eighty-eight. It would have been impossible for Wesley to have wielded the power he did had he not shared the follies and extravagance as well as the enthusiasm of his disciples. Throughout his life his asceticism was that of a monk. At times he lived on bread only, and he often slept on the bare boards. He lived in a world of wonders and divine interpositions. It was a miracle if the rain stopped and allowed him to set forward on a journey. It was a judgment of Heaven if a hail-storm burst over a town which had been deaf to his preaching. One day, he tells us, when he was tired and his horse fell lame, "I thought—cannot God heal either man or beast by any means or without any?—immediately my headache ceased and my horse's lameness in the same instant." With a still more childish fanaticism he guided his conduct, whether in ordinary events or in the great crises of his life, by drawing lots or watching the particular texts at which his Bible opened. But with all this extravagance and superstition, Wesley's mind was essentially practical, orderly, and conservative.

No man ever stood at the head of a great revolution whose temper was so anti-revolutionary. In his earlier days the bishops had been forced to rebuke him for the narrowness and intolerance of his churchmanship. When Whitefield began his sermons in the fields, Wesley "could not at first reconcile himself to that strange way." He condemned and fought against the admission of laymen as preachers till he found himself left with none but laymen to preach. To the last he clung passionately to the Church of England, and looked on the body he had formed as but a lay society in full communion with it. He broke with the Moravians, who had been the earliest friends of the new movement, when they endangered its safe conduct by their contempt of religious forms. He broke with Whitefield when the great preacher plunged into an extravagant Calvinism. But the same practical temper of mind which led him to reject what was unmeasured, and to be the last to adopt what was new, enabled him at once to grasp and organize the novelties he adopted. He became himself the most unwearied of field preachers, and his journal for half a century is little more than a record of fresh journeys and fresh sermons. When once driven to employ lay helpers in his ministry he made their work a new and attractive feature in his system. His earlier asceticism only lingered in a dread of social enjoyments and an aversion from the gayer and sunnier side of life which links the Methodist movement with that of the Puritans. As the fervor of his superstition died down into the calm of age, his cool common sense discouraged in his followers the enthusiastic outbursts which marked the opening of the revival. His powers were bent to the building up of a great religious society which might give to the new enthusiasm a lasting and practical form. The Methodists were grouped into classes, gathered in love-feasts, purified by the expulsion of unworthy members, and furnished with an alternation of settled ministers and wandering preachers; while the whole body was placed under the absolute government of a Conference of ministers. But so long as he lived, the direction of the new religious society remained with Wesley alone. "If by arbitrary power," he replied with charming simplicity to objectors, "you mean a power which I exercise simply without any colleagues therein, this is certainly true, but I see no hurt in it."

The great body which he thus founded numbered a hundred thousand members at his death, and now counts its members in England and America by millions. But the Methodists themselves were the least result of the Methodist revival. Its action upon the Church broke the lethargy of the clergy; and the "Evangelical" movement, which found representatives like Newton and Cecil within the pale of the Establishment, made the fox-hunting parson and the absentee rector at last impossible. In Walpole's day the English clergy were the idlest and most lifeless in the world. In our own time no body of religious ministers surpasses them in piety, in philanthropic energy, or in popular regard. In the nation at large appeared a new moral enthusiasm which, rigid and pedantic as it often seemed, was still healthy in its social tone, and whose power was seen in the disappearance of the profligacy which had disgraced the upper classes, and the foulness which had infested literature, ever since the Restoration. A yet nobler result of the religious revival was the steady attempt, which has never ceased from that day to this, to remedy the guilt, the ignorance, the physical suffering, the social degradation of the profligate and the poor. It was not till the Wesleyan impulse had done its work that this philanthropic impulse began. The Sunday Schools established by Mr. Raikes of Gloucester at the close of the century were the beginnings of popular education. By writings and by her own personal example Hannah More drew the sympathy of England to the poverty and crime of the agricultural laborer. A passionate impulse of human sympathy with the wronged and afflicted raised hospitals, endowed charities, built churches, sent missionaries to the heathen, supported Burke in his plea for the Hindoo, and Clarkson and Wilberforce in their crusade against the iniquity of the slave-trade. It is only the moral chivalry of his labors that amongst a crowd of philanthropists draws us most, perhaps, to the work and character of John Howard. The sympathy which all were feeling for the sufferings of mankind he felt for the sufferings of the worst and most hapless of men. With wonderful ardor and perseverance he devoted himself to the cause of the debtor, the felon, and the murderer. An appointment to the office of High Sheriff of Bedfordshire in 1774 drew his attention to the state of the prisons which were placed under his care; and from that

of the House of Austria. In the spring of 1744 an Austrian army marched upon Naples, with the purpose of transferring it after its conquest to the Bavarian Emperor, whose hereditary dominions in Bavaria were to pass in return to Maria Theresa. If however Frederick had withdrawn from the war on the cession of Silesia, he was resolute to take up arms again rather than suffer so great an aggrandizement of the House of Austria in Germany. His sudden alliance with France failed at first to change the course of the war; for though he was successful in seizing Prague and drawing the Austrian army from the Rhine, Frederick was driven from Bohemia, while the death of the Emperor forced Bavaria to lay down its arms and to ally itself with Maria Theresa. So high were the Queen's hopes at this moment that she formed a secret alliance with Russia for the division of the Prussian monarchy. But in 1745 the tide turned, and the fatal results of Carteret's weakness in assenting to the change from a war of defence into one of attack became manifest. The French King, Louis the Fifteenth, led an army into the Netherlands; and the refusal of Holland to act against him left their defence wholly in the hands of England. The general anger at this widening of the war proved fatal to Carteret, or, as he now became, Earl Granville. His imperious temper had rendered him odious to his colleagues, and he was driven from office by the Duke of Newcastle and his brother Henry Pelham. Of the reconstituted ministry which followed Henry Pelham became the head. His temper, as well as a consciousness of his own mediocrity, disposed him to a policy of conciliation which reunited the Whigs. Chesterfield and the Whigs in opposition, with Pitt and "the Boys," all found room in the new administration; and even a few Tories found admittance. The bulk of the Whigs were true to Walpole's policy; and it was to pave the way to an accommodation with Frederick and a close of the war that the Pelhams forced Carteret to resign. But their attention had first to be given to the war in Flanders, where Marshal Saxe had established the superiority of the French army by his defeat of the Duke of Cumberland. Advancing to the relief of Tournay with a force of English, Hanoverians, and Dutch—for Holland had at last been dragged into the war—the Duke on the 31st of May, 1745, found the French covered by a line of fortified

villages and redoubts with but a single narrow gap near the hamlet of Fontenoy. Into this gap, however, the English troops, formed in a dense column, doggedly thrust themselves in spite of a terrible fire; but at the moment when the day seemed won the French guns, rapidly concentrated in their front, tore the column in pieces and drove it back in a slow and orderly retreat. The blow was quickly followed up in June by a victory of Frederick at Hohenfriedburg which drove the Austrians from Silesia, and by a landing of a Stuart on the coast of Scotland at the close of July.

The war with France had at once revived the hopes of the Jacobites; and as early as 1744 Charles Edward, the grandson of James the Second, was placed by the French Government at the head of a formidable armament. But his plan of a descent on Scotland was defeated by a storm which wrecked his fleet, and by the march of the French troops which had sailed in it to the war in Flanders. In 1745, however, the young adventurer again embarked with but seven friends in a small vessel and landed on a little island of the Hebrides. For three weeks he stood almost alone; but on the 29th of August the clans rallied to his standard in Glenfinnan, and Charles found himself at the head of fifteen hundred men. His force swelled to an army as he marched through Blair Athol on Perth, entered Edinburgh in triumph, and proclaimed himself "James the Eighth" at the Town Cross: and two thousand English troops who marched against him under Sir John Cope were broken and cut to pieces on the 21st of September by a single charge of the clansmen at Preston Pans. Victory at once doubled the forces of the conqueror. The Prince was now at the head of six thousand men; but all were still Highlanders, for the people of the Lowlands held aloof from his standard, and it was with the utmost difficulty that he could induce them to follow him to the south. His tact and energy however at last conquered every obstacle, and after skilfully evading an army gathered at Newcastle he marched through Lancashire, and pushed on the 4th of December as far as Derby. But here all hope of success came to an end. Hardly a man had risen in his support as he passed through the districts where Jacobitism boasted of its strength. The people flocked to see his march as if to see a show. Catholics and Tories abounded in Lancashire, but only a single squire took

up arms. Manchester was looked on as the most Jacobite of English towns, but all the aid it gave was an illumination and two thousand pounds. From Carlisle to Derby he had been joined by hardly two hundred men. The policy of Walpole had in fact secured England for the House of Hanover. The long peace, the prosperity of the country, and the clemency of the Government, had done their work. The recent admission of Tories into the administration had severed the Tory party finally from the mere Jacobites. Jacobitism as a fighting force was dead, and even Charles Edward saw that it was hopeless to conquer England with five thousand Highlanders. He soon learned too that forces of double his own strength were closing on either side of him, while a third army under the King and Lord Stair covered London. Scotland itself, now that the Highlanders were away, quietly renewed in all the districts of the Lowlands its allegiance to the House of Hanover. Even in the Highlands the Macleods rose in arms for King George, while the Gordons refused to stir, though roused by a small French force which landed at Montrose. To advance further south was impossible, and Charles fell rapidly back on Glasgow; but the reinforcements which he found there raised his army to nine thousand men, and on the 23rd of January, 1746, he boldly attacked an English army under General Hawley which had followed his retreat and had encamped near Falkirk. Again the wild charge of his Highlanders won victory for the Prince, but victory was as fatal as defeat. The bulk of his forces dispersed with their booty to the mountains, and Charles fell sullenly back to the north before the Duke of Cumberland. On the 16th of April the armies faced one another on Culloden Moor, a few miles eastward of Inverness. The Highlanders still numbered six thousand men, but they were starving and dispirited, while Cumberland's force was nearly double that of the Prince. Torn by the Duke's guns, the clansmen flung themselves in their old fashion on the English front; but they were received with a terrible fire of musketry, and the few that broke through the first line found themselves fronted by a second. In a few moments all was over, and the Stuart force was a mass of hunted fugitives. Charles himself after strange adventures escaped to France. In England fifty of his followers were hanged; three Scotch lords, Lovat, Balmerino, and Kilmarnock, brought to the block;

and forty persons of rank attainted by Act of Parliament. More extensive measures of repression were needful in the Highlands. The feudal tenures were abolished. The hereditary jurisdictions of the chiefs were bought up and transferred to the Crown. The tartan, or garb of the Highlanders, was forbidden by law. These measures, followed by a general Act of Indemnity, proved effective for their purpose. The dread of the clansmen passed away, and the Sheriff's writ soon ran through the Highlands with as little resistance as in the streets of Edinburgh.

Defeat abroad and danger at home only quickened the resolve of the Pelhams to bring the war with Prussia to an end. When England was threatened by a Catholic Pretender, it was no time for weakening the chief Protestant power in Germany. On the refusal of Maria Theresa to join in a general peace, England concluded the Convention of Hanover with Prussia, and withdrew, so far as Germany was concerned from the war. Elsewhere however the contest lingered on. The victories of Maria Theresa in Italy were balanced by those of France in the Netherlands, where Marshal Saxe inflicted new defeats on the English and Dutch at Roucoux and Laufeld. The danger of Holland and the financial exhaustion of France at last brought about the conclusion of a peace at Aix-la-Chapelle, by which England surrendered its gains at sea, and France its conquests on land. But the peace was a mere pause in the struggle, during which both parties hoped to gain strength for a mightier contest which they saw impending. The war was in fact widening far beyond the bounds of Germany or of Europe. It was becoming a world-wide duel which was to settle the destinies of mankind. Already France was claiming the valleys of the Ohio and the Mississippi, and mooted the great question whether the fortunes of the New World were to be moulded by Frenchmen or Englishmen. Already two French adventurers were driving English merchants from Madras, and building up, as they trusted, a power which was to add India to the dominions of France.

The early intercourse of England with India gave little promise of the great fortunes which awaited it. It was not till the close of Elizabeth's reign, a century after Vasco da Gama had crept round the Cape of Good Hope and founded the Portuguese settlement on the Goa coast, that an East India

Company was established in London. The trade, profitable as it was, remained small in extent; and the three early factories of the Company were only gradually acquired during the century which followed. The first, that of Madras, consisted of but six fishermen's houses beneath Fort St. George; that of Bombay was ceded by the Portuguese as part of the dowry of Catharine of Braganza; while Fort William, with the mean village which has since grown into Calcutta, owes its origin to the reign of William the Third. Each of these forts was built simply for the protection of the Company's warehouses, and guarded by a few "sepahis," sepoys, or paid native soldiers; while the clerks and traders of each establishment were under the direction of a President and a Council. One of these clerks in the middle of the eighteenth century was Robert Clive, the son of a small proprietor near Market Drayton in Shropshire, an idle dare-devil of a boy whom his friends had been glad to get rid of by packing him off in the Company's service as a writer to Madras. His early days there were days of wretchedness and despair. He was poor and cut off from his fellows by the haughty shyness of his temper, weary of desk-work, and haunted by home-sickness. Twice he attempted suicide; and it was only on the failure of his second attempt that he flung down the pistol which baffled him with a conviction that he was reserved for higher things.

A change came at last in the shape of war and captivity. As soon as the war of the Austrian Succession broke out, the superiority of the French in power and influence tempted them to expel the English from India. Labourdonnais, the governor of the French colony of the Mauritius, besieged Madras, razed it to the ground, and carried its clerks and merchants prisoners to Pondicherry. Clive was among these captives, but he escaped in disguise, and returning to the settlement, threw aside his clerkship for an ensign's commission in the force which the Company was busily raising. For the capture of Madras had not only established the repute of the French arms, but had roused Dupleix, the governor of Pondicherry, to conceive plans for the creation of a French empire in India. When the English merchants of Elizabeth's day brought their goods to Surat, all India, save the south, had just been brought for the first time under the rule of a

single great power by the Mogul Emperors of the line of Akbar. But with the death of Aurungzebe, in the reign of Anne, the Mogul Empire fell fast into decay. A line of feudal princes raised themselves to independence in Rajpootana. The lieutenants of the Emperor founded separate sovereignties at Lucknow and Hyderabad, in the Carnatic, and in Bengal. The plain of the Upper Indus was occupied by a race of religious fanatics called the Sikhs. Persian and Afghan invaders crossed the Indus, and succeeded even in sacking Delhi, the capital of the Moguls. Clans of systematic plunderers, who were known under the name of Mahrattas, and who were in fact the natives whom conquest had long held in subjection, poured down from the highlands along the western coast, ravaged as far as Calcutta and Tanjore, and finally set up independent states at Poonah and Gwalior. Dupleix skilfully availed himself of the disorder around him. He offered his aid to the Emperor against the rebels and invaders who had reduced his power to a shadow; and it was in the Emperor's name that he meddled with the quarrels of the states of Central and Southern India, made himself virtually master of the Court of Hyderabad, and seated a creature of his own on the throne of the Carnatic. Trichinopoly, the one town which held out against this Nabob of the Carnatic, was all but brought to surrender when Clive, in 1751, came forward with a daring scheme for its relief. With a few hundred English and sepoys he pushed through a thunderstorm to the surprise of Arcot, the Nabob's capital, entrenched himself in its enormous fort, and held it for fifty days against thousands of assailants. Moved by his gallantry, the Mahrattas, who had never believed that Englishmen would fight before, advanced and broke up the siege; but Clive was no sooner freed than he showed equal vigor in the field. At the head of raw recruits who ran away at the first sound of a gun, and sepoys who hid themselves as soon as the cannon opened fire, he twice attacked and defeated the French and their Indian allies, foiled every effort of Dupleix, and razed to the ground a pompous pillar which the French governor had set up in honor of his earlier victories.

Clive was recalled by broken health to England, and the fortunes of the struggle in India were left for decision to a later day. But while France was struggling for the Empire

of the East she was striving with even more apparent success for the command of the new world of the West. Populous as they had become, the English settlements in America still lay mainly along the sea-board of the Atlantic; for only a few exploring parties had penetrated into the Alleghanies before the Seven Years' War; and Indian tribes wandered unquestioned along the lakes. It was not till the peace of Aix-la-Chapelle that the pretensions of France drew the eyes of the colonists and of English statesmen to the interior of the Western Continent. Planted firmly in Louisiana and Canada, France openly claimed the whole country west of the Alleghanies as its own, and its governors now ordered all English settlers or merchants to be driven from the valleys of Ohio or Mississippi which were still in the hands of Indian tribes. Even the inactive Pelham revolted from pretensions such as these. The original French settlers were driven from Acadia or Nova Scotia, and an English colony founded the settlement of Halifax. An Ohio Company was formed, and its agents made their way to the valleys of that river and the Kentucky; while envoys from Virginia and Pennsylvania drew closer the alliance between their colonies and the Indian tribes across the mountains. Nor were the French slow to accept the challenge. Fighting began in Acadia. A vessel of war appeared in Ontario, and Niagara was turned into a fort. A force of 1,200 men despatched to Erie drove the few English settlers from their little colony on the fork of the Ohio, and founded there a fort called Duquesne, on the site of the later Pittsburgh. The fort at once gave this force command of the river valley. After a fruitless attack on it, under George Washington, a young Virginian, the colonists were forced to withdraw over the mountains, and the whole of the west was left in the hands of France. The bulk of the Indian tribes from Canada as far as the Mississippi attached themselves to the French cause, and the value of their aid was shown in 1755, when General Braddock led a force of English soldiers and American militia to an attack upon Fort Duquesne. The force was utterly routed and Braddock slain. The Marquis of Montcalm, who in 1756 commanded the French forces in Canada, was gifted with singular powers of administration. He carried out with even more zeal than his predecessor the plans of annexation; and the three forts of Duquesne on the Ohio, of Niagara on

the St. Lawrence, and of Ticonderoga on Lake Champlain, were linked together by a chain of lesser forts, which cut off the English colonists from all access to the west. The defeat of Braddock had already roused England to its danger, for it was certain that war in America would be followed by war in Europe. The ministers looked on a league with Prussia, as the only means of checking France; but Frederick held cautiously aloof, while the advances of England to Prussia only served to alienate Maria Theresa, whose one desire was to regain Silesia. The two powers of the House of Bourbon were still bound by the Family Compact; and as early as 1752 Maria Theresa by a startling change of policy drew to their alliance. The jealousy which Russia entertained of the growth of a strong power in North Germany brought the Czarina Elizabeth to promise aid to the schemes of the Queen of Hungary; and in 1755 the league of the four powers and of Saxony was practically completed. So secret were these negotiations that they remained unknown to Henry Pelham and to his brother the Duke of Newcastle, who succeeded him on his death in 1754 as the head of the Ministry. But they were detected from the first by the keen eye of Frederick of Prussia, who saw himself fronted by a line of foes that stretched from Paris to St. Petersburg.

The danger to England was hardly less; for France appeared again on the stage with a vigor and audacity which recalled the days of Louis the Fourteenth. The weakness and corruption of the French government were screened for a time by the daring and scope of its plans, as by the ability of the agents it found to carry them out. In England, on the contrary, all was vagueness and indecision. It was not till the close of the year that a treaty was at last concluded with the Prussian King. With this treaty between England and Frederick began the Seven Years' War. No war has had greater results on the history of the world or brought greater triumphs to England; but few have had more disastrous beginnings. Newcastle was too weak and ignorant to rule without aid, and yet too greedy of power to purchase aid by sharing it with more capable men. His preparations for the gigantic struggle before him may be guessed from the fact that there were but three regiments fit for service in England at the opening of 1756. France, on the other hand, was quick in her attack.

Port Mahon in Minorca, the key of the Mediterranean, was besieged by the Duke of Richelieu and forced to capitulate. To complete the shame of England, a fleet sent to its relief under Admiral Byng retreated before the French. In Germany Frederick seized Dresden at the outset of the war and forced the Saxon army to surrender; and in 1757 a victory at Prague made him master for a while of Bohemia; but his success was transient, and a defeat at Kolin drove him to retreat again into Saxony. In the same year the Duke of Cumberland, who had taken post on the Weser with an army of fifty thousand men for the defence of Hanover, fell back before a French army to the mouth of the Elbe, and engaged by the Convention of Closter-Seven to disband his forces. In America things went even worse than in Germany. The inactivity of the English generals was contrasted with the genius and activity of Montcalm. Already masters of the Ohio by the defeat of Braddock, the French drove the English garrison from the forts which commanded Lake Ontario and Lake Champlain, and their empire stretched without a break over the vast territory from Louisiana to the St. Lawrence. A despondency without parallel in our history took possession of our coolest statesmen, and even the impassive Chesterfield cried in despair, "We are no longer a nation."

But the nation of which Chesterfield despaired was really on the eve of its greatest triumphs, and the miserable incapacity of the Duke of Newcastle only called to the front the genius of William Pitt. Pitt was the grandson of a wealthy governor of Madras, who had entered Parliament in 1735 as member for one of his father's pocket boroughs, and had headed the younger "patriots" in their attack on Walpole. The dismissal from the army by which Walpole met his attacks turned his energy wholly to politics. His fiery spirit was hushed in office during the "broad-bottom administration" which followed Walpole's fall, but after the death of Henry Pelham, Newcastle's jealousy of power threw him into an attitude of opposition and he was deprived of his place. When the disasters of the war however drove Newcastle from office in November, 1756, Pitt became Secretary of State; but in four months the enmity of the King and of Newcastle's party drove him to resign. In July, 1757, however, it was necessary to recall him. The failure of Newcastle to construct an administration

forced the Duke to a junction with his rival; and fortunately for their country, the character of the two statesmen made the compromise an easy one. For all that Pitt coveted, for the general direction of public affairs, the control of foreign policy, the administration of the war, Newcastle had neither capacity nor inclination. On the other hand, his skill in parliamentary management was unrivalled. If he knew little else, he knew better than any living man the price of every member and the intrigues of every borough. What he cared for was not the control of affairs, but the distribution of patronage and the work of corruption, and from this Pitt turned disdainfully away. "Mr. Pitt does everything," wrote Horace Walpole, "and the Duke gives everything. So long as they agree in this partition they may do what they please." Out of the union of these two strangely-contrasted leaders, in fact, rose the greatest, as it was the last, of the purely Whig administrations. But its real power lay from beginning to end in Pitt himself. Poor as he was, for his income was little more than two hundred a year, and springing as he did from a family of no political importance, it was by sheer dint of genius that the young cornet of horse, at whose youth and inexperience Walpole had sneered, seized a power which the Whig houses had ever since the Revolution kept jealously in their grasp. His ambition had no petty aim. "I want to call England," he said as he took office, "out of that enervated state in which twenty thousand men from France can shake her." His call was soon answered. He at once breathed his own lofty spirit into the country he served, as he communicated something of his own grandeur to the men who served him. "No man," said a soldier of the time, "ever entered Mr. Pitt's closet who did not feel himself braver when he came out than when he went in." Ill-combined as were his earlier expeditions, many as were his failures, he roused a temper in the nation at large which made ultimate defeat impossible. "England has been a long time in labor," exclaimed Frederick of Prussia as he recognized a greatness like his own, "but she has at last brought forth a man.

It is this personal and solitary grandeur which strikes us most as we look back to William Pitt. The tone of his speech and action stands out in utter contrast with the tone of his time. In the midst of a society critical, polite, indifferent,

simple even to the affectation of simplicity, witty and amusing but absolutely prosaic, cool of heart and of head, sceptical of virtue and enthusiasm, sceptical above all of itself, Pitt stood absolutely alone. The depth of his conviction, his passionate love for all that he deemed lofty and true, his fiery energy, his poetic imaginativeness, his theatrical airs and rhetoric, his haughty self-assumption, his pompousness and extravagance, were not more puzzling to his contemporaries than the confidence with which he appealed to the higher sentiments of mankind, the scorn with which he turned from a corruption which had till then been the great engine of politics, the undoubting faith which he felt in himself, in the grandeur of his aims, and in his power to carry them out. "I know that I can save the country," he said to the Duke of Devonshire on his entry into the Ministry, "and I know no other man can." The groundwork of Pitt's character was an intense and passionate pride; but it was a pride which kept him from stooping to the level of the men who had so long held England in their hands. He was the first statesman since the Restoration who set the example of a purely public spirit. Keen as was his love of power, no man ever refused office so often, or accepted it with so strict a regard to the principles he professed. "I will not go to Court," he replied to an offer which was made to him, "if I may not bring the Constitution with me." For the corruption about him he had nothing but disdain. He left to Newcastle the buying of seats and the purchase of members. At the outset of his career Pelham appointed him to the most lucrative office in his administration, that of Paymaster of the Forces; but its profits were of an illicit kind, and poor as he was Pitt refused to accept one farthing beyond his salary. His pride never appeared in loftier and nobler form than in his attitude towards the people at large. No leader had ever a wider popularity than "the great commoner," as Pitt was styled, but his air was always that of a man who commands popularity, not that of one who seeks it. He never bent to flatter popular prejudice. When mobs were roaring themselves hoarse for "Wilkes and liberty," he denounced Wilkes as a worthless profligate; and when all England went mad in its hatred of the Scots, Pitt haughtily declared his esteem for a people whose courage he had been the first to enlist on the side of loyalty. His noble

figure, the hawk-like eye which flashed from the small thin face, his majestic voice, the fire and grandeur of his eloquence, gave him a sway over the House of Commons far greater than any other minister has possessed. He could silence an opponent with a look of scorn, or hush the whole House with a single word. But he never stooped to the arts by which men form a political party, and at the height of his power his personal following hardly numbered half a dozen members.

His real strength indeed lay not in Parliament but in the people at large. His significant title of "the great commoner" marks a political revolution. "It is the people who have sent me here," Pitt boasted with a haughty pride when the nobles of the Cabinet opposed his will. He was the first to see that the long political inactivity of the public mind had ceased, and that the progress of commerce and industry had produced a great middle class, which no longer found its representatives in the legislature. "You have taught me," said George the Second when Pitt sought to save Byng by appealing to the sentiment of Parliament, "to look for the voice of my people in other places than within the House of Commons." It was this unrepresented class which had forced him into power. During his struggle with Newcastle the greater towns backed him with the gift of their freedom and addresses of confidence. "For weeks," laughs Horace Walpole, "it rained gold boxes." London stood by him through good report and evil report, and the wealthiest of English merchants, Alderman Beckford, was proud to figure as his political lieutenant. The temper of Pitt indeed harmonized admirably with the temper of the commercial England which rallied round him, with its energy, its self-confidence, its pride, its patriotism, its honesty, its moral earnestness. The merchant and the trader were drawn by a natural attraction to the one statesman of their time whose aims were unselfish, whose hands were clean, whose life was pure and full of tender affection for wife and child. But there was a far deeper ground for their enthusiastic reverence and for the reverence which his country has borne Pitt ever since. He loved England with an intense and personal love. He believed in her power, her glory, her public virtue, till England learned to believe in herself. Her triumphs were his triumphs, her defeats his defeats. Her dangers lifted him high above all thought of self or party-spirit. "Be one

people," he cried to the factions who rose to bring about his fall: "forget everything but the public! I set you the example!" His glowing patriotism was the real spell by which he held England. But even the faults which checkered his character told for him with the middle classes. The Whig statesmen who preceded him had been men whose pride expressed itself in a marked simplicity and absence of pretence. Pitt was essentially an actor, dramatic in the cabinet, in the House, in his very office. He transacted business with his clerks in full dress. His letters to his family, genuine as his love for them was, are stilted and unnatural in tone. It was easy for the wits of his day to jest at his affectation, his pompous gait, the dramatic appearance which he made on great debates with his limbs swathed in flannel and his crutch by his side. Early in life Walpole sneered at him for bringing into the House of Commons "the gestures and emotions of the stage." But the classes to whom Pitt appealed were classes not easily offended by faults of taste, and saw nothing to laugh at in the statesman who was borne into the lobby amidst the tortures of the gout, or carried into the House of Lords to breathe his last in a protest against national dishonor.

Above all Pitt wielded the strength of a resistless eloquence. The power of political speech had been revealed in the stormy debates of the Long Parliament, but it was cramped in its utterance by the legal and theological pedantry of the time. Pedantry was flung off by the age of the Revolution, but in the eloquence of Somers and his rivals we see ability rather than genius, knowledge, clearness of expression, precision of thought, the lucidity of the pleader or the man of business, rather than the passion of the orator. Of this clearness of statement Pitt had little or none. He was no ready debater like Walpole, no speaker of set speeches like Chesterfield. His set speeches were always his worst, for in these his want of taste, his love of effect, his trite quotations and extravagant metaphors came at once to the front. That with defects like these he stood far above every orator of his time was due above all to his profound conviction, to the earnestness and sincerity with which he spoke. "I must sit still," he whispered once to a friend, "for when once I come up everything that is in my mind comes out." But the reality of his eloquence was transfigured by a large and poetic imagination, and by

a glow of passion which not only raised him high above the men of his own day but set him in the front rank among the orators of the world. The cool reasoning, the wit, the common sense of his age made way for a splendid audacity, a sympathy with popular emotion, a sustained grandeur, a lofty vehemence, a command over the whole range of human feeling. He passed without an effort from the most solemn appeal to the gayest raillery, from the keenest sarcasm to the tenderest pathos. Every word was driven home by the grand self-consciousness of the speaker. He spoke always as one having authority. He was in fact the first English orator whose words were a power, a power not over Parliament only but over the nation at large. Parliamentary reporting was as yet unknown, and it was only in detached phrases and half-remembered outbursts that the voice of Pitt reached beyond the walls of St. Stephen's. But it was especially in these sudden outbursts of inspiration, in these brief passionate appeals that the power of his eloquence lay. The few broken words we have of him stir the same thrill in men of our day which they stirred in the men of his own. But passionate as was Pitt's eloquence, it was the eloquence of a statesman, not of a rhetorician. Time has approved almost all his greater struggles, his defence of the liberty of the subject against arbitrary imprisonment under "general warrants," of the liberty of the press against Lord Mansfield, of the rights of constituencies against the House of Commons, of the constitutional rights of America against England itself. His foreign policy was directed to the preservation of Prussia, and Prussia has vindicated his foresight by the creation of Germany. We have adopted his plans for the direct government of India by the Crown, which when he proposed them were regarded as insane. Pitt was the first to recognize the liberal character of the Church of England. He was the first to sound the note of Parliamentary reform. One of his earliest measures shows the generosity and originality of his mind. He quieted Scotland by employing its Jacobites in the service of their country, and by raising Highland regiments among its clans. The selection of Wolfe and Amherst as generals showed his contempt for precedent and his inborn knowledge of men.

But it was fortune rather than his genius which showered on Pitt the triumphs which signalized the opening of his ministry.

In the East the daring of a merchant's clerk made a company of English traders the sovereigns of Bengal, and opened that wondrous career of conquest which has added the Indian peninsula, from Ceylon to the Himalayas, to the dominion of the British Crown. Recalled by broken health to England, Clive returned at the outbreak of the Seven Years' War to win for England a greater prize than that which his victories had won for it in the supremacy of the Carnatic. He had been only a few months at Madras when a crime whose horror still lingers in English memories called him to Bengal. Bengal, the delta of the Ganges, was the richest and most fertile of all the provinces of India. Its rice, its sugar, its silk, and the produce of its looms, were famous in European markets. Its viceroys, like their fellow lieutenants, had become practically independent of the Emperor, and had added to Bengal the provinces of Orissa and Behar. Surajah Dowlah, the master of this vast domain, had long been jealous of the enterprise and wealth of the English traders; and, roused at this moment by the instigation of the French, he appeared before Fort William, seized its settlers, and thrust a hundred and fifty of them into a small prison called the Black Hole of Calcutta. The heat of an Indian summer did its work of death. The wretched prisoners trampled each other under foot in the madness of thirst, and in the morning only twenty-three remained alive. Clive sailed at the news with a thousand Englishmen and two thousand sepoys to wreak vengeance for the crime. He was no longer the boy-soldier of Arcot; and the tact and skill with which he met Surajah Dowlah in the negotiations by which the Viceroy strove to avert a conflict were sullied by the Oriental falsehood and treachery to which he stooped. But his courage remained unbroken. When the two armies faced each other on the plain of Plassey the odds were so great that on the very eve of the battle a council of war counselled retreat. Clive withdrew to a grove hard by, and after an hour's lonely musing gave the word to fight. Courage, in fact, was all that was needed. The fifty thousand foot and fourteen thousand horse who were seen covering the plain at daybreak on the 23d of June, 1757, were soon thrown into confusion by the English guns, and broke in headlong rout before the English charge. The death of Surajah Dowlah enabled the Company to place a creature of its own on the

throne of Bengal; but his rule soon became a nominal one. With the victory of Plassey began in fact the Empire of England in the East.

The year of Plassey was the year of a victory hardly less important in the West. There was little indeed in the military expeditions which marked the opening of Pitt's ministry to justify the trust of his country; for money and blood were lavished on buccaneering descents upon the French coasts which did small damage to the enemy. But incidents such as these had little weight in the minister's general policy. His greatness lies in the fact that he recognized the genius of Frederick the Great, and resolved to give him an energetic support. On his entry into office he refused to ratify the Convention of Closter-Seven, which had reduced Frederick to despair by throwing open his realm to a French advance; protected his flank by gathering an English and Hanoverian force on the Elbe, and on the counsel of the Prussian King placed the best of his generals, the Prince of Brunswick, at its head; while subsidy after subsidy were poured into Frederick's exhausted treasury. Pitt's trust was met by the most brilliant display of military genius which the modern world had as yet witnessed. Two months after his repulse at Koln, Frederick flung himself on a French army, which had advanced into the heart of Germany, and annihilated it in the victory of Rossbach. Before another month had passed he hurried from the Saale to the Oder, and by a yet more signal victory at Leuthen cleared Silesia of the Austrians. The victory of Rossbach was destined to change the fortunes of the world by bringing about the unity of Germany; its immediate effect was to force the French army on the Elbe to fall back on the Rhine. Here Ferdinand of Brunswick, reinforced with twenty thousand English soldiers, held them at bay during the summer, while Frederick, foiled in an attack on Moravia, drove the Russians back on Poland in the battle of Zorndorf. His defeat however by the Austrian General Daun at Hochkirch proved the first of a series of terrible misfortunes; and the year 1759 marks the lowest point of his fortunes. A fresh advance of the Russian army forced the King to attack it at Kunnersdorf in August, and Frederick's repulse ended in the utter rout of his army. For the moment all seemed lost, for even Berlin lay open to the conqueror. A

few days later the surrender of Dresden gave Saxony to the Austrians; and at the close of the year an attempt upon them at Plauen was foiled with terrible loss. But every disaster was retrieved by the indomitable courage and tenacity of the King, and winter found him as before master of Silesia and of all Saxony save the ground which Daun's camp covered. The year which marked the lowest point of Frederick's fortunes was the year of Pitt's greatest triumphs, the year of Minden and Quiberon and Quebec. France aimed both at a descent upon England and at the conquest of Hanover, and gathered a naval armament at Brest, while fifty thousand men under Contades and Broglie united on the Weser. Ferdinand with less than forty thousand met them on the field of Minden. The French marched along the Weser to the attack, with their flanks protected by that river and a brook which ran into it, and with their cavalry, ten thousand strong, massed in the centre. The six English regiments in Ferdinand's army fronted the French horse, and, mistaking their General's order, marched at once upon them in line, regardless of the batteries on their flank, and rolled back charge after charge with volleys of musketry. In an hour the French centre was utterly broken. "I have seen," said Contades, "what I never thought to be possible—a single line of infantry break through three lines of cavalry, ranked in order of battle, and tumble them to ruin!" Nothing but the refusal of Lord John Sackville to complete the victory by a charge of the horse which he headed saved the French from utter rout. As it was, their army again fell back broken on Frankfort and the Rhine. The project of an invasion of England met with like success. Eighteen thousand men lay ready to embark on board the French fleet, when Admiral Hawke came in sight of it at the mouth of Quiberon Bay. The sea was rolling high, and the coast where the French ships lay was so dangerous from its shoals and granite reefs that the pilot remonstrated with the English admiral against his project of attack. "You have done your duty in this remonstrance," Hawke coolly replied; "now lay me alongside the French admiral." Two English ships were lost on the shoals, but the French fleet was ruined and the disgrace of Byng's retreat wiped away.

It was not in the Old World only that the year of Minden and Quiberon brought glory to the arms of England. In

Europe, Pitt had wisely limited his efforts to the support of Prussia, but across the Atlantic the field was wholly his own, and he had no sooner entered office than the desultory raids, which had hitherto been the only resistance to French aggression, were superseded by a large and comprehensive plan of attack. The sympathies of the colonies were won by an order which gave their provincial officers equal rank with the royal officers in the field. They raised at Pitt's call twenty thousand men, and taxed themselves heavily for their support. Three expeditions were simultaneously directed against the French line—one to the Ohio valley, one against Ticonderoga on Lake Champlain, while a third under General Amherst and Admiral Boscawen sailed to the mouth of the St. Lawrence. The last was brilliantly successful. Louisburg, though defended by a garrison of five thousand men, was taken with the fleet in its harbor, and the whole province of Cape Breton reduced. The American militia supported the British troops in a vigorous campaign against the forts; and though Montcalm, with a far inferior force, was able to repulse General Abercrombie from Ticonderoga, a force from Philadelphia and Virginia, guided and inspired by the courage of George Washington, made itself master of Duquesne. The name of Pittsburg which was given to their new conquest still commemorates the enthusiasm of the colonists for the great Minister who first opened to them the West. The next year saw the evacuation of Ticonderoga before the advance of Amherst, and the capture of Fort Niagara after the defeat of an Indian force which marched to its relief. The capture of the three forts was the close of the French effort to bar the advance of the colonists to the valley of the Mississippi, and to place in other than English hands the destinies of North America. But Pitt had resolved, not merely to foil the ambition of Montcalm, but to destroy the French rule in America altogether; and while Amherst was breaking through the line of forts, an expedition under General Wolfe entered the St. Lawrence and anchored below Quebec. Wolfe had already fought at Dettingen, Fontenoy, and Laffeldt, and had played the first part in the capture of Louisburg. Pitt had discerned the genius and heroism which lay hidden beneath the awkward manner and the occasional gasconade of the young soldier of thirty-three whom he chose for the crowning exploit of the war, but

for a while his sagacity seemed to have failed. No efforts could draw Montcalm from the long line of inaccessible cliffs which at this point borders the river, and for six weeks Wolfe saw his men wasting away in inactivity while he himself lay prostrate with sickness and despair. At last his resolution was fixed, and in a long line of boats the army dropped down the St. Lawrence to a point at the base of the Heights of Abraham, where a narrow path had been discovered to the summit. Not a voice broke the silence of the night save the voice of Wolfe himself, as he quietly repeated the stanzas of Gray's "Elegy in a Country Churchyard," remarking as he closed, "I had rather be the author of that poem than take Quebec." But his nature was as brave as it was tender; he was the first to leap on shore and to scale the narrow path where no two men could go abreast. His men followed, pulling themselves to the top by the help of bushes and the crags, and at daybreak of the 12th of September the whole army stood in orderly formation before Quebec. Montcalm hastened to attack, though his force, composed chiefly of raw militia, was far inferior in discipline to the English; his onset however was met by a steady fire, and at the first English advance his men gave way. Wolfe headed a charge which broke the French line, but a ball pierced his breast in the moment of victory. "They run," cried an officer who held the dying man in his arms—"I protest they run." Wolfe rallied to ask who they were that ran, and was told "The French." "Then," he murmured, "I die happy!" The fall of Montcalm in the moment of his defeat completed the victory; and the submission of Canada, on the capture of Montreal by Amherst in 1760, put an end to the dream of a French empire in America.

Section II.—The Independence of America, 1761—1782.*

Never had England played so great a part in the history of mankind as in the year 1759. It was a year of triumphs in every quarter of the world. In September came the news of Minden, and of a victory off Lagos. In October came tidings of the capture of Quebec. November brought word of the French defeat at Quiberon. "We are forced to ask every morning what victory there is," laughed Horace Walpole, "for fear of missing one." But it was not so much in the number as in the importance of its triumphs that the Seven Years' War stood and remains still without a rival. It is no exaggeration to say that three of its many victories determined for ages to come the destinies of mankind. With that of Rossbach began the re-creation of Germany, the revival of its political and intellectual life, the long process of its union under the leadership of Prussia and Prussia's kings. With that of Plassey the influence of Europe told for the first time since the days of Alexander on the nations of the East. The world, in Burke's gorgeous phrase, "saw one of the races of the northwest cast into the heart of Asia new manners, new doctrines, new institutions." With the triumph of Wolfe on the heights of Abraham began the history of the United States. By removing an enemy whose dread had knit the colonists to the mother-country, and by breaking through the line with which France had barred them from the basin of the Mississippi, Pitt laid the foundation of the great republic

* *Authorities.*—The two sides of the American quarrel have been told with the same purpose of fairness and truthfulness, though with a very different bias, by Lord Stanhope ("History of England from the Peace of Utrecht"), and Mr. Bancroft ("History of the United States"). The latter is by far the more detailed and picturesque, the former perhaps the cooler and more impartial of the two narratives. For England see Mr. Massey's "History of England from the Accession of George the Third;" Walpole's "Memoirs of the Early Reign of George the Third;" the Rockingham Memoirs; the Grenville Papers; the Bedford Correspondence; the correspondence of George the Third with Lord North; the Letters of Junius; and Lord Russell's "Life and Correspondence of C. J. Fox." Burke's speeches and pamphlets during this period, above all his "Thoughts on the Causes of the Present Discontents," are indispensable for any real knowledge of it. The Constitutional History of Sir Erskine May all but compensates us, in its fulness and impartiality, for the loss of Mr. Hallam's comments. [Mr. Lecky's "History of England in the Eighteenth Century" has been published since this book was written.—Ed.]

of the west. Nor were these triumphs less momentous to Britain. The Seven Years' War is a turning-point in our national history as it is a turning-point in the history of the world. Till now the relative weight of the European states had been drawn from their possessions within Europe itself. But from the close of the war it mattered little whether England counted for less or more with the nations around her. She was no longer a mere European power, no longer a mere rival of Germany or Russia or France. Mistress of Northern America, the future mistress of India, claiming as her own the empire of the seas, Britain suddenly towered high above the nations whose position in a single continent doomed them to comparative insignificance in the after history of the world. The war indeed was hardly ended when a consciousness of the destinies that lay before the English people showed itself in the restlessness with which our seamen penetrated into far-off seas. The Atlantic was dwindling into a mere strait within the British Empire; but beyond it to the westward lay a reach of waters where the British flag was almost unknown. In the year which followed the Peace of Paris two English ships were sent on a cruise of discovery to the Straits of Magellan; three years later Captain Wallis reached the coral reefs of Tahiti; and in 1768 Captain Cook traversed the Pacific from end to end, and wherever he touched, in New Zealand, in Australia, he claimed the soil for the English Crown, and opened a new world for the expansion of the English race. Statesmen and people alike felt the change in their country's attitude. In the words of Burke, the Parliament of Britain claimed "an imperial character in which as from the throne of heaven she superintends all the several inferior legislatures, and guides and controls them all, without annihilating any." Its people, steeped in the commercial ideas of the time, saw in the growth of their vast possessions, the monopoly of whose trade was reserved to the mother-country, a source of boundless wealth. The trade with America alone was in 1772 nearly equal to what England carried on with the whole world at the beginning of the century. To guard and preserve so vast and lucrative a dominion became from this moment not only the aim of British statesmen but the resolve of the British people.

From the time when the Puritan emigration added the four

New England States, Massachusetts, New Hampshire, Connecticut, and Rhode Island to those of Maryland and Virginia the progress of the English colonies in North America had been slow, but it had never ceased. Settlers still came, though in smaller numbers, and two new colonies south of Virginia received from Charles the Second their name of the Carolinas. The war with Holland transferred to British rule a district claimed by the Dutch from the Hudson to the inner Lakes; and this country, which was granted by Charles to his brother, received from him the name of New York. Portions were soon broken off from its vast territory to form the colonies of New Jersey and Delaware. In 1682 a train of Quakers followed William Penn across the Delaware into the heart of the primeval forest, and became a colony which recalled its founder and the woodlands among which he planted it in its name of Pennsylvania. A long interval elapsed before a new settlement, which received its title of Georgia from the reigning sovereign, George the Second, was established by General Oglethorpe on the Savannah as a refuge for English debtors and for the persecuted Protestants of Germany. Slow as this progress seemed, the colonies were really growing fast in numbers and in wealth. Their whole population amounted in the middle of the eighteenth century to about 1,200,000 whites and a quarter of a million of negroes; nearly a fourth of that of the mother-country. The wealth of the colonists was growing even faster than their numbers. As yet the Southern colonies were the more productive. Virginia boasted of its tobacco plantations, Georgia and the Carolinas of their maize and rice and indigo crops, while New York and Pennsylvania, with the colonies of New England, were restricted to their whale and cod fisheries, their corn harvests and their timber trade. The distinction indeed between the Northern and Southern colonies was more than an industrial one. In the Southern States the prevalence of slavery produced an aristocratic spirit and favored the creation of large estates; even the system of entails had been introduced among the wealthy planters of Virginia, where many of the older English families found representatives in houses such as those of Fairfax and Washington. Throughout New England, on the other hand, the characteristics of the Puritans, their piety, their intolerance,

their simplicity of life, their love of equality and tendency to democratic institutions, remained unchanged. In education and political activity New England stood far ahead of its fellow colonies, for the settlement of the Puritans had been followed at once by the establishment of a system of local schools which is still the glory of America. "Every township," it was enacted, "after the Lord hath increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and when any town shall increase to the number of a hundred families, they shall set up a grammar school."

Great however as these differences were, and great as was to be their influence on American history, they were little felt as yet. In the main features of their outer organization the whole of the colonies stood fairly at one. In religious and in civil matters alike all of them contrasted sharply with the England at home. Religious tolerance had been brought about by a medley of religious faiths such as the world had never seen before. New England was still a Puritan stronghold. In all the Southern colonies the Episcopal Church was established by law, and the bulk of the settlers clung to it; but Roman Catholics formed a large part of the population of Maryland. Pennsylvania was a State of Quakers. Presbyterians and Baptists had fled from tests and persecutions to colonize New Jersey. Lutherans and Moravians from Germany abounded among the settlers of Carolina and Georgia. In such a chaos of creeds religious persecution became impossible. There was the same outer diversity and the same real unity in the political tendency and organization of the States. Whether the spirit of the colony was democratic, moderate, or oligarchical, its form of government was pretty much the same. The original rights of the proprietor, the projector and grantee of the earliest settlement, had in all cases, save in those of Pennsylvania and Maryland, either ceased to exist or fallen into desuetude. The government of each colony lay in a House of Assembly elected by the people at large, with a Council sometimes elected, sometimes nominated by the Governor, and a Governor either elected, or appointed by the Crown. With the appointment of these Governors all administrative interference on the part of the Government at home practically ended. The colonies were left by a happy

neglect to themselves. It was wittily said at a later day that "Mr. Grenville lost America because he read the American despatches, which none of his predecessors ever did." There was little room indeed for any interference within the limits of the colonies. Their privileges were secured by royal charters. Their Assemblies alone exercised the right of internal taxation, and they exercised it sparingly. Walpole, like Pitt afterwards, set roughly aside the project for an American excise. "I have Old England set against me," he said, "by this measure, and do you think I will have New England too?" Even in matters of trade the supremacy of the mother country was far from being a galling one. There were some small import duties, but they were evaded by a well-understood system of smuggling. The restriction of trade with the colonies to Great Britain was more than compensated by the commercial privileges which the Americans enjoyed as British subjects. As yet, therefore, there was nothing to break the good-will which the colonists felt towards the mother country, while the danger of French aggression drew them closely to it. But strong as the attachment of the Americans to Britain seemed at the close of the war, keen lookers-on saw in the very completeness of Pitt's triumph a danger to their future union. The presence of the French in Canada, their designs in the west, had thrown America for protection on the mother-country. But with the conquest of Canada all need of this protection was removed. The attitude of England towards its distant dependency became one of mere possession: and differences of temper, which had till now been thrown into the background by the higher need for union, started into a new prominence. If questions of trade and taxation awoke murmurings and disputes, behind these grievances lay an uneasy dread at the democratic form which the government and society of the colonies had taken, and at the "levelling principles" which prevailed.

To check this republican spirit, to crush all dreams of severance, and to strengthen the unity of the British Empire was one of the chief aims of the young sovereign who mounted the throne on the death of his grandfather in 1760. For the first and last time since the accession of the House of Hanover England saw a King who was resolved to play a part in English politics; and the part which George the Third suc-

ceeded in playing was undoubtedly a memorable one. In ten years he reduced government to a shadow, and turned the loyalty of his subjects at home into disaffection. In twenty he had forced the American colonies into revolt and independence, and brought England to what then seemed the brink of ruin. Work such as this has sometimes been done by very great men, and often by very wicked and profligate men; but George was neither profligate nor great. He had a smaller mind than any English king before him save James the Second. He was wretchedly educated, and his natural powers were of the meanest sort. Nor had he the capacity for using greater minds than his own by which some sovereigns have concealed their natural littleness. On the contrary, his only feeling towards great men was one of jealousy and hate. He longed for the time when "decrepitude or death" might put an end to Pitt; and even when death had freed him from "this trumpet of sedition," he denounced the proposal for a public monument to the great statesman as "an offensive measure to me personally." But dull and petty as his temper was, he was clear as to his purpose and obstinate in the pursuit of it. And his purpose was to rule. "George," his mother, the Princess of Wales, had continually repeated to him in youth, "George, be king." He called himself always "a Whig of the Revolution," and he had no wish to undo the work which he believed the Revolution to have done. But he looked on the subjection of his two predecessors to the will of their ministers as no real part of the work of the Revolution, but as a usurpation of that authority which the Revolution had left to the crown. And to this usurpation he was determined not to submit. His resolve was to govern, not to govern against law, but simply to govern, to be freed from the dictation of parties and ministers, and to be in effect the first Minister of the State. How utterly incompatible such a dream was with the Parliamentary constitution of the country as it had received its final form from Sunderland it is easy to see; but George was resolved to carry out his dream. And in carrying it out he was aided by the circumstances of the time. The spell of Jacobitism was broken by the defeat of Charles Edward, and the later degradation of his life wore finally away the thin coating of disloyalty which clung to the clergy and the squires. They were ready again to take part in poli-

tics, and in the accession of a king who, unlike his two predecessors, was no stranger but an Englishman, who had been born in England and spoke English, they found the opportunity they desired. From the opening of the reign Tories gradually appeared again at court. It was only slowly indeed that the party as a whole swung round to a steady support of the Government; but their action told at once on the complexion of English politics. Their withdrawal from public affairs had left them untouched by the progress of political ideas since the Revolution of 1688, and when they returned to political life it was to invest the new sovereign with all the reverence which they had bestowed on the Stuarts. A "King's party" was thus ready made to his hand; but George was able to strengthen it by a vigorous exertion of the power and influence which was still left to the Crown. All promotion in the Church, all advancement in the army, a great number of places in the civil administration and about the court, were still at the King's disposal. If this vast mass of patronage had been practically usurped by the ministers of his predecessors, it was resumed and firmly held by George the Third; and the character of the House of Commons made patronage, as we have seen, a powerful engine in its management. George had one of Walpole's weapons in his hands, and he used it with unscrupulous energy to break up the party which Walpole had held so long together. He saw that the Whigs were divided among themselves by the factious spirit which springs from a long hold of office, and that they were weakened by the rising contempt with which the country at large regarded the selfishness and corruption of its representatives. More than thirty years before, Gay had set the leading statesmen of the day on the public stage under the guise of highwaymen and pickpockets. "It is difficult to determine," said the witty playwright, "whether the fine gentlemen imitate the gentlemen of the road, or the gentlemen of the road the fine gentlemen." And now that the "fine gentlemen" were represented by hoary jobbers such as Newcastle, the public contempt was fiercer than ever, and men turned sickened from the intrigues and corruption of party to a young sovereign who aired himself in a character which Bolingbroke had invented, as a Patriot King.

Had Pitt and Newcastle held together, supported as the

one was by the commercial classes, the other by the Whig families and the whole machinery of Parliamentary management, George must have struggled in vain. But the ministry was already disunited. The Whigs, attached to peace by the traditions of Walpole, dismayed at the enormous expenditure, and haughty with the pride of a ruling oligarchy, were in silent revolt against the war and the supremacy of the Great Commoner. It was against their will that he rejected proposals of peace from France which would have secured to England all her conquests on the terms of a desertion of Prussia, and that his steady support enabled Frederick still to hold out against the terrible exhaustion of an unequal struggle. The campaign of 1760 indeed was one of the grandest efforts of Frederick's genius. Foiled in an attempt on Dresden, he again saved Silesia by a victory at Liegnitz, and hurled back an advance of Daun by a victory at Torgau; while Ferdinand of Brunswick held his ground as of old along the Weser. But even victories drained Frederick's strength. Men and money alike failed him. It was impossible for him to strike another great blow, and the ring of enemies again closed slowly round him. His one remaining hope lay in the firm support of Pitt, and triumphant as his policy had been, Pitt was tottering to his fall. The envy and resentment of his colleagues at his undisguised supremacy found a supporter in the young King. The Earl of Bute, a mere Court favorite, with the temper and abilities of a gentleman usher, was forced into the Cabinet. As he was known to be his master's mouthpiece, a peace-party was at once formed; but Pitt showed no signs of giving way. In 1761 he proposed a vast extension of the war. He had learnt the signature of a treaty which brought into force the Family Compact between the Courts of Paris and Madrid, and of a special convention which bound the last to declare war on England at the close of the year. Pitt proposed to anticipate the blow by an instant seizure of the treasure fleet which was on its way from the Indies to Cadiz, by occupying the Isthmus of Panama, and by an attack on the Spanish dominions in the New World. But his colleagues shrank from plans so vast and daring; and Newcastle was backed in his resistance by the bulk of the Whigs. The King openly supported them. It was in vain that Pitt enforced his threat of resignation by declaring himself responsible to "the people;"

and the resignation of his post in October changed the face of European affairs.

"Pitt disgraced!" wrote a French philosopher, "it is worth two victories to us!" Frederick on the other hand was almost driven to despair. But George saw in the removal of his powerful minister an opening for the realization of his long-cherished plans. Pitt's appeal had been heard by the people at large. When he went to Guildhall the Londoners hung on his carriage wheels, hugged his footmen, and even kissed his horses. Their break with Pitt was in fact the death-blow of the Whigs. Newcastle found he had freed himself from the great statesman only to be driven from office by a series of studied mortifications from his young master; and the more powerful of his Whig colleagues followed him into retirement. George saw himself triumphant over the two great forces which had hampered the free action of the Crown, "the power which arose," in Burke's words, "from popularity, and the power which arose from political connection;" and the rise of Lord Bute to the post of First Minister marked the triumph of the King. He took office simply as an agent of the King's will; and the King's will was to end the war. In the spring of 1762 Frederick, who still held his ground stubbornly against fate, was brought to the brink of ruin by a withdrawal of the English subsidies; it was in fact only his dogged resolution and a sudden change in the policy of Russia, which followed on the death of his enemy the Czarina Elizabeth, that enabled him at last to retire from the struggle in the Treaty of Hubertsburg without the loss of an inch of territory. George and Lord Bute had already purchased peace at a very different price. With a shameless indifference to the national honor they not only deserted Frederick, but they offered to negotiate a peace for him on the basis of a cession of Silesia to Maria Theresa and East Prussia to the Czarina. The issue of the strife with Spain saved England from humiliation such as this. Pitt's policy of instant attack had been justified by a Spanish declaration of war three weeks after his fall; and the year 1762 saw triumphs which vindicated his confidence in the issue of the new struggle. Martinique, the strongest and wealthiest of the French West Indian possessions, was conquered at the opening of the year, and its conquest was followed by those of Grenada, St. Lucia, and

St. Vincent. In the summer the reduction of Havana brought with it the gain of the rich Spanish colony of Cuba. The Philippines, the wealthiest of the Spanish colonies in the Pacific, yielded to a British fleet. It was these losses that brought about the Peace of Paris. So eager was Bute to end the war that he contented himself in Europe with the recovery of Minorca, while he restored Martinique to France, and Cuba and the Philippines to Spain. The real gains of Britain were in India and America. In the first the French abandoned all right to any military settlement. From the second they wholly withdrew. To England they gave up Canada, Nova Scotia, and Louisiana as far as the Mississippi, while they resigned the rest of that province to Spain, in compensation for its surrender of Florida to the British Crown.

The anxiety which the young King showed for peace abroad sprang mainly from his belief that peace was needful for success in the struggle for power at home. So long as the war lasted Pitt's return to office and the union of the Whigs under his guidance was an hourly danger. But with peace the King's hands were free. He could count on the dissensions of the Whigs, on the new-born loyalty of the Tories, on the influence of the Crown patronage which he had taken into his own hands. But what he counted on most of all was the character of the House of Commons. At a time when it had become all-powerful in the State, the House of Commons had ceased in any real and effective sense to be a representative body at all. That changes in the distribution of seats were called for by the natural shiftings of population and wealth since the days of Edward the First had been recognized as early as the Civil Wars; but the reforms of the Long Parliament were cancelled at the Restoration. From the time of Charles the Second to that of George the Third not a single effort had been made to meet the growing abuses of our parliamentary system. Great towns like Manchester or Birmingham remained without a member, while members still sat for boroughs which, like Old Sarum, had actually vanished from the face of the earth. The effort of the Tudor sovereigns to establish a Court party in the House by a profuse creation of boroughs, most of which were mere villages then in the hands of the Crown, had ended in the appropriation of these seats by the neighboring landowners, who bought and sold

them as they bought and sold their own estates. Even in towns which had a real claim to representation, the narrowing of municipal privileges ever since the fourteenth century to a small part of the inhabitants, and in many cases the restriction of electoral rights to the members of the governing corporation, rendered their representation a mere name. The choice of such places hung simply on the purse or influence of politicians. Some were "the King's boroughs," others obediently returned nominees of the Ministry of the day, others were "close boroughs" in the hands of jobbers like the Duke of Newcastle, who at one time returned a third of all the borough members in the House. The counties and the great commercial towns could alone be said to exercise any real right of suffrage, though the enormous expense of contesting such constituencies practically left their representation in the hands of the great local families. But even in the counties the suffrage was ridiculously limited and unequal. Out of a population of eight millions, only a hundred and sixty thousand were electors at all. How far such a House was from really representing English opinion we see from the fact that in the height of its popularity Pitt could hardly find a seat in it. Purchase was becoming more and more the means of entering Parliament. Seats were bought and sold in the open market at a price which rose to four thousand pounds, and we can hardly wonder that a reformer could allege without a chance of denial, "This House is not a representative of the people of Great Britain. It is the representative of nominal boroughs, of ruined and exterminated towns, of noble families, of wealthy individuals, of foreign potentates." The meanest motives naturally told on a body returned by such constituencies, cut off from the influence of public opinion by the secrecy of Parliamentary proceedings, and yet invested with almost boundless authority. Walpole and Newcastle had made bribery and borough-jobbing the base of their power. George the Third seized it in his turn as a base of the power he proposed to give to the Crown. The royal revenue was employed to buy seats and to buy votes. Day by day George himself scrutinized the voting-list of the two Houses, and distributed rewards and punishments as members voted according to his will or no. Promotion in the civil service, preferment in the Church, rank in the

army, was reserved for "the King's friends." Pensions and court places were used to influence debates. Bribery was employed on a scale never known before. Under Bute's ministry an office was opened at the Treasury for the purchase of members, and twenty-five thousand pounds are said to have been spent in a single day.

The result of these measures was soon seen in the tone of the Parliament. Till now it had bowed beneath the greatness of Pitt; but in the teeth of his denunciation the provisions of the Peace of Paris were approved by a majority of five to one. "Now indeed," cried the Princess Dowager, "my son is king." But the victory was hardly won when King and minister found themselves battling with a storm of popular ill-will such as never since the overthrow of the Stuarts assailed the throne. Violent and reckless as it was, the storm only marked a fresh advance in the re-awakening of public opinion. The Parliament indeed had become supreme, and in theory the Parliament was a representative of the whole English people. But in actual fact the bulk of the English people found itself powerless to control the course of English government. For the first and last time in our history Parliament was unpopular and its opponents sure of popularity. The House of Commons was more corrupt than ever, and it was the slave of the King. The King still called himself a Whig, yet he was reviving a system of absolutism which Whiggism had long made impossible. His minister was a mere favorite, and in Englishmen's eyes a foreigner. The masses saw this, but they saw no way of mending it. They had no means of influencing the Government they hated save by sheer violence. They came therefore to the front with their old national and religious bigotry, their long-nursed dislike of the Hanoverian Court, their long-nursed habits of violence and faction, their long-nursed hatred of Parliament, but with no means of expressing them save riot and uproar. Bute found himself the object of a sudden and universal hatred; and in 1763 he withdrew from office as a means of allaying the storm of popular indignation. But the King was made of more stubborn stuff than his minister. If he suffered his favorite to resign he still regarded him as the real head of administration; for the ministry which Bute left behind him consisted simply of the more courtly of his colleagues. George Gren-

ville was its nominal chief, but its measures were still secretly dictated by the favorite. Charles Townshend and the Duke of Bedford, the two ablest of the Whigs who had remained with Bute after Newcastle's dismissal, refused to join it; and its one man of ability was Lord Shelburne, a young Irishman. It was in fact only the disunion of its opponents which allowed it to hold its ground. Townshend and Bedford remained apart from the main body of the Whigs, and both sections held aloof from Pitt. George had counted on the divisions of the opposition in forming such a ministry; and he counted on the weakness of the ministry to make it the creature of his will. But Grenville had no mind to be a puppet either of the King or of Bute; and the conflicts between the King and his minister soon became so bitter that George appealed in despair to Pitt to form a ministry. Never had Pitt shown a nobler patriotism or a grander self-command than in the reception he gave to this appeal. He set aside all resentment at his own expulsion from office by Newcastle and the Whigs, and made the return to office of the whole party, with the exception of Bedford, a condition of his own. George however refused to comply with terms which would have defeated his designs. The result left Grenville as powerful as he had been weak. Bute ceased to exercise any political influence. On the other hand, Bedford joined Grenville with his whole party, and the ministry thus became strong and compact.

Grenville's one aim was to enforce the supremacy of Parliament over subject as over King. He therefore struck fiercely at the new force of opinion which had just shown its power in the fall of Bute. The opinion of the country no sooner found itself unrepresented in Parliament than it sought an outlet in the Press. In spite of the removal of the censorship after the Revolution the Press had been slow to attain any political influence. Under the first two Georges its progress had been hindered by the absence of great topics for discussion, the worthlessness of the writers, and above all the lethargy of the time. It was in fact not till the accession of George the Third that the impulse which Pitt had given to the national spirit, and the rise of a keener interest in politics, raised the Press into a political power. The nation found in it a court of appeal from the Houses of Parliament. The journals became organs for that outburst of popular hatred which drove

Lord Bute from office; and in the *North Briton* John Wilkes led the way by denouncing the Cabinet and the Peace with peculiar bitterness, and venturing to attack the hated minister by name. Wilkes was a worthless profligate, but he had a remarkable faculty of enlisting popular sympathy on his side, and by a singular irony of fortune he became the chief instrument in bringing about three of the greatest advances which our Constitution has ever made. He woke the nation to a conviction of the need for Parliamentary reform by his defence of the rights of constituencies against the despotism of the House of Commons. He took the lead in the struggle which put an end to the secrecy of Parliamentary proceedings. He was the first to establish the right of the Press to discuss public affairs. In his attack on the ministry of Lord Bute, however he was simply an organ of the general discontent. It was indeed his attack which more than all else determined Bute to withdraw from office. But Grenville was of a stouter stuff than the court favorite, and his administration was hardly reformed when he struck at the growing opposition to Parliament by a blow at its leader. In "Number 45" of the *North Briton* Wilkes had censured the speech from the throne at the opening of Parliament, and a "general warrant" by the Secretary of State was issued against the "authors, printers, and publishers of this seditious libel." Under this warrant forty-nine persons were seized for a time; and in spite of his privilege as a member of Parliament Wilkes himself was sent to the Tower. The arrest however was so utterly illegal that he was at once released by the Court of Common Pleas; but he was immediately prosecuted for libel. While the paper which formed the subject for prosecution was still before the courts of justice it was condemned by the House of Commons as a "false, scandalous, and seditious libel." The House of Lords at the same time voted a pamphlet found among Wilkes's papers to be blasphemous, and advised a prosecution. Wilkes fled to France, and was in 1764 expelled from the House of Commons. But the assumption of an arbitrary judicial power by both Houses, and the system of terror which Grenville put in force against the Press by issuing two hundred injunctions against different journals, roused a storm of indignation throughout the country. Every street resounded with cries of "Wilkes and Liberty." It was soon clear that

opinion had been embittered rather than silenced by the blow at Wilkes; and, six years later, the failure of the prosecution directed against an anonymous journalist named "Junius" for his letter to the King established the right of the Press to criticize the conduct not of ministers or Parliament only, but of the sovereign himself.

The same narrowness of view, the same honesty of purpose, the same obstinacy of temper, were shown by Grenville in a yet more important struggle, a struggle with the American Colonies. Pitt had waged war with characteristic profusion, and he had defrayed the cost of the war by enormous loans. At the time of the Peace of Paris the public debt stood at a hundred and forty millions. The first need therefore which met Bute after the conclusion of the Peace was that of making provision for the new burthens which the nation had incurred, and as these had been partly incurred in the defence of the American Colonies it was the general opinion of Englishmen that the Colonies should bear a share of them. In this opinion Bute and the King concurred. But their plans went further than mere taxation. The new minister declared himself resolved on a rigorous execution of the Navigation laws, laws by which a monopoly of American trade was secured to the mother-country, on the raising of a revenue within the Colonies for the discharge of the debt, and above all on impressing upon the colonists a sense of their dependence upon Britain. The direct trade between America and the French or Spanish West Indian islands had hitherto been fettered by prohibitory duties, but these had been easily evaded by a general system of smuggling. The duties were now reduced, but the reduced duties were rigorously exacted, and a considerable naval force was despatched to the American coast with a view of suppressing the clandestine trade with the foreigner. The revenue which was expected from this measure was to be supplemented by an internal Stamp Tax, a tax on all legal documents issued within the Colonies. The plans of Bute had fallen to the ground on his retirement from office. But Grenville had fully concurred in the financial part at least of Bute's designs; and, now that he found himself at the head of a strong administration, he proceeded to carry out the plans which had been devised for the purpose of raising both an external and internal revenue from America. One of his first steps was

to suppress, by a rigid enforcement of the Navigation laws, the contraband trade which had grown up between the American ports and the adjacent Spanish islands. Harsh and unwise as these measures seemed, the colonists owned their legality; and their resentment only showed itself in a pledge to use no British manufactures till the restrictions were relaxed. But the next scheme of the Minister—his proposal to introduce internal taxation within the bounds of the Colonies themselves by reviving the project of an excise or stamp duty, which Walpole's good sense had rejected—was of another order from his schemes for suppressing the contraband traffic. Unlike the system of the Navigation Acts, it was a gigantic change in the whole actual relations of England and its Colonies. They met it therefore in another spirit. Taxation and representation, they asserted, went hand in hand. America had no representatives in the British Parliament. The representatives of the colonists met in their own colonial assemblies, and all save the Pennsylvanians protested strongly against the interference of Parliament with their right of self-taxation. Massachusetts marked accurately the position she took. "Prohibitions of trade are neither equitable nor just; but the power of taxing is the grand barrier of British liberty. If that is once broken down, all is lost." The distinction was accepted by the assembly of every colony; and it was with their protest that they despatched Benjamin Franklin, who had risen from his position as a working printer in Philadelphia to high repute among scientific discoverers, as their agent to England. In England however Franklin found few who recognized the distinction which the colonists had drawn. Grenville had no mind to change his plans without an assurance, which Franklin could not give, of a union of the Colonies to tax themselves; and the Stamp Act was passed through both Houses with less opposition than a turnpike bill.

The Stamp Act was hardly passed when an insult offered to the Princess Dowager, by the exclusion of her name from a Regency Act, brought to a head the quarrel which had long been growing between the ministry and the King. George again offered power to William Pitt. But Pitt stood absolutely alone. The one friend who remained to him, his brother-in-law, Lord Temple, refused to aid in an attempt to construct a Cabinet; and he felt himself too weak, when thus deserted,

to hold his ground in any ministerial combination with the Whigs. The King turned for help to the main body of the Whigs, now headed by the Marquis of Rockingham. The weakness of the ministry which Rockingham formed in July, 1765, was seen in its slowness to deal with American affairs. Franklin had seen no other course for the Colonies, when the obnoxious Acts were passed, but that of submission. But submission was the last thing the colonists dreamed of. Everywhere through New England riots broke out on the news of the arrival of the stamped paper; and the frightened collectors resigned their posts. Northern and Southern States were drawn together by the new danger. The assembly of Virginia was the first to formally deny the right of the British Parliament to meddle with internal taxation, and to demand the repeal of the acts. Massachusetts not only adopted the denial and the demand as its own, but proposed a Congress of delegates from all the colonial assemblies to provide for common and united action; and in October, 1765, this Congress met to repeat the protest and petition of Virginia. The news of its assembly reached England at the end of the year, and at once called Pitt to the front when the Houses met in the spring of 1766. As a minister he had long since rejected a similar scheme for taxing the Colonies. He had been ill and absent from Parliament when the Stamp Act was passed, but he adopted to the full the constitutional claim of America. He gloried in a resistance which was denounced in Parliament as rebellion. "In my opinion," he said, "this kingdom has no right to lay a tax on the Colonies. . . . America is obstinate! America is almost in open rebellion! Sir, I rejoice that America has resisted. Three millions of people so dead to all the feelings of liberty as voluntarily to submit to be slaves would have been fit instruments to make slaves of the rest."

Their was a general desire that Pitt should return to office; but the negotiations for his union with the Whigs broke down. The radical difference between their policy and that of Pitt was now in fact defined for them by the keenest political thinker of the day. Edmund Burke had come to London in 1750 as a poor and unknown Irish adventurer. The learning which at once won him the friendship of Johnson, and the imaginative power which enabled him to give his learning a

living shape, promised him a philosophical and literary career ; but instinct drew Burke to politics ; he became secretary to Lord Rockingham, and in 1765 entered Parliament under his patronage. His speeches on the Stamp Acts at once lifted him into fame. The heavy Quaker-like figure, the scratch wig, the round spectacles, the cumbrous roll of paper which loaded Burke's pocket, gave little promise of a great orator and less of the characteristics of his oratory—its passionate ardor, its poetic fancy, its amazing prodigality of resources ; the dazzling succession in which irony, pathos, invective, tenderness, the most brilliant word-pictures, the coolest argument followed each other. It was an eloquence indeed of a wholly new order in English experience. Walpole's clearness of statement, Pitt's appeals to emotion, were exchanged for the impassioned expression of a distinct philosophy of politics. "I have learned more from him than from all the books I ever read," Fox cried at a later time, with a burst of generous admiration. The philosophical cast of Burke's reasoning was unaccompanied by any philosophical coldness of tone or phrase. The groundwork indeed of his nature was poetic. His ideas, if conceived by the reason, took shape and color from the splendor and fire of his imagination. A nation was to him a great living society, so complex in its relations, and whose institutions were so interwoven with glorious events in the past, that to touch it rudely was a sacrilege. Its constitution was no artificial scheme of government, but an exquisite balance of social forces which was in itself a natural outcome of its history and development. His temper was in this way conservative, but his conservatism sprang not from a love of inaction but from a sense of the value of social order, and from an imaginative reverence for all that existed. Every institution was hallowed to him by the clear insight with which he discerned its relations to the past, and its subtle connection with the social fabric around it. To touch even an anomaly seemed to Burke to be risking the ruin of a complex structure of national order which it had cost centuries to build up. "The equilibrium of the Constitution," he said, "has something so delicate about it, that the least displacement may destroy it." "It is a difficult and dangerous matter even to touch so complicated a machine." Perhaps the readiest refutation of such a theory was to be found in its influence on Burke's practical

dealing with politics. In the great question indeed which fronted him as he entered Parliament, it served him well. No man has ever seen with deeper insight the working of those natural forces which build up communities, or which group communities into empires; and in the actual state of the American Colonies he saw a result of such forces which only madmen and pedants would disturb. But Burke's theory was less fitted to the state of politics at home. He looked on the Revolution of 1688 as the final establishment of English institutions. His aim was to keep England as the Revolution had left it, and under the rule of the great nobles who were faithful to the Revolution. He gave his passionate adhesion to the inaction of the Whigs. He made an idol of Lord Rockingham, an honest man, but the weakest of party leaders. He strove to check the corruption of Parliament by a bill for civil retrenchment, but he took the lead in defeating all plans for its reform. Though he was one of the few men in England who understood with Pitt the value of free industry, he struggled bitterly against the young Minister's proposals to give freedom to Irish trade, and against his Commercial Treaty with France. His work seemed to be that of investing with a gorgeous poetry the policy of timid content which the Whigs believed they inherited from Sir Robert Walpole; and the very intensity of his trust in the natural development of a people rendered him incapable of understanding the good that might come from particular laws or from special reforms. At this crisis then the temper of Burke squared with the temper of the Whig party. Rockingham and his fellow-ministers were driven, whether they would or no, to a practical acknowledgment of the policy which Pitt demanded; but they resolved that the repeal of the Stamp Acts should be accompanied by a formal repudiation of the principles of colonial freedom which Pitt had laid down. A declaratory act was brought in, which asserted the supreme power of Parliament over the Colonies "in all cases whatsoever." The passing of this act was followed by the introduction of a bill for the repeal of the Stamp Acts; and in spite of the resistance of the King's friends, a resistance instigated by George himself, the bill was carried by a large majority.

From this moment the Ministry was unable to stand against the general sense that the first man in the country should be

its ruler, and bitter as was the King's hatred of him, he was forced to call Pitt into office. Pitt's aim was still to unite the Whig party, and though forsaken by Lord Temple, he succeeded to a great extent in the administration which he formed in the summer of 1766. Though Rockingham stood coldly aside, some of his fellow-ministers accepted office, and they were reinforced by the few friends who clung to Pitt; while Pitt stooped to strengthen his Parliamentary support by admitting some even of the "King's friends" to a share in the administration. But its life lay really in Pitt himself, in his immense popularity, and in the command which his eloquence gave him over the House of Commons. His acceptance of the Earldom of Chatham removed him to the House of Lords, and for a while ruined the confidence which his reputation for unselfishness had aided him to win. But it was from no vulgar ambition that Pitt laid down his title of the Great Commoner. It was the consciousness of failing strength which made him dread the storms of debate, and in a few months the dread became a certainty. A painful and overwhelming illness, the result of nervous disorganization, withdrew him from public affairs; and his withdrawal robbed his colleagues of all vigor or union. The plans which Chatham had set on foot for the better government of Ireland, the transfer of India from the Company to the Crown, and the formation of an alliance with Prussia and Russia to balance the Family Compact of the House of Bourbon, were suffered to drop. The one aim of the ministry which bore his name, and which during his retirement looked to the Duke of Grafton as its actual head, was simply to exist. But even existence was difficult; and Grafton saw himself forced to a union with the faction which was gathered under the Duke of Bedford, and to the appointment of a Tory noble as Secretary of State.

The force of public opinion on which Pitt had relied turned at once against the ministry which had so drifted from its former position. The elections for the new Parliament were more corrupt than any that had been yet witnessed. How bitter the indignation of the country had grown was seen in its fresh backing of Wilkes. He seized on the opening afforded by the elections to return from France, and was elected member for Middlesex, a county the large number of whose voters made its choice a real expression of public opinion. The choice

of Wilkes was in effect a public condemnation of the House of Commons and the ministerial system. The ministry however and the House alike shrank from a fresh struggle with the agitator; but the King was eager for the contest. After ten years of struggle and disappointment George had all but reached his aim. The two forces which had as yet worsted him were both of them paralyzed. The Whigs were fatally divided, and discredited in the eyes of the country by their antagonism to Pitt. Pitt, on the other hand, was suddenly removed from the stage. The ministry was without support in the country; and for Parliamentary support it was forced to lean more and more on the men who looked for direction to the King himself. One form of opposition alone remained in the public discontent; and at this he struck more fiercely than ever. "I think it highly expedient to apprise you," he wrote to Lord North, "that the expulsion of Mr. Wilkes appears to be very essential, and must be effected." The Ministers and the House of Commons bowed to his will. By his non-appearance in court when charged with libel, Wilkes had become an outlaw, and he was now thrown into prison on his outlawry. Dangerous riots broke out in London and over the whole country. The Ministry were torn with dissensions. The announcement of Lord Shelburne's purpose to resign office was followed by the resignation of Chatham himself; and his withdrawal from the Cabinet which traded on his name left the Ministry wholly dependent on the King. In 1769 Wilkes was brought before the bar of the House of Commons on a charge of libel, a crime which was cognizable in the ordinary courts of law; and was expelled from Parliament. He was at once re-elected by the shire of Middlesex. Violent and oppressive as the course of the House of Commons had been, it had as yet acted within its strict right, for no one questioned its possession of a right of expulsion. But the defiance of Middlesex led it now to go further. It resolved, "That Mr. Wilkes, having been in this session of Parliament expelled the House, was and is incapable of being elected a member to serve in the present Parliament;" and it issued a writ for a fresh election. Middlesex answered this insolent claim to limit the free choice of a constituency by again returning Wilkes; and the House was driven by its anger to a fresh and more outrageous usurpation. It again expelled

the member for Middlesex; and on his return for the third time by an immense majority, it voted that the candidate whom he had defeated, Colonel Luttrell, ought to have been returned, and was the legal representative of Middlesex. The Commons had not only limited at their own arbitrary discretion the free election of the constituency, but they had transferred its rights to themselves by seating Luttrell as member in defiance of the deliberate choice of Wilkes by the freeholders of Middlesex. The country at once rose indignantly against this violation of constitutional law. Wilkes was elected an Alderman of London; and the Mayor, Aldermen, and Livery petitioned the King to dissolve the Parliament. A remonstrance from London and Westminster said boldly that "there is a time when it is clearly demonstrable that men cease to be representatives. That time is now arrived. The House of Commons do not represent the people." Meanwhile a writer who styled himself Junius attacked the Government in letters, which, rancorous and unscrupulous as was their tone, gave a new power to the literature of the press by their clearness and terseness of statement, the finish of their style, and the terrible vigor of their invective.

The storm however beat idly on the obstinacy of the King. The printer of the letters was prosecuted, and the petitions and remonstrances of London were haughtily rejected. At the beginning of 1770 a cessation of the disease which had long held him prostrate enabled Chatham to reappear in the House of Lords. He at once denounced the usurpations of the Commons, and brought in a bill to declare them illegal. But his genius made him the first to see that remedies of this sort were inadequate to meet evils which really sprang from the fact that the House of Commons no longer represented the people of England; and he mooted a plan for its reform by an increase of the county members, who then formed the most independent portion of the House. Further he could not go, for even in the proposals he made he stood almost alone. The Tories and the King's friends were not likely to welcome schemes which would lessen the King's influence. The Whigs under Lord Rockingham had no sympathy with Parliamentary reform; and they shrank with haughty disdain from the popular agitation in which public opinion was forced to express itself, and which Chatham, while censuring

its extravagance, deliberately encouraged. It is from the quarrel between Wilkes and the House of Commons that we may date the influence of public meetings on English politics. The gatherings of the Middlesex electors in his support were preludes to the great meetings of Yorkshire freeholders in which the question of Parliamentary reform rose into importance; and it was in the movement for reform, and the establishment of corresponding committees throughout the country for the purpose of promoting it, that the power of political agitation first made itself felt. Political societies and clubs took their part in this quickening and organization of public opinion: and the spread of discussion, as well as the influence which now began to be exercised by the appearance of vast numbers of men in support of any political movement, proved that Parliament would soon have to reckon with the sentiments of the people at large.

But an agent far more effective than popular agitation was preparing to bring the force of public opinion to bear on Parliament itself. We have seen how much of the corruption of the House of Commons sprang from the secrecy of Parliamentary proceedings, but this secrecy was the harder to preserve as the nation woke to a greater interest in its own affairs. From the accession of the Georges imperfect reports on the more important discussions began to be published under the title of "*The Senate of Lilliput*," and with feigned names or simple initials to denote the speakers. Obtained by stealth and often merely recalled by memory, such reports were naturally inaccurate; and their inaccuracy was eagerly seized on as a pretext for enforcing the rules which guarded the secrecy of proceedings in Parliament. In 1771 the Commons issued a proclamation forbidding the publication of debates; and six printers, who set it at defiance, were summoned to the bar of the House. One who refused to appear was arrested by its messenger; but the arrest at once brought the House into conflict with the magistrates of London. They set aside the proclamation as without legal force, released the printers, and sent the messenger to prison for an unlawful arrest. The House sent the Lord Mayor to the Tower, but the cheers of the crowds which followed him on his way told that public opinion was again with the Press, and the attempt to hinder its publication of Parliamentary proceedings dropped silently

on his release at the next prorogation. Few changes of equal importance have been so quietly brought about. Not only was the responsibility of members to their constituents made constant and effective by the publication of their proceedings, but the nation itself was called in to assist in the deliberations of its representatives. A new and wider interest in its own affairs was roused in the people at large, and a new political education was given to it through the discussion of every subject of national importance in the Houses and the Press. Public opinion, as gathered up and represented on all its sides by the journals of the day, became a force in practical statesmanship, influenced the course of debates, and controlled in a closer and more constant way than even Parliament itself had been able to do the actions of the Government. The importance of its new position gave a weight to the Press which it had never had before. The first great English journals date from this time. With the *Morning Chronicle*, the *Morning Post*, the *Morning Herald*, and the *Times*, all of which appeared in the interval between the opening years of the American War and the beginning of the war with the French Revolution, journalism took a new tone of responsibility and intelligence. The hacks of Grub Street were superseded by publicists of a high moral temper and literary excellence; and philosophers like Coleridge, or statesmen like Canning turned to influence public opinion through the columns of the Press.

But as yet these influences were feebly felt, and George the Third was able to set Chatham's policy disdainfully aside, and to plunge into a contest far more disastrous than his contest with the Press. In all the proceedings of the last few years, what had galled him most had been the act which averted a war between England and her colonies. To the King the Americans were already "rebels," and the great statesman whose eloquence had made their claims irresistible was a "trumpet of sedition." George deplored in his correspondence with his ministers the repeal of the Stamp Acts. "All men feel," he wrote, "that the fatal compliance in 1766 had increased the pretensions of the Americans to absolute independence." In America itself the news of the repeal had been received with universal joy, and taken as a close of the strife. But on both sides there remained a pride and irritability which only wise handling could have allayed; and in the present

state of English politics wise handling was impossible. Only a few months indeed passed before the quarrel was re-opened; for no sooner had the illness of Lord Chatham removed him in 1767 from any real share in public affairs, than the wretched administration which bore his name suspended the Assembly of New York on its refusal to provide quarters for English troops, and resolved to assert British sovereignty by levying import duties of trivial amount at American ports. The Assembly of Massachusetts was dissolved on a trifling quarrel with its Governor, and Boston was occupied for a time by British soldiers. The remonstrances of the Legislatures of Massachusetts and Virginia, however, coupled with a fall in the funds, warned the Ministers of the dangerous course on which they had entered; and in 1769 the troops were withdrawn, and all duties, save one, abandoned. But the King insisted on retaining the duty on tea; and its retention was enough to prevent any thorough restoration of good feeling. A series of petty quarrels went on in almost every colony between the popular Assemblies and the Governors appointed by the Crown, and the colonists persisted in their agreement to import nothing from the mother-country. As yet however there was no prospect of serious strife. In America the influence of George Washington allayed the irritation of Virginia. Massachusetts contented itself with quarrelling with its Governor, and refusing to buy tea so long as the duty was levied. In England, even Grenville, though approving the retention of the duty in question, abandoned all dream of further taxation.

But the King was now supreme. The attack of Chatham in 1770 had completed the ruin of the Ministry. Those of his adherents who still clung to it resigned their posts; and were followed by the Duke of Grafton. All that remained were the Bedford faction and the dependents of the King; these were gathered under the former Chancellor of the Exchequer, Lord North, into a ministry which was in fact a mere cloak for the direction of public affairs by George himself. "Not only did he direct the minister," a careful observer tells us, "in all important matters of foreign and domestic policy, but he instructed him as to the management of debates in Parliament, suggested what motions should be made or opposed, and how measures should be carried. He reserved for himself

all the patronage, he arranged the whole cast of administration, settled the relative place and pretensions of ministers of State, law officers, and members of the household, nominated and promoted the English and Scotch judges, appointed and translated bishops and deans, and dispensed other preferments in the Church. He disposed of military governments, regiments, and commissions, and himself ordered the marching of troops. He gave and refused titles, honors and pensions." All this immense patronage was steadily used for the creation and maintenance in both Houses of Parliament of a majority directed by the King himself; and its weight was seen in the steady action of such a majority. It was seen yet more in the subjection to which the ministry that bore North's name was reduced. George was in fact the minister through the twelve years of its existence, from 1770 till the close of the American war; and the shame of the darkest hour of English history lies wholly at his door.

His fixed purpose was to seize on the first opportunity of undoing the "fatal compliance of 1766." A trivial riot gave him the handle he wanted. In December, 1773, the arrival of some English ships laden with tea kindled fresh irritation in Boston, where the non-importation agreement was strictly enforced. A mob in the disguise of Indians boarded the vessels and flung their contents into the sea. The outrage was deplored alike by the friends of America in England and by its own leading statesmen; and both Washington and Chatham were prepared to support the Government in its looked-for demand of redress. But the thought of the King was not of redress but of repression, and he set roughly aside the more conciliatory proposals of Lord North and his fellow-ministers. They had already rejected as "frivolous and vexatious" a petition of the Assembly of Massachusetts for the dismissal of two public officers whose letters home advised the withdrawal of free institutions from the Colonies. They now seized on the riot as a pretext for rigorous measures. A bill introduced into Parliament in the beginning of 1774 punished Boston by closing its port against all commerce. Another punished the State of Massachusetts by withdrawing the liberties it had enjoyed ever since the Pilgrim Fathers landed on its soil. Its charter was altered. The choice of its Council was transferred from the people to the Crown, and the nomination of

its judges was transferred to the Governor. In the Governor, too, by a provision more outrageous than even these, was vested the right of sending all persons charged with a share in the late disturbances to England for trial. To enforce these measures of repression troops were sent to America, and General Gage, the commander-in-chief there, was appointed Governor of Massachusetts. The King's exultation at the prospect before him was unbounded. "The die," he wrote triumphantly to his minister, "is cast. The Colonies must either triumph or submit." Four regiments would be enough to bring the Americans to their senses. They would only be "lions while we are lambs." "If we take the resolute part," he decided solemnly, "they will undoubtedly be very meek." Unluckily, the blow at Massachusetts was received with anything but meekness. The jealousies between State and State were hushed by the sense that the liberties of all were in danger. If the British Parliament could cancel the charter of Massachusetts and ruin the trade of Boston, it could cancel the charter of every colony and ruin the trade of every port from the St. Lawrence to the coast of Georgia. All therefore adopted the cause of Massachusetts; and all their Legislatures, save that of Georgia, sent delegates to a Congress which assembled on the 4th of September at Philadelphia. Massachusetts took a yet bolder course. Not a citizen would act under the new laws. Its Assembly met in defiance of the Governor, called out the militia of the State, and provided arms and ammunition for it. But there was still room for reconciliation. The resolutions of the Congress had been moderate; for Virginia was the wealthiest and most influential among the States who sent delegates; and though resolute to resist the new measures of the Government, Virginia still clung to the mother country. At home, the merchants of London and Bristol pleaded loudly for reconciliation; and in January, 1775, Chatham again came forward to avert a strife he had once before succeeded in preventing. With characteristic largeness of feeling he set aside all half-measures or proposals of compromise. "It is not cancelling a piece of parchment," he insisted, "that can win back America: you must respect her fears and her resentments." The bill which he introduced in concert with Franklin provided for the repeal of the late acts and for the security of the colonial charters, abandoned

the claim to taxation, and ordered the recall of the troops. A colonial assembly was directed to meet and provide means by which America might contribute towards the payment of the public debt.

Chatham's measure was contemptuously rejected by the Lords, as was a similar measure of Burke's by the Commons, and a petition of the City of London in favor of the Colonies by the King himself. With the rejection of these efforts at reconciliation began the great struggle which ended eight years later in the severance of the American Colonies from the British Crown. The Congress of delegates from the Colonial Legislatures at once voted measures for general defence, ordered the levy of an army, and set George Washington at its head. No nobler figure ever stood in the forefront of a nation's life. Washington was grave and courteous in address; his manners were simple and unpretending; his silence and the serene calmness of his temper spoke of a perfect self-mastery; but there was little in his outer bearing to reveal the grandeur of soul which lifts his figure, with all the simple majesty of an ancient statue, out of the smaller passions, the meaner impulses of the world around him. What recommended him for command was simply his weight among his fellow-landowners of Virginia, and the experience of war which he had gained by service in border contests with the French and the Indians, as well as in Braddock's luckless expedition against Fort Duquesne. It was only as the weary fight went on that the colonists learned little by little the greatness of their leader, his clear judgment, his heroic endurance, his silence under difficulties, his calmness in the hour of danger or defeat, the patience with which he waited, the quickness and hardness with which he struck, the lofty and serene sense of duty that never swerved from its task through resentment or jealousy, that never through war or peace felt the touch of a meaner ambition, that knew no aim save that of guarding the freedom of his fellow-countrymen, and no personal longing save that of returning to his own fireside when their freedom was secured. It was almost unconsciously that men learned to cling to Washington with a trust and faith such as few other men have won, and to regard him with a reverence which still hushes us in presence of his memory. Even America hardly recognized his real greatness till death set its seal on

"the man first in war, first in peace, and first in the hearts of his fellow-countrymen." Washington more than any of his fellow-colonists represented the clinging of the Virginian landowners to the mother-country, and his acceptance of the command proved that even the most moderate among them had no hope now save in arms. The struggle opened with a skirmish between a party of English troops and a detachment of militia at Lexington, and in a few days twenty thousand colonists appeared before Boston. The Congress re-assembled, declared the States they represented "The United Colonies of America," and undertook the work of government. Meanwhile ten thousand fresh troops landed at Boston; but the provincial militia seized the neck of ground which joins it to the mainland, and though they were driven from the heights of Bunker's Hill which commanded the town, it was only after a desperate struggle in which their bravery put an end forever to the taunts of cowardice which had been levelled against the colonists. "Are the Yankees cowards?" shouted the men of Massachusetts, as the first English attack rolled back baffled down the hill-side. But a far truer courage was shown in the stubborn endurance with which Washington's raw militiamen, who gradually dwindled from sixteen thousand to ten, ill fed, ill armed, and with but forty-five rounds of ammunition to each man, cooped up through the winter a force of ten thousand veterans in the lines of Boston. The spring of 1776 saw them force these troops to withdraw from the city to New York, where the whole British army, largely reinforced by mercenaries from Germany, was concentrated under General Howe. Meanwhile a raid of the American General, Arnold, nearly drove the British troops from Canada; and though his attempt broke down before Quebec, it showed that all hope of reconciliation was over. The Colonies of the south, the last to join in the struggle, had in fact expelled their Governors at the close of 1775; at the opening of the next year Massachusetts instructed its delegates to support a complete repudiation of the King's government by the Colonies; while the American ports were thrown open to the world in defiance of the Navigation Acts. These decisive steps were followed by the great act with which American history begins, the adoption on the 4th of July, 1776, by the delegates in Congress of a Declaration of Independence. "We," ran its solemn

words, "the representatives of the United States of America in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, solemnly publish and declare that these United Colonies are, and of right ought to be, Free and Independent States."

The earlier successes of the Colonists were soon followed by suffering and defeat. Howe, an active general with a fine army at his back, cleared Long Island in August by a victory at Brooklyn; and Washington, whose army was weakened by withdrawals and defeat, and disheartened by the loyal tone of the State in which it was encamped, was forced to evacuate New York and New Jersey, and to fall back first on the Hudson and then on the Delaware. The Congress prepared to fly from Philadelphia, and a general despair showed itself in cries of peace. But a well-managed surprise and a daring march on the rear of Howe's army restored the spirits of Washington's men, and forced the English general in his turn to fall back on New York. The campaign of 1777 opened with a combined effort for the suppression of the revolt. An army assembled in Canada under General Burgoyne marched by way of the Lakes to seize the line of the Hudson, and with help from the army at New York to cut off New England from her sister provinces. Howe meanwhile sailed up the Chesapeake, and advanced on Philadelphia, the temporary capital of the United States and the seat of the Congress. The rout of his little army of seven thousand men at Brandywine forced Washington to abandon Philadelphia, and, after a bold but unsuccessful attack on his victors, to retire into winter quarters on the banks of the Schuylkill; where the unconquerable resolve with which he nerved his handful of beaten and half-starved troops to face Howe's army in their camp at Valley Forge is the noblest of his triumphs. But in the north the war had taken another color. When Burgoyne appeared on the Upper Hudson he found the road to Albany barred by an American force under General Gates. The spirit of New England, which had grown dull as the war rolled away from its borders, quickened again at the news of invasion and of the outrages committed by the Indians whom Burgoyne employed among his troops. Its militia hurried from town and homestead to the camp; and after a fruitless attack on the American lines, Burgoyne saw himself surrounded on the heights

of Saratoga. On the 17th of October he was compelled to surrender. The news of this calamity gave force to the words with which Chatham at the very time of the surrender was pressing for peace. "You cannot conquer America," he cried when men were glorying in Howe's successes. "If I were an American as I am an Englishman, while a foreign troop was landed in my country, I would never lay down my arms—never, never, never!" Then in a burst of indignant eloquence he thundered against the use of the Indian and his scalping-knife as allies of England against her children. The proposals which Chatham brought forward might perhaps, in his hands, even yet have drawn America and the mother-country together. His plan was one of absolute conciliation, and a federal union between the settlements and Great Britain which would have left the Colonies absolutely their own masters in all matters of internal government, and linked only by ties of affection and loyalty to the general body of the Empire. But it met with the same fate as his previous proposals. Its rejection was at once followed by the news of Saratoga, and by the yet more fatal news that this disaster had roused the Bourbon Courts to avenge the humiliation of the Seven Years' War. In February, 1778, France concluded an alliance with the States. Lord North strove to meet the blow by fresh offers of conciliation, and by a pledge to renounce forever the right of direct taxation over the Colonies; but he felt that the time for conciliation was past, while all hope of reducing America by force of arms had disappeared. George indeed was as obstinate for war as ever; and the country, stung to the quick by the attack of France, backed passionately the obstinacy of the King. But, unlike George the Third, it instinctively felt that if a hope still remained of retaining the friendship of the Colonies, and of baffling the efforts of the Bourbons, it lay in Lord Chatham; and in spite of the King's resistance the voice of the whole country called him back to power. But on the eve of his return to office this last chance was shattered by the hand of death. Broken with age and disease, the Earl was borne to the House of Lords to utter in a few broken words his protest against the proposal to surrender America. "I rejoice," he murmured, "that I am still alive to lift up my voice against the dismemberment of this ancient and noble monarchy. His Majesty succeeded to an Empire as great in

extent as its reputation was unsullied. Seventeen years ago this people was the terror of the world." He listened impatiently to the reply of the Duke of Richmond, and again rose to his feet. But he had hardly risen when he pressed his hand upon his heart, and falling back in a swoon was borne home to die.

From the hour of Chatham's death England entered on a conflict with enemies whose circle gradually widened till she stood single-handed against the world. At the close of 1778 Spain joined the league of France and America against her; and in the next year the joint fleets of the two powers rode the masters of the Channel. They even threatened a descent on the English coast. But dead as Chatham was, his cry woke a new life in England. "Shall we fall prostrate," he exclaimed with his last breath, "before the House of Bourbon?" and the divisions which had broken the nation in its struggle with American liberty were hushed in the presence of this danger to its own existence. The weakness of the Ministry was compensated by the energy of England itself. For three years, from 1779 to 1782, General Elliott held against famine and bombardment the rock fortress of Gibraltar. Although a quarrel over the right of search banded Holland and the Courts of the North in an armed neutrality against her, and added the Dutch fleet to the number of her assailants, England held her own at sea. Even in America the fortune of the war seemed to turn. After Burgoyne's surrender the English generals had withdrawn from Pennsylvania, and bent all their efforts on the South where a strong royalist party still existed. The capture of Charleston and the successes of Lord Cornwallis in 1780 were rendered fruitless by the obstinate resistance of General Greene; but the States were weakened by bankruptcy, and unnerved by hopes of aid from France. Meanwhile England was winning new triumphs in the East.

Since the day of Plassey, India had been fast passing into the hands of the merchant company whose traders but a few years before held only three petty factories along its coast. The victory which laid Bengal at the feet of Clive had been followed in 1760 by a victory at Wandewash, in which Colonel Coote's defeat of Lally, the French Governor of Pondicherry, established British supremacy over Southern India. The

work of organization had soon to follow on that of conquest; for the tyranny and corruption of the merchant-clerks who suddenly found themselves lifted into rulers was fast ruining the province of Bengal; and although Clive had profited more than any other by the spoils of his victory, he saw that the time had come when greed must give way to the responsibilities of power. In 1765 he returned to India, and the two years of his rule were in fact the most glorious years in his life. In the teeth of opposition from every clerk and of mutiny throughout the army he put down the private trading of the Company's servants and forbade their acceptance of gifts from the natives. Clive set an example of disinterestedness by handing over to public uses a legacy which had been left him by the prince he had raised to the throne of Bengal; and returned poorer than he went to face the storm his acts had roused among those who were interested in Indian abuses at home. His unsparing denunciations of the misgovernment of Bengal at last stirred even Lord North to interfere; and when the financial distress of the Company drove it for aid to Government, the grant of aid was coupled with measures of administrative reform. The Regulating Act of 1773 established a Governor-General and a Supreme Court of Judicature for all British possessions in India, prohibited judges and members of Council from trading, forbade any receipt of presents from natives, and ordered that every act of the Directors should be signified to the Government to be approved or disallowed. The new interest which had been aroused in the subject of India was seen in an investigation of the whole question of its administration by a Committee of the House of Commons. Clive's own early acts were examined with unsparing severity. His bitter complaint in the Lords that, Baron of Plassey as he was, he had been arraigned like a sheep-stealer, failed to prevent the passing of resolutions which censured the corruption and treachery of the early days of British rule in India. Here, however, the justice of the House stopped. When his accusers passed from the censure of Indian misgovernment to the censure of Clive himself, the memory of his great deeds won from the House of Commons a unanimous vote, "That Robert Lord Clive did at the same time render great and meritorious services to his country."

By the Act of 1773 Warren Hastings was named Governor-

General of Bengal, with powers of superintendence and control over the other presidencies. Hastings was sprung of a noble family which had long fallen into decay, and poverty had driven him in boyhood to accept a writership in the Company's service. Clive, whose quick eye discerned his merits, drew him after Plassey into political life; and the administrative ability he showed, during the disturbed period which followed, raised him step by step to the post of Governor of Bengal. No man could have been better fitted to discharge the duties of the new office which the Government at home had created without a thought of its real greatness. Hastings was gifted with rare powers of organization and control. His first measure was to establish the direct rule of the Company over Bengal by abolishing the government of its native princes, which, though it had become nominal, hindered all plans for effective administration. The Nabob sank into a pensionary, and the Company's new province was roughly but efficiently organized. Out of the clerks and traders about him Hastings formed that body of public servants which still remains the noblest product of our rule in India. The system of law and finance which he devised, hasty and imperfect as it necessarily was, was far superior to any that India had ever seen. Corruption he put down with as firm a hand as Clive's, but he won the love of the new "civilians" as he won the love of the Hindoos. Although he raised the revenue of Bengal and was able to send home every year a surplus of half a million to the Company, he did this without laying a fresh burden on the natives or losing their good-will. His government was guided by an intimate knowledge of and sympathy with the people. At a time when their tongue was looked on simply as a medium of trade and business, Hastings was skilled in the languages of India; he was versed in native customs, and familiar with native feeling. We can hardly wonder that his popularity with the Bengalese was such as no later ruler has ever attained, or that after a century of great events Indian mothers still hush their infants with the name of Warren Hastings.

As yet, though English influence was great in the south, Bengal alone was directly in English hands. Warren Hastings recognized a formidable danger to the power of Britain in that of the Mahrattas, freebooters of Hindoo blood whose tribes

had for a century past carried their raids over India from the hills of the western coast, and founded sovereignties in Guzerat, Malwa, and Tanjore, and who were bound by a slight tie of subjection to the Mahratta chief who reigned at Poonah. The policy of Hastings was to prevent the Mahrattas from over-running the whole of India, and taking the place which the Mogul Emperors had occupied. He bound native princes, as in Oudh or Berar, by treaties and subsidies, crushed without scruple the Rohillas to strengthen his ally the Nabob Vizier of Oudh, and watched with incessant jealousy the growth of powers even as distant as the Sikhs. The jealousy of France sought in the Mahrattas a counterpoise to the power of Britain, and through their chieftain the French envoys were able to set the whole confederacy in motion against the English presidencies. The danger was met by Hastings with characteristic swiftness of resolve. His difficulties were great. For two years he had been rendered powerless through the opposition of his Council; and when freed from this obstacle the Company pressed him incessantly for money, and the Crown more than once strove to recall him. His own general, Sir Eyre Coote, was miserly, capricious, and had to be humored like a child. Censures and complaints reached him with every mail. But his calm self-command never failed. No trace of his embarrassments showed itself in his work. The war with the Mahrattas was pressed with a tenacity of purpose which the blunders of subordinates and the inefficiency of the soldiers he was forced to use never shook for a moment. Failure followed failure, and success had hardly been wrung from fortune when a new and overwhelming danger threatened from the south. A military adventurer, Hyder Ali, had built up a compact and vigorous empire out of the wreck of older principalities on the table-land of Mysore. Tyrant as he was, no native rule was so just as Hyder's, no statesmanship so vigorous. He was quickwitted enough to discern the real power of Britain, and only the wretched blundering of the Council of Madras forced him at last to the conclusion that war with the English was less dangerous than friendship with them. Old as he was, his generalship retained all its energy; and a disciplined army, covered by a cloud of horse and backed by a train of artillery, poured down in 1780 on the plain of the Carnatic. The small British force which met him was

driven into Madras, and Madras itself was in danger. The news reached Hastings when he was at last on the verge of triumph over the Mahrattas; but his triumph was instantly abandoned, a peace was patched up, and every soldier hurried to Madras. The appearance of Eyre Coote checked the progress of Hyder, and after a campaign of some months he was hurled back into the fastnesses of Mysore. India was the one quarter of the world where Britain lost nothing during the American war; and in the annexation of Benares, the extension of British rule along the Ganges, the reduction of Oudh to virtual dependence, the appearance of English armies in Central India, and the defeat of Hyder, the genius of Hastings laid the foundation of an Indian Empire.

But while England triumphed in the East, the face of the war in America was changed by a terrible disaster. Foiled in an attempt on North Carolina by the refusal of his fellow-general, Sir Henry Clinton, to assist him, Lord Cornwallis fell back in 1781 on Virginia, and entrenched himself in the lines of Yorktown. A sudden march of Washington brought him to the front of the English troops at a moment when the French fleet held at sea, and the army of Cornwallis was driven by famine to a surrender as humiliating as that of Saratoga. The news fell like a thunderbolt on the wretched Minister who had till now suppressed at his master's order his own conviction of the uselessness of further bloodshed. Opening his arms and pacing wildly up and down his room, Lord North exclaimed "It is all over," and resigned. England in fact seemed on the brink of ruin. In the crisis of the American struggle Ireland itself turned on her. A force of forty thousand volunteers had been raised in 1779 for the defence of the island against a French invasion. Threats of an armed revolt backed the eloquence of two Parliamentary leaders, Grattan and Flood, in their demand for the repeal of the Poynings' Act, which took all power of initiative legislation from the Irish Parliament, and for the recognition of the Irish House of Lords as an ultimate Court of Appeal. The demands were in effect a claim for national independence; but there were no means of resisting them, for England was without a soldier to oppose the volunteers. The fall of Lord North recalled the Whigs under Lord Rockingham to office; and on Rockingham fell the double task of satisfying Ireland and of putting

an end, at any cost, to the war with the United States. The task involved in both quarters a humiliating surrender; and it needed indeed the bitter stress of necessity to induce the Houses to follow his counsels. The English Parliament abandoned by a formal statute the judicial and legislative supremacy it had till then asserted over the Parliament of Ireland; and negotiations were begun with America and its allies. In the difficulties of England the hopes of her enemies rose high. Spain refused to suspend hostilities at any other price than the surrender of Gibraltar. France proposed that England should give up all her Indian conquests save Bengal. But the true basis of her world-power lay on the sea; and at this moment the command of the seas again became her own. Admiral Rodney, the greatest of English seamen save Nelson and Blake, had in January, 1780, encountered the Spanish fleet off Cape St. Vincent, and only four of its vessels escaped to Cadiz. Two years later the triumphs of the French Admiral De Grasse called him to the West Indies, and in April, 1782, a manœuvre which he was the first to introduce broke his opponent's line, and drove the French fleet shattered from the Atlantic. In September a last attack of the joint force gathered against Gibraltar was repulsed by the heroism of Elliott. Nor would America wait any longer for the satisfaction of her allies. In November her commissioners signed the preliminaries of a peace, in which Britain reserved to herself on the American continent only Canada and the island of Newfoundland, and acknowledged without reserve the independence of the United States. The treaty of peace with the United States was a prelude to treaties of peace with the Bourbon powers. France indeed won nothing in the treaties with which the war ended; Spain gained only Florida and Minorca. England, on the other hand, had won ground in India; she had retained Canada; her West Indian islands were intact; she had asserted her command of the seas. But at the close of the war there was less thought of what she had retained than of what she had lost. The American Colonies were irrecoverably gone. It is no wonder that in the first shock of such a loss England looked on herself as on the verge of ruin, or that the Bourbon Courts believed her position as a world-power to be practically at an end. How utterly groundless such a conception was the coming years were to show.

Section III.—The Second Pitt, 1783—1793.*

That in the creation of the United States the world had reached one of the turning points in its history seems at the time to have entered into the thought of not a single European statesman. What startled men most at the moment was the discovery that England herself was far from being ruined by the greatness of her defeat. She rose from it indeed stronger and more vigorous than ever. Never had she shown a mightier energy than in the struggle against France which followed only ten years after her loss of America, nor did she ever stand higher among the nations than on the day of Waterloo. Her real greatness, however, lay not in the old world but in the new. She was from that hour a mother of nations. In America she had begotten a great people, and her emigrant ships were still to carry on the movement of the Teutonic race from which she herself had sprung. Her work was to be colonization. Her settlers were to dispute Africa with the Kaffir and the Hottentot; they were to build up in the waters of the Pacific colonies as great as those which she had lost in America. And to the nations that she founded she was to give not only her blood and her speech, but the freedom which she had won. It is the thought of this which flings its grandeur round the pettiest details of our story in the past. The history of France has little result beyond France itself. German or Italian history has no direct issue outside the bounds of Germany or Italy. But England is only a small part of the outcome of English history. Its greater issues lie not within the narrow limits of the mother-island, but in the destinies of nations yet to be. The struggles of her patriots, the wisdom of her statesmen, the steady love of liberty and law in her people at large, were shaping in the past of our little island the future of mankind.

Meanwhile the rapid development of industrial energy and

* *Authorities.*—Mr. Massey's account of this period may be supplemented by Lord Stanhope's "Life of Pitt," Lord Russell's "Memoirs of Fox," and the Correspondence of Lord Malmesbury, Lord Auckland, and Mr. Rose. For the Slave Trade, see the Memoirs of Wilberforce by his sons. Burke may be studied in his Life by Macknight, in Mr. Morley's valuable essay on him, and above all in his own works. The state of foreign affairs in 1789 is best seen in Von Sybel's "History of the French Revolution."

industrial wealth in England itself was telling on the conditions of English statesmanship. Though the Tories and "King's friends" had now grown to a compact body of a hundred and fifty members, the Whigs, who held office under Lord Rockingham, were superior to their rivals in numbers and political character, now that the return of the Bedford section to the general body of the party during its steady opposition to the American war had restored much of its old cohesion. But this reunion only strengthened their aristocratic and exclusive tendencies, and widened the breach which was steadily opening on questions such as Parliamentary Reform, between the bulk of the Whig party and the small fragment which remained true to the more popular sympathies of Chatham. Lord Shelburne stood at the head of the Chatham party, and it was reinforced at this moment by the entry into Parliament of the second son of Chatham himself. William Pitt had hardly reached his twenty-second year; but he left college with the learning of a ripe scholar, and his ready and sonorous eloquence had been matured by his father's teaching. "He will be one of the first men in Parliament," said a member to the Whig leader, Charles Fox, after Pitt's first speech in the House of Commons. "He is so already," replied Fox. The haughty self-esteem of the new statesman breathed in every movement of his tall, spare figure, in the hard lines of a countenance which none but his closer friends saw lighted by a smile, in his cold and repulsive address, his invariable gravity of demeanor, and his habitual air of command. How great the qualities were which lay beneath this haughty exterior no one knew; nor had any one guessed how soon this "boy," as his rivals mockingly styled him, was to crush every opponent and to hold England at his will. He refused any minor post in the Rockingham administration, claiming, if he took office at all, to be at once admitted to the Cabinet. But Pitt had no desire to take office under Rockingham. To him as to Chatham the main lesson of the war was the need of putting an end to those abuses in the composition of Parliament by which George the Third had been enabled to plunge the country into it. A thorough reform of the House of Commons was the only effectual means of doing this, and Pitt brought forward a bill founded on his father's plans for that purpose. But the great bulk of the

Whigs could not resolve on the sacrifice of property and influence which such a reform would involve. Pitt's bill was thrown out; and in its stead the Ministry endeavored to weaken the means of corrupt influence which the King had unscrupulously used, by disqualifying persons holding government contracts from sitting in Parliament, by depriving revenue officers of the elective franchise (a measure which diminished the influence of the Crown in seventy boroughs), and above all by a bill for the reduction of the civil establishment, of the pension list, and of the secret service fund, which was brought in by Burke. These measures were to a great extent effectual in diminishing the influence of the Crown over Parliament, and they are memorable as marking the date when the direct bribery of members absolutely ceased. But they were absolutely inoperative in rendering the House of Commons really representative of or responsible to the people of England. The jealousy which the mass of the Whigs entertained of the Chatham section and its plans was more plainly shown on the death of Lord Rockingham in July. Shelburne was no sooner called to the head of the Ministry than Fox, who acted on personal grounds, and the bulk of Rockingham's followers resigned. Pitt on the other hand accepted office as Chancellor of the Exchequer.

The Shelburne Ministry only lasted long enough to conclude the final peace with the United States; for in the opening of 1783 it was overthrown by the most unscrupulous coalition known in our history, that of the Whig followers of Fox with the Tories who still clung to Lord North. Never had the need of representative reform been more clearly shown than by a coalition which proved how powerless was the force of public opinion to check even the most shameless faction in Parliament, how completely the lessening of the royal influence by the measures of Burke and Rockingham had tended to the profit, not of the people, but of the borough-mongers who usurped its representation. Pitt's renewed proposal of Parliamentary Reform was rejected by a majority of two to one. Secure in their Parliamentary majority, and heedless of the power of public opinion without the walls of the House of Commons, the new Ministers entered boldly on a greater task than had as yet taxed the constructive genius of English statesmen. To leave such a dominion as Warren Hastings

had built up in India to the control of a mere company of traders was clearly impossible; and Fox proposed to transfer the political government from the Directors of the Company to a board of seven Commissioners. The appointment of the seven was vested in the first instance in Parliament, and afterwards in the Crown; their office was to be held for five years, but they were removable on address from either House of Parliament. The proposal was at once met with a storm of opposition. The scheme indeed was an injudicious one; for the new Commissioners would have been destitute of that practical knowledge of India which belonged to the Company, while the want of any immediate link between them and the actual Ministry of the Crown would have prevented Parliament from exercising an effective control over their acts. But the real faults of this India Bill were hardly noticed in the popular outcry against it. The merchant-class was galled by the blow levelled at the greatest merchant-body in the realm: corporations trembled at the cancelling of a charter; the King viewed the measure as a mere means of transferring the patronage of India to the Whigs. With the nation at large the faults of the bill lay in the character of the Ministry which proposed it. To give the rule and patronage of India over to the existing House of Commons was to give a new and immense power to a body which misused in the grossest way the power it possessed. It was the sense of this popular feeling which encouraged the King to exert his personal influence to defeat the measure in the Lords, and on its defeat to order his Ministers to deliver up the seals. In December, 1783, Pitt accepted the post of First Lord of the Treasury; but his position would at once have been untenable had the country gone with its nominal representatives. He was defeated again and again by large majorities in the Commons; but the majorities dwindled as a shower of addresses from every quarter, from the Tory University of Oxford as from the Whig Corporation of London, proved that public opinion went with the Minister and not with the House. It was the general sense of this which justified Pitt in the firmness with which, in the teeth of addresses for his removal from office, he delayed the dissolution of Parliament for five months, and gained time for that ripening of national sentiment on which he counted for success. When the elections of 1784 came the struggle was

at once at an end. The public feeling had become strong enough to break through the corrupt influences which commonly governed its representation. Every great constituency returned supporters to Pitt; of the majority which had defeated him in the Commons a hundred and sixty members were unseated; and only a fragment of the Whig party was saved by its command of nomination boroughs.

When Parliament came together after the overthrow of the Coalition, the Minister of twenty-five was master of England as no Minister had been before. Even the King yielded to his sway, partly through gratitude for the triumph he had won for him over the Whigs, partly from a sense of the madness which was soon to strike him down, but still more from a gradual discovery that the triumph which he had won over his political rivals had been won, not to the profit of the Crown, but of the nation at large. The Whigs, it was true, were broken, unpopular, and without a policy, while the Tories clung to the Minister who had "saved the King." But it was the support of a new political power that really gave his strength to the young Minister. The sudden rise of English industry was pushing the manufacturer to the front; and all that the trading classes loved in Chatham, his nobleness of temper, his consciousness of power, his patriotism, his sympathy with a wider world than the world within the Parliament-house, they saw in his son. He had little indeed of the poetic and imaginative side of Chatham's genius, of his quick perception of what was just and what was possible, his far-reaching conceptions of national policy, his outlook into the future of the world. Pitt's flowing and sonorous commonplaces rang hollow beside the broken phrases which still make his father's eloquence a living thing to Englishmen. On the other hand he possessed some qualities in which Chatham was utterly wanting. His temper, though naturally ardent and sensitive, had been schooled in a proud self-command. His simplicity and good taste freed him from his father's ostentation and extravagance. Diffuse and commonplace as his speeches seem, they were adapted as much by their very qualities of diffuseness and commonplace as by their lucidity and good sense to the intelligence of the middle classes whom Pitt felt to be his real audience. In his love of peace, his immense industry, his despatch of business, his skill in debate, his

knowledge of finance, he recalled Sir Robert Walpole; but he had virtues which Walpole never possessed, and he was free from Walpole's worst defects. He was careless of personal gain. He was too proud to rule by corruption. His lofty self-esteem left no room for any jealousy of subordinates. He was generous in his appreciation of youthful merits; and the "boys" he gathered round him, such as Canning and Lord Wellesley, rewarded his generosity by a devotion which death left untouched. With Walpole's cynical inaction Pitt had no sympathy whatever. His policy from the first was one of active reform, and he faced every one of the problems, financial, constitutional, religious, from which Walpole had shrunk. Above all he had none of Walpole's scorn of his fellow-men. The noblest feature in his mind was its wide humanity. His love for England was as deep and personal as his father's love, but of the sympathy with English passion and English prejudice which had been at once his father's weakness and strength he had not a trace. When Fox taunted him with forgetting Chatham's jealousy of France and his faith that she was the natural foe of England, Pitt answered nobly that "to suppose any nation can be unalterably the enemy of another is weak and childish." The temper of the time and the larger sympathy of man with man, which especially marks the eighteenth century as a turning-point in the history of the human race, was everywhere bringing to the front a new order of statesmen, such as Turgot and Joseph the Second, whose characteristics were a love of mankind, and a belief that as the happiness of the individual can only be secured by the general happiness of the community to which he belongs, so the welfare of individual nations can only be secured by the general welfare of the world. Of these Pitt was one. But he rose high above the rest in the consummate knowledge, and the practical force which he brought to the realization of his aims.

Pitt's strength lay in finance; and he came forward at a time when the growth of English wealth made a knowledge of finance essential to a great minister. The progress of the nation was wonderful. Population more than doubled during the eighteenth century, and the advance of wealth was even greater than that of population. The war had added a hundred millions to the national debt, but the burden was hardly felt.

The loss of America only increased the commerce with that country; and industry had begun that great career which was to make Britain the workshop of the world. Though England already stood in the first rank of commercial states at the accession of George the Third, her industrial life at home was mainly agricultural. The wool-trade had gradually established itself in Norfolk, the West Riding of Yorkshire, and the counties of the southwest; while the manufacture of cotton was still almost limited to Manchester and Bolton, and remained so unimportant that in the middle of the eighteenth century the export of cotton goods hardly reached the value of fifty thousand a year. There was the same slow and steady progress in the linen trade of Belfast and Dundee, and the silks of Spitalfields. The processes of manufacture were too rude to allow any large increase of production. It was only where a stream gave force to turn a mill-wheel that the wool-worker could establish his factory; and cotton was as yet spun by hand in the cottages, the "spinsters" of the family sitting with their distaffs round the weaver's handloom. But had the process of manufacture been more efficient, they would have been rendered useless by the want of a cheap and easy means of transport. The older main roads, which had lasted fairly through the middle ages, had broken down in later times before the growth of traffic and the increase of wagons and carriages. The new lines of trade lay often along mere country lanes which had never been more than horse-tracks. Much of the woollen trade therefore had to be carried on by means of long trains of pack-horses; and in the case of yet heavier goods, such as coal, distribution was almost impracticable, save along the greater rivers or in districts accessible from the sea. A new era began when the engineering genius of Brindley joined Manchester with its port of Liverpool in 1767 by a canal which crossed the Irwell on a lofty aqueduct; the success of the experiment soon led to the universal introduction of water-carriage, and Great Britain was traversed in every direction by three thousand miles of navigable canals. At the same time a new importance was given to the coal which lay beneath the soil of England. The stores of iron which had lain side by side with it in the northern countries had lain there unworked through the scarcity of wood, which was looked upon as the only fuel by which it could be smelted. In the

middle of the eighteenth century a process for smelting iron with coal turned out to be effective; and the whole aspect of the iron-trade was at once revolutionized. Iron was to become the working material of the modern world; and it is its production of iron which more than all else has placed England at the head of industrial Europe. The value of coal as a means of producing mechanical force was revealed in the discovery by which Watt in 1765 transformed the Steam-Engine from a mere toy into the most wonderful instrument which human industry has ever had at its command. The invention came at a moment when the existing supply of manual labor could no longer cope with the demands of the manufacturers. Three successive inventions in twelve years, that of the spinning-jenny in 1764 by the weaver Hargreaves, of the spinning-machine in 1768 by the barber Arkwright, of the "mule" by the weaver Crompton in 1776, were followed by the discovery of the power-loom. But these would have been comparatively useless had it not been for the revelation of a new and inexhaustible labor-force in the steam-engine. It was the combination of such a force with such means of applying it that enabled Britain during the terrible years of her struggle with France and Napoleon to all but monopolize the woollen and cotton trades, and raised her into the greatest manufacturing country that the world had seen.

To deal wisely with such a growth required a knowledge of the laws of wealth which would have been impossible at an earlier time. But it had become possible in the days of Pitt. If books are to be measured by the effect which they have produced on the fortunes of mankind, the "Wealth of Nations" must rank among the greatest of books. Its author was Adam Smith, an Oxford scholar and a professor at Glasgow. Labor, he contended, was the one source of wealth, and it was by freedom of labor, by suffering the worker to pursue his own interest in his own way, that the public wealth would best be promoted. Any attempt to force labor into artificial channels, to shape by laws the course of commerce, to promote special branches of industry in particular countries, or to fix the character of the intercourse between one country and another, is not only a wrong to the worker or the merchant, but actually hurtful to the wealth of a state. The book was published in 1776, at the opening of the American War, and studied

by Pitt during his career as an undergraduate at Cambridge. From that time he owned Adam Smith for his master. He had hardly become Minister before he took the principles of the "Wealth of Nations" as the groundwork of his policy. The ten earlier years of his rule marked a new point of departure in English statesmanship. Pitt was the first English Minister who really grasped the part which industry was to play in promoting the welfare of the world. He was not only a peace Minister and a financier, as Walpole had been, but a statesman who saw that the best security for peace lay in the freedom and widening of commercial intercourse between nations; that public economy not only lessened the general burdens but left additional capital in the hands of industry; and that finance might be turned from a mere means of raising revenue into a powerful engine of political and social improvement.

That little was done by Pitt himself to carry these principles into effect was partly owing to the mass of ignorance and prejudice with which he had to contend, and still more to the sudden break of his plans through the French Revolution. His power rested above all on the trading classes, and these were still persuaded that wealth meant gold and silver, and that commerce was best furthered by jealous monopolies. It was only by patience and dexterity that the mob of merchants and country squires who backed him in the House of Commons could be brought to acquiesce in the changes he proposed. How small his power was when it struggled with the prejudices around him was seen in the failure of the first great measure he brought forward. The question of parliamentary reform which had been mooted during the American War had been steadily coming to the front. Chatham had advocated an increase of county members, who were then the most independent part of the Lower House. The Duke of Richmond talked of universal suffrage, equal electoral districts, and annual Parliaments. Wilkes anticipated the Reform Bill of a later time by proposing to disfranchise the rotten boroughs, and to give members in their stead to the counties and to the more populous and wealthy towns. William Pitt had made the question his own by bringing forward a motion for reform on his first entry into the House, and one of his first measures as Minister was to bring in a bill in 1785 which,

while providing for the gradual extinction of all decayed boroughs, disfranchised thirty-six at once, and transferred their members to counties. He brought the King to abstain from opposition, and strove to buy off the borough-mongers, as the holders of rotten boroughs were called, by offering to compensate them for the seats they lost at their market value. But the bulk of his own party joined the bulk of the Whigs in a steady resistance to the bill. The more glaring abuses, indeed, within Parliament itself, the abuses which stirred Chatham and Wilkes to action, had in great part disappeared. The bribery of members had ceased. Burke's Bill of Economical Reform had just dealt a fatal blow at the influence which the King exercised by suppressing a host of useless offices, household appointments, judicial and diplomatic charges, which were maintained for the purposes of corruption. Above all, the recent triumph of public opinion to which Pitt owed his power had done much to diminish the sense of any real danger from the opposition which Parliament had shown till now to the voice of the nation. "Terribly disappointed and beat" as Wilberforce tells us Pitt was by the rejection of his measure, the temper of the House and of the people was too plain to be mistaken, and though his opinion remained unaltered, he never brought it forward again.

The failure of his constitutional reform was more than compensated by the triumphs of his finance. When he entered office public credit was at its lowest ebb. The debt had been doubled by the American War, yet large sums remained unfunded, while the revenue was reduced by a vast system of smuggling which turned every coast-town into a nest of robbers. The deficiency was met for the moment by new taxes, but the time which was thus gained served to change the whole face of public affairs. The first of Pitt's financial measures—his plan for gradually paying off the debt by a sinking fund—was undoubtedly an error; but it had a happy effect in restoring public confidence. He met the smuggler by a reduction of Custom-duties which made his trade unprofitable. He revived Walpole's plan of an Excise. Meanwhile the public expenses were reduced, and commission after commission was appointed to introduce economy into every department of the public service. The rapid development of the national industry which we have already noted no doubt aided the success of

these measures. Credit was restored. The smuggling trade was greatly reduced. In two years there was a surplus of a million, and though duty after duty was removed the revenue rose steadily with every remission of taxation. Meanwhile Pitt was showing the political value of the new finance in a wider field. Ireland, then as now, was England's difficulty. The tyrannous misgovernment under which she had groaned ever since the battle of the Boyne was producing its natural fruit; the miserable land was torn with political faction, religious feuds and peasant conspiracies; and so threatening had the attitude of the Protestant party which ruled it become during the American War that they had forced the English Parliament to relinquish its control over their Parliament in Dublin. Pitt saw that much at least of the misery and disloyalty of Ireland sprang from its poverty. The population had grown rapidly while culture remained stationary and commerce perished. And of this poverty much was the direct result of unjust law. Ireland was a grazing country, but to protect the interest of English graziers the import of its cattle into England was forbidden. To protect the interests of English clothiers and weavers, its manufactures were loaded with duties. To redress this wrong was the first financial effort of Pitt, and the bill which he introduced in 1785 did away with every obstacle to freedom of trade between England and Ireland. It was a measure which, as he held, would "draw what remained of the shattered empire together," and repair in part the loss of America by creating a loyal and prosperous Ireland; and struggling almost alone in face of a fierce opposition from the Whigs and the Manchester merchants, he dragged it through the English Parliament, only to see amendments forced into it which insured its rejection by the Irish Parliament. But the defeat only spurred him to a greater effort elsewhere; France had been looked upon as England's natural enemy; but in 1787 he concluded a Treaty of Commerce with France which enabled the subjects of both countries to reside and travel in either without license or passport, did away with all prohibition of trade on either side, and reduced every import duty.

India owes to Pitt's triumph a form of government which remained unchanged to our own day. The India Bill which he carried in 1784 preserved in appearance the political and

commercial powers of the Directors, while establishing a Board of Control, formed from members of the Privy Council, for the approval or annulling of their acts. Practically, however, the powers of the Board of Directors were absorbed by a secret committee of three elected members of that body, to whom all the more important administrative functions had been reserved by the bill, while those of the Board of Control were virtually exercised by its President. As the President was in effect a new Secretary of State for the Indian Department, and became an important member of each Ministry, responsible like his fellow-members for his action to Parliament, the administration of India was thus made a part of the general system of the English Government; while the secret committee supplied the experience of Indian affairs in which the Minister might be deficient. Meanwhile the new temper that was growing up in the English people told on the attitude of England towards its great dependency. Discussions over rival plans of Indian administration diffused a sense of national responsibility for its good government, and there was a general resolve that the security against injustice and misrule which was enjoyed by the poorest Englishman should be enjoyed by the poorest Hindoo. The resolve expressed itself in the trial of Warren Hastings. Hastings returned from India at the close of the war with the hope of rewards as great as those of Clive. He had saved all that Clive had won. He had laid the foundations of a vast empire in the East. He had shown rare powers of administration, and the foresight, courage, and temperance which mark the born ruler of men. But the wisdom and glory of his rule could not hide its terrible ruthlessness. He was charged with having sold for a vast sum the services of British troops to crush the free tribes of the Rohillas, with having wrung half a million by extortion from the Rajah of Benares, with having extorted by torture and starvation more than a million from the Princesses of Oudh. He was accused of having kept his hold upon power by measures as unscrupulous, and with having murdered a native who opposed him by an abuse of the forms of English law. On almost all these charges the cooler judgment of later inquirers has acquitted Warren Hastings of guilt. Personally there can be little doubt that he had done much to secure to the new subjects of Britain a just and peaceable government. What was hardest and

most pitiless in his rule had been simply a carrying out of the system of administration which was native to India and which he found existing there. But such a system was alien from the new humanity of Englishmen; and few dared to vindicate Hastings when Burke in words of passionate earnestness moved for his impeachment. The great trial lingered on for years, and in the long run Hastings secured an acquittal. But the end at which the impeachment aimed had really been won. The attention, the sympathy of Englishmen had been drawn across distant seas to a race utterly strange to them; and the peasant of Cornwall or Cumberland had learned how to thrill at the suffering of a peasant of Bengal.

Even while the trial was going on a yet wider extension of English sympathy made itself felt. In the year which followed the adoption of free trade with France the new philanthropy allied itself with the religious movement created by the Wesleys in an attack on the Slave Trade. One of the profits which England bought by the triumphs of Marlborough was a right to a monopoly of the slave trade between Africa and the Spanish dominions; and it was England that had planted slavery in her American colonies and her West Indian islands. But the horrors and iniquity of the trade, the ruin and degradation of Africa which it brought about, the oppression of the negro himself, were now felt widely and deeply. "After a conversation in the open air at the root of an old tree, just above the steep descent into the Vale of Keston," with the younger Pitt, his friend, William Wilberforce, whose position as a representative of the evangelical party gave weight to his advocacy of such a cause, resolved in 1788 to bring in a bill for the abolition of the slave trade. But the bill fell before the opposition of the Liverpool slave merchants and the general indifference of the House of Commons. The spirit of humanity which breathed through Pitt's policy had indeed to wrestle with difficulties at home and abroad; and his efforts to sap the enmity of nation against nation by a freer intercourse encountered a foe even more fatal than English prejudice, in the very movement of which his measures formed a part. Across the Channel this movement was growing into a revolution which was to change the face of the world.

So far as England was concerned the Puritan resistance of the seventeenth century had in the end succeeded in check-

ing the general tendency of the time to religious and political despotism. Since the Revolution of 1688 freedom of conscience and the people's right to govern itself through its representatives in Parliament had been practically established. Social equality had begun long before. Every man from the highest to the lowest was subject to, and protected by, the same law. The English aristocracy, though exercising a powerful influence on government, were possessed of few social privileges, and prevented from forming a separate class in the nation by the legal and social tradition which counted all save the eldest son of a noble house as commoners. No impassable line parted the gentry from the commercial classes, and these again possessed no privileges which could part them from the lower classes of the community. Public opinion, the general sense of educated Englishmen, had established itself after a short struggle as the dominant element in English government. But in all the other great states of Europe the wars of religion had left only the name of freedom. Government tended to a pure despotism. Privilege was supreme in religion, in politics, in society. Society itself rested on a rigid division of classes from one another, which refused to the people at large any equal rights of justice or of industry. We have already seen how alien such a conception of national life was from the ideas which the wide diffusion of intelligence during the eighteenth century was spreading throughout Europe; and in almost every country some enlightened rulers endeavored by administrative reforms in some sort to satisfy the sense of wrong which was felt around them. The attempts of sovereigns like Frederick the Great in Prussia, and Joseph the Second in Austria and the Netherlands, were rivalled by the efforts of statesmen such as Turgot in France. It was in France indeed that the contrast between the actual state of society and the new ideas of public right was felt most keenly. Nowhere had the victory of the Crown been more complete. The aristocracy had been robbed of all share in public affairs; it enjoyed social privileges and exemption from any contribution to the public burdens, without that sense of public duty which a governing class to some degree always possesses. Guilds and monopolies fettered the industry of the trader and the merchant, and cut them off from the working classes, as the value attached to noble blood cut off both from the aristocracy.

If its political position indeed were compared with that of most of the countries round it, France stood high. Its government was less oppressive, its general wealth was larger and more evenly diffused, there was a better administration of justice, and a greater security for public order. Poor as its peasantry seemed to English eyes, they were far above the peasants of Germany or Spain. Its middle class was the quickest and most intelligent in Europe. Under Louis the Fifteenth opinion was practically free; and a literary class had sprung up which devoted itself with wonderful brilliancy and activity to popularizing the ideas of social and political justice which it learned from English writers, and in the case of Montesquieu and Voltaire from personal contact with English life. The moral conceptions of the time, its love of mankind, its sense of human brotherhood, its hatred of oppression, its pity for the guilty and the poor, its longing after a higher and nobler standard of life and action, were expressed by a crowd of writers, and above all by Rousseau, with a fire and eloquence which carried them to the heart of the people. But this new force of intelligence only jostled roughly with the social forms with which it found itself in contact. The philosopher denounced the tyranny of the priesthood. The peasant grumbled at the lord's right to judge him in his courts and to exact feudal services from him. The merchant was galled by the trading restrictions and the heavy taxation. The country gentry rebelled against their exclusion from public life and from the government of the country. Its powerlessness to bring about any change at home turned all this new energy into sympathy with a struggle against tyranny abroad. Public opinion forced France to ally itself with America in its contest for liberty, and French volunteers under the Marquis de Lafayette joined Washington's army. But while the American War spread more widely throughout the nation the craving for freedom, it brought on the Government financial embarrassment from which it could only free itself by an appeal to the country at large. Louis the Sixteenth resolved to summon the States-General, which had not met since the time of Richelieu, and to appeal to the nobles to waive their immunity from taxation. His resolve at once stirred into vigorous life every impulse and desire which had been seething in the minds of the people; and the States-General no sooner met at Ver-

sailles in May, 1789, than the fabric of despotism and privilege began to crumble. A rising in Paris destroyed the Bastille, and the capture of this fortress was taken for the sign of a new era of constitutional freedom in France and through Europe. Even in England men thrilled with a strange joy at the tidings of its fall. "How much is this the greatest event that ever happened in the world," Fox cried with a burst of enthusiasm, "and how much the best!"

Pitt regarded the approach of France to sentiments of liberty which had long been familiar to England with greater coolness, but with no distrust. For the moment indeed his attention was distracted by an attack of madness which visited the King in 1788, and by the claim of a right to the Regency which was at once advanced by the Prince of Wales. The Prince belonged to the Whig party; and Fox, who was travelling in Italy, hurried home to support his claim, in full belief that the Prince's Regency would be followed by his own return to power. Pitt successfully resisted it on the constitutional ground that in such a case the right to choose a temporary regent, under what limitations it would, lay with Parliament; and a bill which conferred the Regency on the Prince, in accordance with this view, was already passing the Houses when the recovery of the King put an end to the long dispute. Foreign difficulties, too, absorbed Pitt's attention. Russia had risen into greatness under Catharine the Second; and Catharine had resolved from the first on the annexation of Poland, the expulsion of the Turks from Europe, and the setting up of a Russian throne at Constantinople. In her first aim she was baffled for the moment by Frederick the Great. She had already made herself virtually mistress of the whole of Poland, her armies occupied the kingdom, and she had seated a nominee of her own on its throne, when Frederick in union with the Emperor Joseph the Second forced her to admit Germany to a share of the spoil. If the Polish partition of 1773 brought the Russian frontier westward to the upper waters of the Dwina and the Dnieper, it gave Galicia to Maria Theresa, and West Prussia to Frederick himself. Foiled in her first aim, she waited for the realization of her second till the alliance between the two German powers was at an end through the resistance of Prussia to Joseph's schemes for the annexation of Bavaria, and till the death of Frederick removed

her most watchful foe. Then in 1788 Joseph and the Empress joined hands for a partition of the Turkish Empire. But Prussia was still watchful, and England was no longer fettered as in 1773 by troubles with America. The friendship established by Chatham between the two countries, which had been suspended by Bute's treachery and all but destroyed during the Northern League of Neutral Powers, had been restored by Pitt through his co-operation with Frederick's successor in the restoration of the Dutch Stadholderate. Its political weight was now seen in the alliance of England, Prussia and Holland in 1789 for the preservation of the Turkish Empire. A great European struggle seemed at hand; and in such a struggle the sympathy and aid of France was of the highest importance. But with the treaty the danger passed away. In the spring of 1790 Joseph died broken-hearted at the failure of his plans and the revolt of the Netherlands against his innovations; and Austria practically withdrew from the war with the Turks.

Meanwhile in France things moved fast. By breaking down the division between its separate orders the States-General became a National Assembly, which abolished the privileges of the provincial parliaments, of the nobles, and the Church. In October the mob of Paris marched on Versailles and forced the King to return with them to the capital; and a Constitution hastily put together was accepted by Louis the Sixteenth in the stead of his old despotic power. To Pitt the tumult and disorder with which these great changes were wrought seemed transient matters. In January, 1790, he still believed that "the present convulsions in France must sooner or later culminate in general harmony and regular order," and that when her own freedom was established, "France would stand forth as one of the most brilliant powers of Europe." But the coolness and good-will with which Pitt looked on the Revolution was far from being universal in the nation at large. The cautious good sense of the bulk of Englishmen, their love of order and law, their distaste for violent changes and for abstract theories, as well as their reverence for the past, were fast rousing throughout the country a dislike of the revolutionary changes which were hurrying on across the Channel; and both the political sense and the political prejudice of the nation were being fired by the warnings

of Edmund Burke. The fall of the Bastille, though it kindled enthusiasm in Fox, roused in Burke only distrust. "Whenever a separation is made between liberty and justice," he wrote a few weeks later, "neither is safe." The night of the fourth of August, when the privileges of every class were abolished, filled him with horror. He saw, and rightly saw, in it the critical moment which revealed the character of the Revolution, and his part was taken at once. "The French," he cried in January, while Pitt was foretelling a glorious future for the new Constitution, "the French have shown themselves the ablest architects of ruin who have hitherto existed in the world. In a short space of time they have pulled to the ground their army, their navy, their commerce, their arts and their manufactures." But in Parliament Burke stood alone. The Whigs, though distrustfully, followed Fox in his applause of the Revolution. The Tories, yet more distrustfully, followed Pitt; and Pitt warmly expressed his sympathy with the constitutional government which was ruling France. At this moment indeed the revolutionary party gave a signal proof of its friendship for England. Irritated by an English settlement at Nootka Sound in California, Spain appealed to France for aid in accordance with the Family Compact: and the French Ministry, with a party at its back which believed things had gone far enough, resolved on a war as the best means of checking the progress of the Revolution and restoring the power of the Crown. The revolutionary party naturally opposed this design; after a bitter struggle the right of declaring war, save with the sanction of the Assembly, was taken from the King; and all danger of hostilities passed away. "The French Government," Pitt asserted, "was bent on cultivating the most unbounded friendship for Great Britain," and he saw no reason in its revolutionary changes why Britain should not return the friendship of France. He was convinced that nothing but the joint action of France and England would in the end arrest the troubles of Eastern Europe. His intervention foiled for the moment a fresh effort of Prussia to rob Poland of Dantzic and Thorn. But though Russia was still pressing Turkey hard, a Russian war was so unpopular in England that a hostile vote in Parliament forced Pitt to discontinue his armaments; and a fresh union of Austria and Prussia, which promised at this juncture to bring about a

close of the Turkish struggle, promised also a fresh attack on the independence of Poland.

But while Pitt was pleading for friendship between the two countries Burke was resolved to make friendship impossible. He had long ceased, indeed, to have any hold over the House of Commons. The eloquence which had vied with that of Chatham during the discussions on the Stamp Act had become distasteful to the bulk of its members. The length of his speeches, the profound and philosophical character of his argument, the splendor and often the extravagance of his illustrations, his passionate earnestness, his want of temper and discretion, wearied and perplexed the squires and merchants about him. He was known at last as "the dinner-bell of the House," so rapidly did its benches thin at his rising. For a time his energies found scope in the impeachment of Hastings; and the grandeur of his appeals to the justice of England hushed detraction. But with the close of the impeachment his repute had again fallen; and the approach of old age, for he was now past sixty, seemed to counsel retirement from an assembly where he stood unpopular and alone. But age and disappointment and loneliness were all forgotten as Burke saw rising across the Channel the embodiment of all that he hated—a Revolution founded on scorn of the past, and threatening with ruin the whole social fabric which the past had reared; the ordered structure of classes and ranks crumbling before a doctrine of social equality; a State rudely demolished and reconstituted; a Church and a Nobility swept away in a night. Against the enthusiasm of what he rightly saw to be a new political religion he resolved to rouse the enthusiasm of the old. He was at once a great orator and a great writer; and now that the House was deaf to his voice, he appealed to the country by his pen. The "Reflections on the French Revolution," which he published in October, 1790, not only denounced the acts of rashness and violence which sullied the great change that France had wrought, but the very principles from which the change had sprung. Burke's deep sense of the need of social order, of the value of that continuity in human affairs "without which men would become like flies in a summer," blinded him to all but the faith in mere rebellion, and the yet sillier faith in mere novelty, which disguised a real nobleness of aim and temper even in the most ardent of the revolutionists.

He would see no abuses in the past, now that it had fallen, or anything but the ruin of society in the future. He preached a crusade against men whom he regarded as the foes of religion and civilization, and called on the armies of Europe to put down a Revolution whose principles threatened every state with destruction.

The great obstacle to such a crusade was Pitt: and one of the grandest outbursts of the "Reflections" closed with a bitter taunt at the Minister's policy. "The age of chivalry," Burke cried, "is gone; that of sophisters, economists, and calculators has succeeded, and the glory of Europe is extinguished forever." But neither taunt nor invective moved Pitt from his course. At the moment when the "Reflections" appeared he gave fresh assurance to France of his resolve to have nothing to do with any crusade against the Revolution. "This country," he wrote, "means to persevere in the neutrality hitherto scrupulously observed with respect to the internal dissensions of France; and from which it will never depart unless the conduct held there makes it indispensable as an act of self-defence." So far indeed was he from sharing the reactionary panic which was spreading around him that he chose his time for supporting Fox in his Libel Act, a measure which, by transferring the decision on what was libellous in any publication from the judge to the jury, completed the freedom of the press; and himself passed a Bill which, though little noticed among the storms of the time, was one of the noblest of his achievements. He boldly put aside the dread which had been roused by the American War, that the gift of self-government to our colonies would serve only as a step towards their secession from the mother-country, and establish a House of Assembly and a Council in the two Canadas. "I am convinced," said Fox (who, however, differed from Pitt as to the nature of the Constitution to be given to Canada), "that the only method of retaining distant colonies with advantage is to enable them to govern themselves;" and the policy of the one statesman and the foresight of the other have been justified by the later history of our dependencies. Nor had Burke better success with his own party. Fox remained an ardent lover of the Revolution, and answered a fresh attack of Burke upon it with more than usual warmth. A close affection had bound till now the two men together;

but the fanaticism of Burke declared it at an end. "There is no loss of friendship," Fox exclaimed, with a sudden burst of tears. "There is!" Burke repeated. "I know the price of my conduct. Our friendship is at an end." Within the walls of Parliament, Burke stood utterly alone. His "Appeal from the New to the old Whigs," in June, 1791, failed to detach a follower from Fox. Pitt coldly counselled him rather to praise the English Constitution than to rail at the French. "I have made many enemies and few friends," Burke wrote sadly to the French princes who had fled from their country and were gathering in arms at Coblenz, "by the part I have taken." But the opinion of the people was slowly drifting to his side. A sale of thirty thousand copies showed that the "Reflections" echoed the general sentiment of Englishmen. The mood of England indeed at this moment was unfavorable to any fair appreciation of the Revolution across the Channel. Her temper was above all industrial. Men who were working hard and fast growing rich, who had the narrow and practical turn of men of business, looked angrily at this sudden disturbance of order, this restless and vague activity, these rhetorical appeals to human feeling, these abstract and often empty theories. In England it was a time of political content and social well-being, of steady economic progress, and of a powerful religious revival; and an insular lack of imaginative interest in other races hindered men from seeing that every element of this content, of this order, of this peaceful and harmonious progress, of this reconciliation of society and religion, was wanting abroad. The sympathy which the Revolution had roused at first among the Englishmen died away before the violence of its legislative changes, and the growing anarchy of the country. Sympathy in fact was soon limited to a few groups of reformers who gathered in "Constitutional Clubs," and whose reckless language quickened the national reaction. But in spite of Burke's appeals and the cries of the nobles who had fled from France and longed only to march against their country, Europe held back from war, and Pitt preserved his attitude of neutrality, though with a greater appearance of reserve.

So anxious, in fact, did the aspect of affairs in the East make Pitt for the restoration of tranquillity in France, that he foiled a plan which its emigrant nobles had formed for a

descent on the French coast, and declared formally at Vienna that England would remain absolutely neutral should hostilities arise between France and the Emperor. But the Emperor was as anxious to avoid a French war as Pitt himself. Though Catharine, now her strife with Turkey was over, wished to plunge the two German Powers into a struggle with the Revolution which would leave her free to annex Poland single-handed, neither Leopold nor Prussia would tie their hands by such a contest. The flight of Louis the Sixteenth from Paris in June, 1791, brought Europe for a moment to the verge of war; but he was intercepted and brought back; and for a while the danger seemed to incline the revolutionists in France to greater moderation. Louis too not only accepted the Constitution, but pleaded earnestly with the Emperor against any armed intervention as certain to bring ruin to his throne. In their conference at Pillnitz, therefore, in August, Leopold and the King of Prussia contented themselves with a vague declaration inviting the European powers to co-operate in restoring a sound form of government in France, availed themselves of England's neutrality to refuse all military aid to the French princes, and dealt simply with the affairs of Poland. But the peace they desired soon became impossible. The Constitutional Royalists in France availed themselves of the irritation caused by the Declaration of Pillnitz to rouse again the cry for a war which, as they hoped, would give strength to the throne. The more violent revolutionists, or Jacobins, on the other hand, under the influence of the "Girondists," or deputies from the south of France, whose aim was a republic, and who saw in a great national struggle a means of overthrowing the monarchy, decided in spite of the opposition of their leader, Robespierre, on a contest with the Emperor. Both parties united to demand the breaking up of an army which the emigrant princes had formed on the Rhine; and though Leopold assented to this demand, France declared war against his successor, Francis, in April, 1792.

Misled by their belief in a revolutionary enthusiasm in England, the French had hoped for her alliance in this war; and they were astonished and indignant at Pitt's resolve to stand apart from the struggle. It was in vain that Pitt strove to allay this irritation by demanding only that Holland should remain untouched, and promising neutrality even though

Belgium should be occupied by a French army, or that he strengthened these pledges by a reduction of military forces, and by bringing forward a peace-budget which rested on a large remission of taxation. The revolutionists still clung to the hope of England's aid in the emancipation of Europe, but they came now to believe that England must itself be emancipated before such an aid could be given. Their first work therefore they held to be the bringing about a revolution in England which might free the people from the aristocracy which held it down, and which oppressed, as they believed, great peoples beyond the bounds of England itself. To rouse India, to rouse Ireland to a struggle which should shake off the English yoke, became necessary steps to the establishment of freedom in England. From this moment therefore French agents were busy "sowing the revolution" in each quarter. In Ireland they entered into communication with the United Irishmen. In India they appeared at the courts of the native princes. In England itself they strove through the Constitutional Clubs to rouse the same spirit which they had roused in France; and the French envoy, Chauvelin, protested warmly against a proclamation which denounced this correspondence as seditious. The effect of these revolutionary efforts on the friends of the Revolution was seen in a declaration which they wrested from Fox, that at such a moment even the discussion of parliamentary reform was inexpedient. Meanwhile Burke was working hard, in writings whose extravagance of style was forgotten in their intensity of feeling, to spread alarm throughout Europe. He had from the first encouraged the emigrant princes to take arms, and sent his son to join them at Coblenz. "Be alarmists," he wrote to them; "diffuse terror!" But the royalist terror which he sowed had roused a revolutionary terror in France itself. At the threat of war against the Emperor the two German Courts had drawn together, and reluctantly abandoning all hope of peace with France, gathered eighty thousand men under the Duke of Brunswick, and advanced slowly in August on the Meuse. France, though she had forced on the struggle, was really almost defenceless; her forces in Belgium broke at the first shock of arms into shameful rout; and the panic spreading from the army to the nation at large, took violent and horrible forms. At the first news of Brunswick's advance the mob of

Paris broke into the Tuileries on the 10th of August; and at its demand Louis, who had taken refuge in the Assembly, was suspended from his office and imprisoned in the Temple. In September, while General Dumouriez by boldness and adroit negotiations arrested the progress of the allies in the defiles of the Argonne, bodies of paid murderers butchered the royalist prisoners who crowded the gaols of Paris, with a view of influencing the elections to a new Convention which met to proclaim the abolition of royalty. The retreat of the Prussian army, whose numbers had been reduced by disease till an advance on Paris became impossible, and a brilliant victory won by Dumouriez at Jemappes which laid the Netherlands at his feet, turned the panic of the French into a wild self-confidence. In November the Convention decreed that France offered the aid of her soldiers to all nations who would strive for freedom. "All Governments are our enemies," said its President; "all peoples our allies." In the teeth of treaties signed only two years before, and of the stipulation made by England when it pledged itself to neutrality, the French Government resolved to attack Holland, and ordered its generals to enforce by arms the opening of the Scheldt.

To do this was to force England into war. Public opinion was pressing harder day by day upon Pitt. The horror of the massacres of September, the hideous despotism of the Parisian mob, had done more to estrange England from the Revolution than all the eloquence of Burke. But even while withdrawing our Minister from Paris on the imprisonment of the King, Pitt clung stubbornly to the hope of peace. His hope was to bring the war to an end through English mediation, and to "leave France, which I believe is the best way, to arrange its own internal affairs as it can." No hour of Pitt's life is so great as the hour when he stood alone in England, and refused to bow to the growing cry of the nation for war. Even the news of the September massacres could only force from him a hope that France might abstain from any war of conquest, and escape from its social anarchy. In October the French agent in England reported that Pitt was about to recognize the Republic. At the opening of November he still pressed on Holland a steady neutrality. It was France, and not England, which at last wrenched from his grasp the peace to which he clung so desperately. The decree of the Convention and

the attack on the Dutch left him no choice but war, for it was impossible for England to endure a French fleet at Antwerp, or to desert allies like the United Provinces. But even in December the news of the approaching partition of Poland nerved him to a last struggle for peace; he offered to aid Austria in acquiring Bavaria if she would make terms with France, and pledged himself to France to abstain from war if that power would cease from violating the independence of her neighbor states. But across the Channel his moderation was only taken for fear, while in England the general mourning which followed on the news of the French King's execution showed the growing ardor for the contest. The rejection of his last offers indeed made a contest inevitable. Both sides ceased from diplomatic communications, and in February, 1793, France issued her Declaration of War.

Section IV.—The War with France, 1793—1815.*

From the moment when France declared war against England Pitt's power was at an end. His pride, his immovable firmness, and the general confidence of the nation still kept him at the head of affairs; but he could do little save drift along with the tide of popular feeling which he never fully understood. The very excellences of his character unfitted him for the conduct of a war. He was in fact a Peace Minister, forced into war by a panic and enthusiasm which he shared in a very small degree, and unaided by his father's gift of at once entering into the sympathies and passions around him, and of rousing passions and sympathies in return. Around him the country broke out in a fit of frenzy and alarm which rivalled the passion and panic over-sea. The confidence of France in its illusions as to opinion in England deluded for the moment even Englishmen themselves. The partisans of Republicanism were in reality but a few handfuls of men who

* *Authorities.*—To those mentioned before we may add Moore's "Life of Sheridan"; the Lives of Lord Castlereagh, Lord Eldon, and Lord Sidmouth; Romilly's Memoirs; Lord Cornwallis's Correspondence; Mr. Yonge's Life of Lord Liverpool; the Diaries and Correspondence of Lord Malmesbury, Lord Colchester, and Lord Auckland. For the general history of England at this time, see Alison's "History of Europe"; for its military history, Sir William Napier's "History of the Peninsular War."

played at gathering Conventions, and at calling themselves citizens and patriots, in childish imitation of what was going on across the Channel. But in the mass of Englishmen the dread of revolution passed for the hour into sheer panic. Even the bulk of the Whig party forsook Fox when he still proclaimed his faith in France and the Revolution. The "Old Whigs," as they called themselves, with the Duke of Portland, Earls Spencer and Fitzwilliam, and Mr. Windham at their head, followed Burke in giving their adhesion to the Government. Pitt, himself, though little touched by the political reaction around him, was shaken by the dream of social danger, and believed in the existence of "thousands of bandits," who were ready to rise against the throne, to plunder every landlord, and to sack London. "Paine is no fool," he said to his niece who quoted to him a passage from the "Rights of Man," in which that author had vindicated the principles of the Revolution; "he is perhaps right; but if I did what he wants, I should have thousands of bandits on my hands to-morrow, and London burnt." It was this sense of social danger which alone reconciled him to the war. Bitter as the need of the struggle which was forced upon England was to him, he accepted it with the less reluctance that war, as he trusted, would check the progress of "French principles" in England itself. The worst issue of this panic was the series of legislative measures in which it found expression. The Habeas Corpus Act was suspended, a bill against seditious assemblies restricted the liberty of public meeting, and a wider scope was given to the Statute of Treasons. Prosecution after prosecution was directed against the Press; the sermons of some dissenting ministers were indicted as seditious; and the conventions of sympathizers with France were roughly broken up. The worst excesses of the panic were witnessed in Scotland, where young Whigs, whose only offence was an advocacy of Parliamentary reform, were sentenced to transportation, and where a brutal judge openly expressed his regret that the practice of torture in seditious cases should have fallen into disuse. The panic indeed soon passed away for sheer want of material to feed on. In 1794 the leaders of the Corresponding Society, a body which professed sympathy with France, were brought to trial on a charge of high treason, but their acquittal proved that all active terror was over. Save for occasional riots, to which

the poor were goaded by sheer want of bread, no social disturbance troubled England through the twenty years of the war. But the blind reaction against all reform which had sprung from the panic lasted on when the panic was forgotten. For nearly a quarter of a century it was hard to get a hearing for any measure which threatened change to an existing institution, beneficial though the change might be. Even the philanthropic movement which so nobly characterized the time found itself checked and hampered by the dread of revolution.

At first indeed all seemed to go ill for France. She was girt in by a ring of enemies; the Empire, Austria, Prussia, Sardinia, Spain, and England were leagued in arms against her; and their efforts were seconded by civil war. The peasants of Poitou and Brittany rose in revolt against the government at Paris, while Marseilles and Lyons were driven into insurrection by the violent leaders who now seized on power in the capital. The French armies were driven back from the Netherlands when ten thousand English soldiers, under the Duke of York, joined the Austrians in Flanders in 1793. But the chance of crushing the Revolution was lost by the greed of the two German powers. Russia, as Pitt had foreseen, was now free to carry out her schemes in the East; and Austria and Prussia saw themselves forced, in the interest of a balance of power, to share in her annexations at the cost of Poland. But this new division of Poland would have become impossible had France been enabled by a restoration of its monarchy to take up again its natural position in Europe, and to accept the alliance which Pitt would in such a case have offered her. The policy of the German courts therefore was to prolong an anarchy which left them free for the moment to crush Poland; and the allied armies which might have marched upon Paris were purposely frittered away in sieges in the Netherlands and the Rhine. Such a policy gave France time to recover from the shock of her disasters. Whatever were the crimes and tyranny of her leaders, France felt in spite of them the value of the Revolution, and rallied enthusiastically to its support. The revolts of the West and South were crushed. The Spanish invaders were held at bay at the foot of the Pyrenees, and the Piedmontese were driven from Nice and Savoy. The great port of Toulon, which called for foreign aid against the government of Paris, and admitted an English garrison within

its walls, was driven to surrender by measures counselled by a young artillery officer from Corsica, Napoleon Bonaparte. At the opening of 1794 a victory at Fleurus which again made the French masters of the Netherlands showed that the tide had turned. France was united within by the cessation of the Terror and of the tyranny of the Jacobins, while on every border victory followed the gigantic efforts with which she met the coalition against her. Spain sued for peace; Prussia withdrew her armies from the Rhine; the Sardinians were driven back from the Maritime Alps; the Rhine provinces were wrested from the Austrians; and before the year ended Holland was lost. Pichegru crossed the Waal in mid-winter with an overwhelming force, and the wretched remnant of ten thousand men who had followed the Duke of York to the Netherlands, thinned by disease and by the hardships of retreat, re-embarked for England.

The victories of France broke up the confederacy which had threatened it with destruction. The Batavian republic which Pichegru had set up after his conquest of Holland was now an ally of France. Prussia bought peace by the cessation of her possessions west of the Rhine. Peace with Spain followed in the summer, while Sweden and the Protestant cantons of Switzerland recognized the Republic. In France itself discord came well-nigh to an end. The fresh severities against the ultra-republicans which followed on the establishment of a Directory indicated the moderate character of the new government, and Pitt seized on this change in the temper of the French government as giving an opening for peace. Pitt himself was sick of the strife. England had maintained indeed her naval supremacy. The triumphs of her seamen were in strange contrast with her weakness on land; and at the outset of the contest, in 1794, the French fleet was defeated off Brest by Lord Howe in a victory which bore the name of the day on which it was won, the First of June. Her colonial gains too had been considerable. Most of the West Indian islands which had been held by France, and the far more valuable settlements of the Dutch, the Cape of Good Hope, Ceylon, and the famous Spice Islands of the Malaccas and Java had been transferred to the British Crown. But Pitt was without means of efficiently carrying on the war. The army was small and without military experience, while its

leaders were utterly incapable. "We have no General," wrote Lord Grenville, "but some old woman in a red riband." Wretched too as had been the conduct of the war, its cost was already terrible. If England was without soldiers, she had wealth, and Pitt had been forced to turn her wealth into an engine of war. He became the paymaster of the coalition, and his subsidies kept the allied armies in the field. But the immense loans which these called for, and the quick growth of expenditure, undid all his financial reforms. Taxation, which had reached its lowest point under Pitt's peace administration, mounted to a height undreamt of before. The public debt rose by leaps and bounds. In three years nearly eighty millions had been added to it.

But though the ruin of his financial hopes, and his keen sense of the European dangers which the contest involved, made Pitt earnest to close the struggle with the Revolution, he stood almost alone in his longings for peace. The nation at large was still ardent for war, and its ardor was fired by Burke in his "Letters on a Regicide Peace," the last outcry of that fanaticism which had done so much to plunge the world in blood. Nor was France less ardent for war than England. At the moment when Pitt sought to open negotiations, her victories had roused hopes of wider conquests, and though General Moreau was foiled in a march on Vienna, the wonderful successes of Napoleon Bonaparte, who now took the command of the army of the Alps, laid Piedmont at her feet. Lombardy was soon in the hands of the French, the Duchies south of the Po pillaged, and the Pope driven to purchase an armistice. Fresh victories enabled Bonaparte to wring a peace from Austria in the treaty of Campo Formio, which not only gave France the Ionian Islands, a part of the old territory of Venice, as well as the Netherlands and the whole left bank of the Rhine, but united Lombardy with the Duchies south of the Po, and the Papal States as far as the Rubicon, into a "Cisalpine Republic," which was absolutely beneath her control. The withdrawal of Austria left France without an enemy on the Continent, and England without an ally. The stress of the war was pressing more heavily on her every day. The alarm of a French invasion of Ireland brought about a suspension of specie payments on the part of the Bank. A mutiny in the fleet was suppressed with difficulty.

It was in this darkest hour of the struggle that Burke passed away, protesting to the last against the peace which, in spite of his previous failure, Pitt tried in 1797 to negotiate at Lille. Peace seemed more needful to him than ever; for the naval supremacy of Britain was threatened by a coalition such as had all but crushed her in the American War. Again the Dutch and Spanish fleets were allied with the fleets of France, and if they gained command of the Channel, it would enable France to send overwhelming forces in aid of the rising which was planned in Ireland. But the danger had hardly threatened when it was dispelled by two great victories. When in 1797 the Spanish fleet put out to sea, it was attacked by Admiral Jervis off Cape St. Vincent and driven back to Cadiz with the loss of four of its finest vessels; while the Dutch fleet from the Texel, which was to protect a French force in its descent upon Ireland, was met by a far larger fleet under Admiral Duncan, and almost annihilated in a battle off Camperdown, after an obstinate struggle which showed the Hollanders still worthy of their old renown. The ruin of its hopes in the battle of Camperdown drove Ireland to a rising of despair; but the revolt was crushed by the defeat of the insurgents at Vinegar Hill in May, 1798, and the surrender of General Humbert, who landed in August with a French force. Of the threefold attack on which the Directory relied, two parts had now broken down. England still held the seas, and the insurrection in Ireland had failed. The next year saw the crowning victory of the Nile. The genius of Bonaparte had seized on the schemes for a rising in India, where Tippoo Sahib, the successor of Hyder Ali in Mysore, had vowed to drive the English from the South; and he laid before the Directory a plan for the conquest of Egypt as a preliminary to a campaign in Southern India. In 1798 he landed in Egypt; and its conquest was rapid and complete. But the thirteen men-of-war which had escorted his expedition were found by Admiral Nelson in Aboukir Bay, moored close to the coast in a line guarded at either end by gun-boats and batteries. Nelson resolved to thrust his own ships between the French and the shore; his flagship led the way; and after a terrible fight of twelve hours, nine of the French vessels were captured and destroyed, two were burnt, and five thousand French seamen were killed or made prisoners. All

communication between France and Bonaparte's army was cut off; and his hopes of making Egypt a starting-point for the conquest of India fell at a blow.

Freed from the dangers that threatened her rule in Ireland and in India, and mistress of the seas, England was free to attack France; and in such an attack she was aided at this moment by the temper of the European powers, and the ceaseless aggressions of France. Russia formed a close alliance with Austria; and it was with renewed hope that Pitt lavished subsidies on the two allies. A union of the Russian and Austrian armies drove the French back again across the Alps and the Rhine; but the stubborn energy of General Massena enabled his soldiers to hold their ground in Switzerland; and the attempt of a united force of Russians and English to wrest Holland from its French masters was successfully repulsed. In the East, however, England was more successful. Foiled in his dreams of Indian conquests, Bonaparte conceived the design of the conquest of Syria, and of the creation of an army among its warlike mountaineers, with which he might march upon Constantinople or India at his will. But Acre, the key of Syria, was stubbornly held by the Turks, the French battering train was captured at sea by an English captain, Sir Sidney Smith, whose seamen aided in the defence of the place, and the besiegers were forced to fall back upon Egypt. The French general despairing of success left his army and returned to France. His arrival in Paris was soon followed by the overthrow of the Directors. Three consuls took their place; but under the name of First Consul Bonaparte became in effect sole ruler of the country. His energy at once changed the whole face of European affairs. The offers of peace which he made to England and Austria were intended to do little more than to shake the coalition, and gain breathing time for the organization of a new force which was gathering in secrecy at Dijon, while Moreau with the army of the Rhine pushed again along the Danube. The First Consul crossed the St. Bernard in 1800, and a victory at Marengo forced the Austrians to surrender Lombardy; while a truce arrested the march of Moreau, who had captured Munich and was pushing on to Vienna. On the resumption of the war in the autumn the Austrians were driven back on Vienna; and Moreau crushed their army on

the Iser in the victory of Hohenlinden. In February, 1801, the Continental War was brought suddenly to an end by the Peace of Luneville.

It was but a few months before the close of the war that Pitt brought about the Union of Ireland with England. The history of Ireland, during the fifty years that followed its conquest by William the Third, is one which no Englishman can recall without shame. After the surrender of Limerick every Catholic Irishman, and there were five Irish Catholics to every Irish Protestant, was treated as a stranger and a foreigner in his own country. The House of Lords, the House of Commons, the magistracy, all corporate offices in towns, all ranks in the army, the bench, the bar, the whole administration of government or justice, were closed against Catholics. The very right of voting for their representatives in Parliament was denied them. Few Catholic landowners had been left by the sweeping confiscations which had followed the successive revolts of the island, and oppressive laws forced even these few with scant exceptions to profess Protestantism. Necessity, indeed, had brought about a practical toleration of their religion and their worship; but in all social and political matters the native Catholics, in other words the immense majority of the people of Ireland, were simply hewers of wood and drawers of water to their Protestant masters, who looked on themselves as mere settlers, who boasted of their Scotch or English extraction, and who regarded the name of "Irishman" as an insult. But small as was this Protestant body, one-half of it fared little better, as far as power was concerned, than the Catholics; for the Presbyterians, who formed the bulk of the Ulster settlers, were shut out by law from all civil, military, and municipal offices. The administration and justice of the country were thus kept rigidly in the hands of members of the Established Church, a body which comprised about a twelfth of the population of the island; while its government was practically monopolized by a few great Protestant landowners. The rotten boroughs, which had originally been created to make the Irish Parliament dependent on the Crown, had fallen under the influence of the adjacent landlords, who were thus masters of the House of Commons, while they formed in person the House of Peers. During the first half of the eighteenth century two-thirds of

the House of Commons, in fact, was returned by a small group of nobles, who were recognized as "parliamentary undertakers," and who undertook to "manage" Parliament on their own terms. Irish politics were for these men a means of public plunder; they were glutted with pensions, preferments, and bribes in hard cash in return for their services; they were the advisers of every Lord-Lieutenant, and the practical governors of the country. The only check to the tyranny of this narrow and corrupt oligarchy was in the connection of Ireland with England and the subordination of its Parliament to the English Privy Council. The Irish Parliament had no power of originating legislative or financial measures, and could only say "yes" or "no" to Acts submitted to it by the Privy Council in England. The English Parliament too claimed the right of binding Ireland as well as England by its enactments, and one of its statutes transferred the appellate jurisdiction of the Irish Peerage to the English House of Lords. But as if to compensate for the benefits of its protection, England did her best to annihilate Irish commerce and to ruin Irish agriculture. Statutes passed by the jealousy of English landowners forbade the export of Irish cattle or sheep to English ports. The export of wool was forbidden, lest it might interfere with the profits of English wool-growers. Poverty was thus added to the curse of misgovernment; and poverty deepened with the rapid growth of the native population, till famine turned the country into a hell.

The bitter lesson of the last conquest, however, long sufficed to check all dreams of revolt among the natives, and the outbreaks which sprang from time to time out of the general misery and discontent were purely social in their character, and were roughly repressed by the ruling class. When political revolt threatened at last, the threat came from the ruling class itself. At the very outset of the reign of George the Third, the Irish Parliament insisted on its claim to the exclusive control of money bills, and a cry was raised for the removal of the checks imposed on its independence. But it was not till the American war that this cry became a political danger, a danger so real that England was forced to give way. From the close of the war, when the Irish Volunteers wrung legislative independence from the Rockingham Min-

istry, England and Ireland were simply held together by the fact that the sovereign of the one island was also the sovereign of the other. During the next eighteen years Ireland was "independent;" but its independence was a mere name for the uncontrolled rule of a few noble families and of the Irish Executive backed by the support of the English Government. To such a length had the whole system of monopoly and patronage been carried, that at the time of the Union more than sixty seats were in the hands of three families alone, those of the Hills, the Ponsonbys, and the Beresfords; while the dominant influence in the Parliament now lay with the Treasury boroughs at the disposal of the Government. The victory of the volunteers immediately produced measures in favor of the Catholics and Presbyterians. The Volunteers had already in 1780 won for the Presbyterians, who formed a good half of their force, full political liberty by the abolition of the Sacramental Test; and the Irish Parliament of 1782 removed at once the last grievances of the Protestant Dissenters. The Catholics were rewarded for their aid by the repeal of the more grossly oppressive enactments of the penal laws. But when Grattan, supported by the bulk of the Irish party, pleaded for Parliamentary reform, and for the grant of equal rights to the Catholics, he was utterly foiled by the small group of borough owners, who chiefly controlled the Government and the Parliament. The ruling class found government too profitable to share it with other possessors. It was only by hard bribery that the English Viceroys could secure their co-operation in the simplest measures of administration. "If ever there was a country unfit to govern itself," said Lord Hutchinson, "it is Ireland. A corrupt aristocracy, a ferocious commonalty, a distracted Government, a divided people!" In Pitt's eyes the danger of Ireland lay above all in the misery of its people. Altogether the Irish Catholics were held down by the brute force of their Protestant rulers, he saw that their discontent was growing fast into rebellion, and that one secret of their discontent at any rate lay in Irish poverty, a poverty increased if not originally brought about by the jealous exclusion of Irish products from their natural markets in England itself. In 1779 Ireland had won from Lord North large measures of free trade abroad; but the heavy duties laid by the English Parliament on all Irish

manufactures save linen and woollen yarn still shut them out of England. One of Pitt's first commercial measures aimed at putting an end to this exclusion by a bill which established freedom of trade between the two islands. His first proposals were accepted in the Irish Parliament; but the fears and jealousies of the English farmers and manufacturers forced into the Bill amendments which gave to the British Parliament powers over Irish navigation and commerce, thus overriding their newly-won independence, and the measure in its new form was rejected in Ireland. The outbreak of the revolutionary struggle, and the efforts which the French revolutionists at once made to excite rebellion amongst the Irish, roused Pitt to fresh measures of conciliation and good government. In 1793 he forced the Irish Administration to abandon a resistance which had wrecked his projects the previous year; and the Irish Parliament passed without opposition measures for the admission of Catholics to the electoral franchise, and to civil and military office within the island, which promised to open a new era of religious liberty. But the promise came too late. The hope of conciliation was lost in the fast rising tide of religious and social passion. The Society of "United Irishmen," which was founded in 1791 at Belfast by Wolfe Tone with a view of forming a union between Protestants and Catholics to win Parliamentary reform, drifted into a correspondence with France and projects of insurrection. The peasantry, brooding over their misery and their wrongs, were equally stirred by the news from France; and their discontent broke out in outrages of secret societies which spread panic among the ruling classes. The misery was increased by faction fights between the Protestants and Catholics, which had already broken out before the French Revolution. The Catholics banded themselves together as "Defenders" against the outrages of the "Peep-o'-day Boys," who were mainly drawn from the more violent Presbyterians; and these factions became later merged in the larger associations of the "United Irishmen" and the "Orangemen."

At last the smoldering discontent and disaffection burst into flame. The panic roused in 1796 by an attempted French invasion under Hoche woke passions of cruelty and tyranny which turned Ireland into a hell. Soldiers and yeomanry

marched over the country torturing and scourging the "croppies," as the Irish peasantry were called in derision from their short-cut hair, robbing, ravishing, and murdering. Their outrages were sanctioned by the landowners who formed the Irish Parliament in a Bill of Indemnity, and protected for the future by an Insurrection Act. Meanwhile the United Irishmen prepared for an insurrection, which was delayed by the failure of the French expeditions, on which they counted for support, and above all by the victory of Camperdown. Atrocities were answered by atrocities when the revolt at last broke out in 1798. Loyalists were lashed and tortured in their turn, and every soldier taken was butchered without mercy. The rebels however no sooner mustered fourteen thousand men strong in a camp on Vinegar Hill, near Ennis-corthy, than the camp was stormed by the English troops, and the revolt utterly suppressed. The suppression came only just in time to prevent greater disasters. A few weeks after the close of the rebellion nine hundred French soldiers under General Humbert landed in Mayo, broke a force of thrice their number in a battle at Castlebar, and only surrendered when the Lord-Lieutenant, Lord Cornwallis, faced them with thirty thousand men. Pitt's disgust at "the bigoted fury of Irish Protestants" backed Lord Cornwallis in checking the reprisals of his troops and of the Orangemen; but the hideous cruelty which he was forced to witness brought about a firm resolve to put an end to the farce of "Independence," which left Ireland helpless in such hands. The political necessity for a union of the two islands had been brought home to every English statesman by the course of the Irish Parliament during the disputes over the Regency; for while England repelled the claims of the Prince of Wales to the Regency as of right, the legislature of Ireland admitted them. As the only union left between the two peoples was their obedience to a common ruler, such an act might conceivably have ended in their entire severance; and the sense of this danger secured a welcome in England for Pitt's proposal to unite the two Parliaments. The opposition of the Irish boroughmongers was naturally stubborn and determined. But with them it was a sheer question of gold; and their assent was bought with a million in money, and with a liberal distribution of pensions and peerages. Base and

shameless as were such means, Pitt may fairly plead that they were the only means by which the bill for the Union could have been passed. As the matter was finally arranged in June, 1800, one hundred Irish members became part of the House of Commons at Westminster, and twenty-eight temporal with four spiritual peers, chosen for each Parliament by their fellows, took their seats in the House of Lords. Commerce between the two countries was freed from all restrictions, and every trading privilege of the one thrown open to the other; while taxation was proportionately distributed between the two peoples.

The lavish creation of peers which formed a part of the price paid for the Union of Ireland brought about a practical change in our constitution. Few bodies have varied more in the number of their members than the House of Lords. At the close of the Wars of the Roses the lay lords who remained numbered fifty-two; in Elizabeth's reign they numbered only sixty; the prodigal creations of the Stuarts raised them to one hundred and seventy-six. At this point, however, they practically remained stationary during the reigns of the first two Georges; and, as we have seen, only the dogged opposition of Walpole prevented Lord Stanhope from limiting the peerage to the number it had at that time reached. Mischievous as such a measure would have been, it would at any rate have prevented the lavish creation of peerages on which George the Third relied in the early days of his reign as one of his means of breaking up the party government which restrained him. But what was with the King a mere means of corruption became with Pitt a settled purpose of bringing the peerage into closer relations with the landowning and opulent classes, and rendering the Crown independent of factious combinations among the existing peers. While himself disdainful of hereditary honors, he lavished them as no Minister had lavished them before. In his first five years of rule he created forty-eight new peers. In two later years alone, 1796-97, he created thirty-five. By 1801 the peerages which were the price of the Union with Ireland had helped to raise his creations to upwards of one hundred and forty. So busily was his example followed by his successors that at the end of George the Third's reign the number of hereditary peers had become double what it was at his accession. The

whole character of the House of Lords was changed. Up to this time it had been a small assembly of great nobles, bound together by family or party ties into a distinct power in the State. From this time it became the stronghold of property, the representative of the great estates and great fortunes which the vast increase of English wealth was building up. For the first time, too, in our history, it became the distinctly conservative element in our constitution. The full import of Pitt's changes has still to be revealed, but in some ways their results have been clearly marked. The larger number of the peerage, though due to the will of the Crown, has practically freed the House from any influence which the Crown can exert by the distribution of honors. This change, since the power of the Crown has been practically wielded by the House of Commons, has rendered it far harder to reconcile the free action of the Lords with the regular working of constitutional government. On the other hand, the increased number of its members has rendered the House more responsible to public opinion, when public opinion is strongly pronounced; and the political tact which is inherent in great aristocratic assemblies has hitherto prevented any collision with the Lower House from being pushed to an irreconcilable quarrel.

But the legislative union of the two countries was only part of the plan which Pitt had conceived for the conciliation of Ireland. With the conclusion of the Union his projects of free trade between the countries, which had been defeated a few years back, came into play; and in spite of insufficient capital and social disturbance the growth of the trade, shipping, and manufactures of Ireland has gone steadily on from that time to this. The change which brought Ireland directly under the common Parliament was followed too by a gradual revision of its oppressive laws, and an amendment in their administration; taxation was lightened, and a faint beginning made of public instruction. But in Pitt's mind the great means of conciliation was the concession of religious equality. In proposing to the English Parliament the union of the two countries he pointed out that when thus joined to a Protestant country like England all danger of a Catholic supremacy in Ireland, should Catholic disabilities be removed, would be practically at an end; and had suggested that in such a case

“an effectual and adequate provision for the Catholic clergy” would be a security for their loyalty. His words gave strength to the hopes of “Catholic Emancipation,” or the removal of what remained of the civil disabilities of Catholics, which were held out by the viceroy, Lord Castlereagh, in Ireland itself, as a means of hindering any opposition to the project of Union on the part of the Catholics. It was agreed on all sides that their opposition would have secured its defeat; but no Catholic opposition showed itself. After the passing of the bill, Pitt prepared to lay before the Cabinet a measure which would have raised the Irish Catholic to perfect equality of civil rights. He proposed to remove all religious tests which limited the exercise of the franchise, or were required for admission to Parliament, the magistracy, the bar, municipal offices, or posts in the army, or the service of the State. An oath of allegiance and of fidelity to the Constitution was substituted for the Sacramental test; while the loyalty of the Catholic and Dissenting clergy was secured by a grant of some provision to both by the State. To win over the Episcopal Church, measures were added for strengthening its means of discipline, and for increasing the stipends of its poorer ministers. A commutation of tithes was to remove a constant source of quarrel in Ireland between the Protestant clergy and the Irish people. The scheme was too large and statesmanlike to secure the immediate assent of the Cabinet; and before that assent could be won the plan was communicated through the treachery of the Chancellor, Lord Loughborough, to George the Third. “I count any man my personal enemy,” the King broke out angrily to Dundas, “who proposes any such measure.” Pitt answered this outburst by submitting his whole plan to the King. “The political circumstances under which the exclusive laws originated,” he wrote, “arising either from the conflicting powers of hostile and nearly balanced sects, from the apprehension of a Popish Queen as successor, a disputed succession and a foreign pretender, a division in Europe between Catholic and Protestant Powers, are no longer applicable to the present state of things.” But argument was wasted upon George the Third. In spite of the decision of the lawyers whom he consulted, the King held himself bound by his Coronation Oath to maintain the tests. On this point his bigotry was at one

with the bigotry of the bulk of his subjects, as well as with their political distrust of Catholics and Irishmen; and his obstinacy was strengthened by a knowledge that his refusal must drive Pitt from office. In February, 1801, the month of the Peace of Luneville, Pitt resigned, and was succeeded by the Speaker of the House of Commons, Mr. Addington, a weak and narrow-minded man, and as bigoted as the King himself. Of Lord Hawkesbury, who succeeded Lord Grenville in the conduct of foreign affairs, nothing was known outside the House of Commons.

It was with anxiety that England found itself guided by men like these at a time when every hour brought darker news. The scarcity of bread was mounting to a famine. Taxes were raised anew, and yet the loan for the year amounted to five and twenty millions. The country stood utterly alone; while the Peace of Luneville secured France from all hostility on the Continent. And it was soon plain that this peace was only the first step in a new policy on the part of the First Consul. What he had done was to free his hands for a decisive conflict with Britain itself, both as a world-power and as a centre of wealth. England was at once the carrier of European commerce, and the workshop of European manufactures. While her mines, her looms, her steam-engines, were giving her almost a monopoly of industrial production, the carrying trade of France and Holland alike had been transferred to the British flag, and the conquest during the war of their richer settlements had thrown into British hands the whole colonial trade of the world. In his gigantic project of a "Continental System" the aim of Bonaparte was to strike at the trade of England by closing the ports of Europe against her ships. By a league of the Northern powers he sought to wrest from her the command of the seas. Denmark and Sweden, who resented the severity with which Britain enforced that right of search which had brought about their armed neutrality at the close of the American war, were enlisted in a league of neutrals which was in effect a declaration of war against England, and which Prussia was prepared to join. The Czar Paul of Russia on his side saw in the power of Britain the chief obstacle to his designs upon Turkey. A squabble over Malta, which had been taken from the Knights of St. John by Bonaparte on his way to Egypt,

and had ever since been blockaded by English ships, but whose possession the Czar claimed as his own on the ground of an alleged election as Grand Master of the Order, served him as a pretext for a quarrel with England, and Paul openly prepared for hostilities. It was plain that as soon as spring opened the Baltic, the fleets of Russia, Sweden, and Denmark would act in practical union with those of France and Spain. But dexterous as the combination was it was shattered at a blow. In April a British fleet appeared before Copenhagen, and after a desperate struggle silenced the Danish batteries, captured six Danish ships, and forced Denmark to conclude an armistice which enabled English ships to enter the Baltic. The Northern Coalition too was broken up by the death of the Czar. In June a Convention between England and Russia settled the vexed questions of the right of search and contraband of war, and this Convention was accepted by Sweden and Denmark. Meanwhile, at the very moment of the attack on Copenhagen, a stroke as effective had wrecked the projects of Bonaparte in the East. The surrender of Malta to the English fleet left England the mistress of the Mediterranean; and from Malta she now turned to Egypt itself. A force of 15,000 men under General Abercromby anchored in Aboukir Bay. The French troops that Bonaparte had left in Egypt rapidly concentrated, and on the 21st of March their general attacked the English army. After a stubborn battle, in which Abercromby fell mortally wounded, the French drew off with heavy loss; and at the close of June the capitulation of the 13,000 soldiers who remained closed the French rule over Egypt.

Both parties in this gigantic struggle, however, were at last anxious to suspend the war. It was to give time for such an organization of France and its resources as might enable him to reopen the struggle with other chances of success that Bonaparte opened negotiations for peace at the close of 1801. His offers were at once met by the English Government. The terms of the Peace of Amiens which was concluded in March, 1802, were necessarily simple, for England had no claim to interfere with the settlement of the Continent. France promised to retire from Southern Italy, and to leave to themselves the republics it had set up along its border in Holland, Switzerland, and Piedmont. England

recognized the French Government, gave up her newly conquered colonies save Ceylon and Trinidad, acknowledged the Ionian Islands as a free Republic, and engaged to replace the Knights of St. John in the Isle of Malta. There was a general sense of relief at the close of the long struggle; and the new French ambassador was drawn in triumph on his arrival through the streets of London. But shrewd observers saw the dangers that lay in the temper of the First Consul. Whatever had been the errors of the French revolutionists, even their worst attacks on the independence of the nations around them had been veiled by a vague notion of freeing the peoples whom they invaded from the yoke of their rulers. But the aim of Bonaparte was simply that of a vulgar conqueror. He was resolute to be master of the Western world, and no notions of popular freedom or sense of national right interfered with his resolve. The means at his command were immense. The political life of the Revolution had been cut short by his military despotism, but the new social vigor which it had given to France through the abolition of privileges and the creation of a new middle class on the ruins of the clergy and the nobles still lived on. While the dissensions which tore France asunder were hushed by the policy of the First Consul, by his restoration of the Church as a religious power, his recall of the exiles, and the economy and wise administration which distinguished his rule, the centralized system of government bequeathed by the Monarchy to the Revolution, and by the Revolution to Bonaparte, enabled him easily to seize this national vigor for the profit of his own despotism. The exhaustion of the brilliant hopes raised by the Revolution, the craving for public order, the military enthusiasm and the impulse of a new glory given by the wonderful victories France had won, made a Tyranny possible; and in the hands of Bonaparte this tyranny was supported by a secret police, by the suppression of the press and of all freedom of opinion, and above all by the iron will and immense ability of the First Consul himself. Once chosen Consul for life, he felt himself secure at home, and turned restlessly to the work of outer aggression. The pledges given at Amiens were set aside. The republics established on the borders of France were brought into mere dependence on his will. Piedmont and Parma were annexed

to France; and a French army occupied Switzerland. The temperate protests of the English Government were answered by demands for the expulsion of the French exiles who had been living in England ever since the Revolution, and for its surrender of Malta, which was retained till some security could be devised against a fresh seizure of the island by the French fleet. It was plain that a struggle was inevitable; hugh armaments were preparing in the French ports, and a new activity was seen in those of Spain. In May, 1803, the British Government anticipated Bonaparte's attack by a declaration of war.

The breach only quickened Bonaparte's resolve to attack the enemy at home. The difficulties in his way he set contemptuously aside. "Fifteen millions of people," he said, in allusion to the disproportion between the population of England and France, "must give way to forty millions;" and an invasion of England itself was planned on a gigantic scale. A camp of one hundred thousand men was formed at Boulogne, and a host of flat-bottomed boats gathered for their conveyance across the Channel. The peril of the nation forced Addington from office and recalled Pitt to power. His health was broken, and as the days went by his appearance became so haggard and depressed that it was plain death was drawing near. But dying as he really was, the nation clung to him with all its old faith. He was still the representative of national union; and he proposed to include Fox and the leading Whigs in his new ministry, but he was foiled by the bigotry of the King; and the refusal of Lord Grenville and of Windham to take office without Fox, as well as the loss of his post at a later time by his ablest supporter, Dundas, left him almost alone. But lonely as he was, he faced difficulty and danger with the same courage as of old. The invasion seemed imminent when Bonaparte, who now assumed the title of the Emperor Napoleon, appeared in the camp at Boulogne. "Let us be masters of the Channel for six hours," he is reported to have said, "and we are masters of the world." A skilfully combined plan by which the British fleet would have been divided, while the whole French navy was concentrated in the Channel, was delayed by the death of the admiral destined to execute it. But the alliance with Spain placed the Spanish fleet at Napoleon's disposal, and

in 1805 he planned its union with that of France, the crushing of the squadron which blocked the ports of the Channel before the English ships which were watching the Spanish armament could come to its support, and a crossing of the vast armament thus protected to the English shore. The three hundred thousand volunteers mustered in England to meet the coming attack would have offered small hindrance to the veterans of the Grand Army, had they once crossed the Channel. But Pitt had already found work for France elsewhere. The alarm of the Continental Powers had been brought to a head by Napoleon's annexation of Genoa; Pitt's subsidies had removed the last obstacle in the way of a league; and Russia, Austria, and Sweden joined in an alliance to wrest Italy and the Low Countries from the grasp of the French Emperor. Napoleon meanwhile swept the sea in vain for a glimpse of the great armament whose assembly in the Channel he had so skilfully planned. Admiral Villeneuve, uniting the Spanish ships with his own squadron from Toulon, drew Nelson in pursuit to the West Indies, and then, suddenly returning to Cadiz, hastened to form a junction with the French squadron at Brest and crush the English fleet in the Channel. But a headlong pursuit brought Nelson up with him ere the manœuvre was complete, and the two fleets met on the 21st of October, 1805, off Cape Trafalgar. "England," ran Nelson's famous signal, "expects every man to do his duty;" and though he fell himself in the hour of victory, twenty French sail had struck their flag ere the day was done. "England has saved herself by her courage," Pitt said in what were destined to be his last public words: "she will save Europe by her example!" But even before the victory of Trafalgar Napoleon had abandoned the dream of invading England to meet the coalition in his rear; and swinging round his forces on the Danube he forced an Austrian army to capitulation in Ulm three days before his naval defeat. From Ulm he marched on Vienna, and crushed the combined armies of Austria and Russia in the battle of Austerlitz. "Austerlitz," Wilberforce wrote in his diary, "killed Pitt." Though he was still but forty-seven, the hollow voice and wasted frame of the great Minister had long told that death was near; and the blow to his hopes proved fatal. "Roll up that map," he said, pointing to a

map of Europe which hung upon the wall: "it will not be wanted these ten years!" Once only he rallied from stupor; and those who bent over him caught a faint murmur of "My country! How I leave my country!" On the 23d of January, 1806, he breathed his last; and he was laid in Westminster Abbey in the grave of Chatham. "What grave," exclaimed Lord Wellesley, "contains such a father and such a son! What sepulchre embosoms the remains of so much human excellence and glory!"

So great was felt to be the loss that nothing but the union of parties, which Pitt had in vain desired during his lifetime, could fill up the gap left by his death. In the new Ministry Fox, with the small body of popular Whigs who were bent on peace and internal reform, united with the aristocratic Whigs under Lord Grenville and with the Tories under Lord Sidmouth. All home questions in fact were subordinated to the need of saving Europe from the ambition of France, and in the resolve to save Europe, Fox was as resolute as Pitt himself. His hopes of peace, indeed, were stronger; but they were foiled by the evasive answer which Napoleon gave to his overtures, and by a new war which he undertook against Prussia, the one power which seemed able to resist his arms. On the 14th of October, 1806, a decisive victory at Jena laid North Germany at Napoleon's feet. Death only a month before saved Fox from witnessing the overthrow of his hopes; and his loss weakened the Grenville Cabinet at the opening of a new and more desperate struggle with France. Napoleon's earlier attempt at the enforcement of a Continental System had broken down with the failure of the Northern League; but in his mastery of Europe he now saw a more effective means of realizing his dream; and he was able to find a pretext for his new attack in England's own action. By a violent stretch of her rights as a combatant she had declared the whole coast occupied by France and its allies, from Dantzic to Trieste, to be in a state of blockade. It was impossible to enforce such a "paper blockade," even with the immense force at her disposal; and Napoleon seized on the opportunity to retaliate by the entire exclusion of British commerce from the Continent, an exclusion which he trusted would end the war by the ruin it would bring on the English manufacturers. A decree was issued from Berlin which—

without a single ship to carry it out—placed the British Islands in a state of blockade. All commerce or communication with them was prohibited; all English goods or manufactures found in the territory of France or its allies were declared liable to confiscation; and their harbors were closed, not only against vessels coming from Britain, but against all who had touched at her ports. The attempt to enforce such a system was foiled indeed by the rise of a widespread contraband trade, by the reluctance of Holland to aid in its own ruin, by the connivance of officials along the Prussian and Russian shores, and by the pressure of facts. It was impossible even for Napoleon himself to do without the goods he pretended to exclude; an immense system of licenses soon neutralized his decree; and the French army which marched to Eylau was clad in great-coats made at Leeds, and shod with shoes made at Northampton. But if it failed to destroy British industry, it told far more fatally on British commerce. Trade began to move from English vessels, which were subject to instant confiscation, and to pass into the hands of neutrals, and especially of the Americans. The merchant class called on the Government to protect it, and it was to this appeal that the Grenville Ministry replied in January, 1807, by an Order in Council which declared all the ports of the coast of France and her allies under blockade, and any neutral vessels trading between them to be good prize. Such a step was far from satisfying the British merchants. But their appeal was no longer to Lord Grenville. The forces of ignorance and bigotry which had been too strong for Pitt were too strong for the Grenville Ministry. Its greatest work, the abolition of the slave trade, in February, was done in the teeth of a vigorous opposition from the Tories and the merchants of Liverpool; and in March the first indication of its desire to open the question of religious equality by allowing Catholic officers to serve in the army was met on the part of the King by the demand of a pledge not to meddle with the question. On the refusal of this pledge the Ministry was dismissed.

Its fall was the final close of the union of parties brought about by the peril of French invasion; and from this time to the end of the war England was wholly governed by the Tories. The nominal head of the Ministry which succeeded

that of Lord Grenville was the Duke of Portland; its guiding spirit was the Foreign Secretary, George Canning, a young and devoted adherent of Pitt, whose brilliant rhetoric gave him power over the House of Commons, while the vigor and breadth of his mind gave a new energy and color to the war. At no time had opposition to Napoleon seemed so hopeless. From Berlin the Emperor marched into the heart of Poland, and though checked in the winter by the Russian forces in the hard-fought battle of Eylau, his victory of Friedland brought the Czar Alexander in the summer of 1807 to consent to the Peace of Tilsit. From foes the two Emperors of Western and Eastern Europe became friends, and the hope of French aid in the conquest of Turkey drew Alexander to a close alliance with Napoleon. Russia not only enforced the Berlin decrees against British commerce, but forced Sweden, the one ally that England still retained on the Continent, to renounce her alliance. The Russian and Swedish fleets were thus placed at the service of France; and the two Emperors counted on securing the fleet of Denmark, and again threatening by this union the maritime supremacy which formed England's real defence. The hope was foiled by the appearance off Elsinore in July, 1807, of an expedition, promptly and secretly equipped by Canning, with a demand for the surrender of the Danish fleet into the hands of England, on pledge of its return at the close of the war. On the refusal of the Danes the demand was enforced by a bombardment of Copenhagen; and the whole Danish fleet, with a vast mass of naval stores, was carried into British ports. It was in the same spirit of almost reckless decision that Canning turned to meet Napoleon's Continental System. In November he issued fresh Orders in Council. By these France, and every Continental state from which the British flag was excluded, was put in a state of blockade, and all vessels bound for their harbors were held subject to seizure unless they had touched at a British port. The orders were at once met by another decree of Napoleon issued at Milan in December, which declared every vessel, of whatever nation, coming from or bound to Britain or any British colony, to have forfeited its character as a neutral, and to be liable to seizure.

Meanwhile the effect of the Continental System upon Napoleon was to drive him to aggression after aggression in order

to maintain the material union of Europe against Britain. He was absolutely master of Western Europe, and its whole face changed as at an enchanter's touch. Prussia was occupied by French troops. Holland was changed into a monarchy by a simple decree of the French Emperor, and its crown bestowed on his brother Louis. Another brother, Jerome, became King of Westphalia, a new realm built up out of the Electorates of Hesse Cassel and Hanover. A third brother, Joseph, was made King of Naples; while the rest of Italy, and even Rome itself, was annexed to the French Empire. It was the hope of effectually crushing the world power of Britain which drove him to his worst aggression, the aggression upon Spain. He acted with his usual subtlety. In October, 1807, France and Spain agreed to divide Portugal between them; and on the advance of their forces the reigning House of Braganza fled helplessly from Lisbon to a refuge in Brazil. But the seizure of Portugal was only a prelude to the seizure of Spain. Charles the Fourth, whom a riot in his capital drove at this moment to abdication, and his son, Ferdinand the Seventh, were drawn to Bayonne in May, 1808, and forced to resign their claims to the Spanish crown; while a French army entered Madrid and proclaimed Joseph Bonaparte King of Spain. But this high-handed act of aggression was hardly completed when Spain rose as one man against the stranger; and desperate as the effort of its people seemed, the news of the rising was welcomed throughout England with a burst of enthusiastic joy. "Hitherto," cried Sheridan, a leader of the Whig opposition, "Bonaparte has contended with princes without dignity, numbers without ardor, or peoples without patriotism. He has yet to learn what it is to combat a people who are animated by one spirit against him." Tory and Whig alike held that "never had so happy an opportunity existed in Britain to strike a bold stroke for the rescue of the world;" and Canning at once resolved to change the system of desultory descents on colonies and sugar islands for a vigorous warfare in the Peninsula. Supplies were sent to the Spanish insurgents with reckless profusion, and two small armies placed under the command of Sir John Moore and Sir Arthur Wellesley for service in the Peninsula. In July, 1808, the surrender at Baylen of a French force which had invaded Andalusia gave the first shock to the power of Napoleon, and the blow was followed by one almost as severe. Landing at the

Mondego with fifteen thousand men, Sir Arthur Wellesley drove the French army of Portugal from the field of Vimiera, and forced it to surrender in the Convention of Cintra on the 30th of August. But the tide of success was soon roughly turned. Napoleon appeared in Spain with an army of two hundred thousand men; and Moore, who had advanced from Lisbon to Salamanca to support the Spanish armies, found them crushed on the Ebro, and was driven to fall hastily back on the coast. His force saved its honor in a battle before Corunna, which enabled it to embark in safety; but elsewhere all seemed lost. The whole of northern and central Spain was held by the French armies; and even Zaragoza, which had once heroically repulsed them, submitted after a second equally desperate resistance.

The landing of the wreck of Moore's army and the news of the Spanish defeats turned the temper of England from the wildest hope to the deepest despair; but Canning remained unmoved. On the day of the evacuation of Corunna he signed a treaty of alliance with the Spanish Junta at Cadiz; and the English force at Lisbon, which had already prepared to leave Portugal, was reinforced with thirteen thousand fresh troops and placed under the command of Sir Arthur Wellesley. "Portugal," Wellesley wrote coolly, "may be defended against any force which the French can bring against it." At this critical moment the best of the French troops with the Emperor himself were drawn from the Peninsula to the Danube; for the Spanish rising had roused Austria as well as England to a renewal of the struggle. When Marshal Soult therefore threatened Lisbon from the north, Wellesley marched boldly against him, drove him from Oporto in a disastrous retreat, and suddenly changing his line of operations, pushed with twenty thousand men by Abrantes on Madrid. He was joined on the march by a Spanish force of thirty thousand men; and a bloody action with a French army of equal force at Talavera in July, 1809, restored the renown of English arms. The losses on both sides were enormous, and the French fell back at the close of the struggle; but the fruits of the victory were lost by a sudden appearance of Soult on the English line of advance, and Wellesley was forced to retreat hastily on Badajoz. His failure was embittered by heavier disasters elsewhere. Austria was driven to sue for peace by Napoleon's victory at

Wagram; and a force of forty thousand English soldiers which had been despatched against Antwerp returned home baffled after losing half its numbers in the marshes of Walcheren.

The failure at Walcheren brought about the fall of the Portland Ministry. Canning attributed the disaster to the incompetence of Lord Castlereagh, an Irish peer who after taking the chief part in bringing about the union between England and Ireland had been raised by the Duke of Portland to the post of Secretary at War; and the quarrel between the two Ministers ended in a duel, and in their resignation of their offices. The Duke of Portland retired with Canning; and a new ministry was formed out of the more Tory members of the late administration under the guidance of Spencer Perceval, an industrious mediocrity of the narrowest type; the Marquis of Wellesley, a brother of the English general in Spain, becoming Foreign Secretary. But if Perceval and his colleagues possessed few of the higher qualities of statesmanship, they had one characteristic which in the actual position of English affairs was beyond all price. They were resolute to continue the war. In the nation at large the fit of enthusiasm had been followed by a fit of despair; and the City of London even petitioned for a withdrawal of the English forces from the Peninsula. Napoleon seemed irresistible, and now that Austria was crushed and England stood alone in opposition to him, the Emperor resolved to put an end to the strife by a vigorous prosecution of the war in Spain. Andalusia, the one province which remained independent, was invaded in the opening of 1810, and with the exception of Cadiz reduced to submission; while Marshal Massena with a fine army of eighty thousand men marched upon Lisbon. Even Perceval abandoned all hope of preserving a hold on the Peninsula in face of these new efforts, and threw on Wellesley, who had been raised to the peerage as Lord Wellington after Talavera, the responsibility of resolving to remain there. But the cool judgment and firm temper which distinguished Wellington enabled him to face a responsibility from which weaker men would have shrunk. "I conceive," he answered, "that the honor and interest of our country require that we should hold our ground here as long as possible; and, please God, I will maintain it as long as I can." By the addition of Portuguese troops who had been trained under British officers, his army was now raised to fifty

thousand men; and though his inferiority in force compelled him to look on while Massena reduced the frontier fortresses of Ciudad Rodrigo and Almeida, he inflicted on him a heavy check at the heights of Busaco, and finally fell back in October, 1810, on three lines of defence which he had secretly constructed at Torres Vedras, along a chain of mountain heights crowned with redoubts and bristling with cannon. The position was impregnable; and able and stubborn as Massena was he found himself forced after a month's fruitless efforts to fall back in a masterly retreat; but so terrible were the privations of the French army in passing again through the wasted country that it was only with forty thousand men that he reached Ciudad Rodrigo in the spring of 1811. Reinforced by fresh troops, Massena turned fiercely to the relief of Almeida, which Wellington had besieged; but two days' bloody and obstinate fighting in May, 1811, failed to drive the English army from its position at Fuentes d'Onoro, and the Marshal fell back on Salamanca and relinquished his effort to drive Wellington from Portugal.

Great as was the effect of Torres Vedras in restoring the spirit of the English people and in reviving throughout Europe the hope of resistance to the tyranny of Napoleon, its immediate result was little save the deliverance of Portugal. The French remained masters of all Spain save Cadiz and the eastern provinces, and even the east coast was reduced in 1811 by the vigor of General Suchet. While England thus failed to rescue Spain from the aggression of Napoleon, she was suddenly brought face to face with the result of her own aggression in America. The Orders in Council with which Canning had attempted to prevent the transfer of the carrying trade from English to neutral ships, by compelling all vessels on their way to ports under blockade to touch at British harbors, had at once created serious embarrassments with America. In the long strife between France and England, America had already borne much from both combatants, but above all from Britain. Not only had the English Government exercised its right of search, but it asserted a right of seizing English seamen found in American vessels; and as there were few means of discriminating between English seamen and American, the sailor of Maine or Massachusetts was often impressed to serve in the British fleet. Galled however as was America by outrages such as these, she

was hindered from resenting them by her strong disinclination to war, as well as by the profit which she drew from the maintenance of her neutral position. But the Orders in Council and the Milan Decree forced her into action, and she at once answered them by an embargo of trade with Europe. After a year's trial, however, America found it impossible to maintain the embargo; and at the opening of 1809 she exchanged the embargo for an Act of Non-Intercourse with France and England alone. But the Act was equally ineffective. The American Government was utterly without means of enforcing it on its land frontier; and it had small means of enforcing it at sea. Vessels sailed daily for British ports; and at last the Non-Intercourse Act was repealed altogether. All that America persisted in maintaining was an offer that if either Power would repeal its edicts, it would prohibit American commerce with the other. Napoleon seized on this offer, and after promising to revoke his Berlin and Milan Decrees he called on America to redeem her pledge. In February, 1811, therefore, the United States announced that all intercourse with Great Britain and her dependencies was at an end. The effect of this step was seen in a reduction of English exports during this year by a third of their whole amount. It was in vain that Britain pleaded that the Emperor's promises remained unfulfilled, and that the enforcement of non-intercourse with England was thus an unjust act, and an act of hostility. The pressure of the American policy, as well as news of the war-like temper which had at last grown up in the United States, made submission inevitable; for the industrial state of England was now so critical that to expose it to fresh shocks was to court the very ruin which Napoleon had planned.

During the earlier years of the war indeed the increase of wealth had been enormous. England was sole mistress of the seas. The war gave her possession of the colonies of Spain, of Holland, and of France; and if her trade was checked for a time by the Berlin Decree, the efforts of Napoleon were soon rendered fruitless by the vast smuggling system which sprang up along the southern coasts and the coast of North Germany. English exports had nearly doubled since the opening of the century. Manufactures profited by the discoveries of Watt and Arkwright; and the consumption of raw cotton in the mills of Lancashire rose during the same period from fifty

to a hundred millions of pounds. The vast accumulation of capital, as well as the vast increase of the population at this time, told upon the land, and forced agriculture into a feverish and unhealthy prosperity. Wheat rose to famine prices, and the value of land rose in proportion with the price of wheat. Inclosures went on with prodigious rapidity; the income of every landowner was doubled, while the farmers were able to introduce improvements into the processes of agriculture which changed the whole face of the country. But if the increase of wealth was enormous, its distribution was partial. During the fifteen years which preceded Waterloo, the number of the population rose from ten to thirteen millions, and this rapid increase kept down the rate of wages, which would naturally have advanced in a corresponding degree with the increase in the national wealth. Even manufactures, though destined in the long run to benefit the laboring classes, seemed at first rather to depress them; for one of the earliest results of the introduction of machinery was the ruin of a number of small trades which were carried on at home, and the pauperization of families who relied on them for support. In the winter of 1811 the terrible pressure of this transition from handicraft to machinery was seen in the Luddite, or machine-breaking, riots which broke out over the northern and midland counties; and which were only suppressed by military force. While labor was thus thrown out of its older grooves, and the rate of wages kept down at an artificially low figure by the rapid increase of population, the rise in the price of wheat, which brought wealth to the landowner and the farmer, brought famine and death to the poor, for England was cut off by the war from the vast corn-fields of the Continent or of America, which now-a-days redress from their abundance the results of a bad harvest. Scarcity was followed by a terrible pauperization of the laboring classes. The amount of the poor-rate rose fifty per cent.; and with the increase of poverty followed its inevitable result, the increase of crime.

The natural relation of trade and commerce to the general wealth of the people at large was thus disturbed by the peculiar circumstances of the time. The war enriched the landowner, the farmer, the merchant, the manufacturer; but it impoverished the poor. It is indeed from these fatal years which lie between the Peace of Luneville and Waterloo that we must

date that war of classes, that social severance between employers and employed, which still forms the main difficulty of English politics. But it is from these years too that we must date the renewal of that progressive movement in politics which had been suspended since the opening of the war. The publication of the *Edinburgh Review* in 1802 by a knot of young lawyers at Edinburgh marked a revival of the policy of constitutional and administrative progress which had been reluctantly abandoned by William Pitt. Jeremy Bentham gave a new vigor to political speculation by his advocacy of the doctrine of Utility, and his definition of "the greatest happiness of the greatest number" as the aim of political action. In 1809 Sir Francis Burdett revived the question of Parliamentary Reform. Only fifteen members supported his motion; and a reference to the House of Commons, in a pamphlet which he subsequently published, as "a part of our fellow-subjects collected together by means which it is not necessary to describe," was met by his committal to the Tower, where he remained till the prorogation of the Parliament. A far greater effect was produced by the perseverance with which Canning pressed year by year the question of Catholic Emancipation. So long as Perceval lived both efforts at Reform were equally vain; but on the accession of Lord Liverpool to power the advancing strength of a more liberal sentiment in the nation was felt by the policy of "moderate concession" which was adopted by the new ministry. Catholic Emancipation became an open question in the Cabinet itself, and was adopted in 1812 by a triumphant majority in the House of Commons, though still rejected by the Lords.

With social and political troubles thus awaking about them, even Tory statesmen were not willing to face the terrible consequences of a ruin of English industry, such as might follow from the junction of America with Napoleon. They were, in fact, preparing to withdraw the Orders in Council when their plans were arrested by the dissolution of the Perceval Ministry. Its position had from the first been a weak one. A return of the King's madness had made it necessary in the beginning of 1811 to confer the Regency by Act of Parliament on the Prince of Wales; and the Whig sympathies of the Prince threatened the Perceval Cabinet with dismissal. The insecurity of their position told on the conduct of the war;

for the apparent inactivity of Wellington during 1811 was really due to the hesitation and timidity of the ministers at home. In May, 1812, the assassination of Perceval by a maniac named Bellingham brought about the fall of his ministry; and fresh efforts were made by the Regent to install the Whigs in office. Mutual distrust however followed his attempts; and the old ministry was restored under the headship of Lord Liverpool, a man of no great abilities, but temperate, well informed, and endowed with a remarkable skill in holding discordant colleagues together. The most important of these colleagues was Lord Castlereagh, who became Secretary for Foreign Affairs. His first work was to meet the danger in which Canning had involved the country by his Orders in Council. At the opening of 1812 America, in despair of redress, had resolved on war; Congress voted an increase of both army and navy, and laid an embargo on all vessels in American harbors. Actual hostilities might still have been averted by the repeal of the Orders, on which the English Cabinet was resolved, but in the confusion which followed the murder of Perceval the opportunity was lost. On the 23d of June, only twelve days after the Ministry had been formed, the Orders were repealed; but when the news of the repeal reached America, it came six weeks too late. On the 18th of June an Act of Congress had declared America at war with Great Britain.

The moment when America entered into the great struggle was a critical moment in the history of mankind. Six days after President Madison issued his declaration of war, Napoleon crossed the Niemen on his march to Moscow. Successful as his policy had been in stirring up war between England and America, it had been no less successful in breaking the alliance which he had made with the Emperor Alexander at Tilsit and in forcing on a contest with Russia. On the one hand, Napoleon was irritated by the refusal of Russia to enforce strictly the suspension of all trade with England, though such a suspension would have ruined the Russian landowners. On the other, the Czar saw with growing anxiety the advance of the French Empire which sprang from Napoleon's resolve to enforce his system by a seizure of the northern coasts. In 1811 Holland, the Hanseatic towns, part of Westphalia, and the Duchy of Oldenburg were successively annexed, and the Duchy

of Mecklenburg threatened with seizure. A peremptory demand on the part of France for the entire cessation of intercourse with England brought the quarrel to a head; and preparations were made on both sides for a gigantic struggle. The best of the French soldiers were drawn from Spain to the frontier of Poland; and Wellington, whose army had been raised to a force of forty thousand Englishmen and twenty thousand Portuguese, profited by the withdrawal to throw off his system of defence and to assume an attitude of attack. Ciudad Rodrigo and Badajoz were taken by storm during the spring of 1812; and three days before Napoleon crossed the Niemen on his march on Moscow, Wellington crossed the Agueda in a march on Salamanca. After a series of masterly movements on both sides, Marmont with the French army of the North attacked the English on the hills in the neighborhood of that town. While he was marching round the right of the English position, his left wing remained isolated; and with a sudden exclamation of "Marmont is lost!" Wellington flung on it the bulk of his force, crushed it, and drove the whole army from the field. The loss on either side was nearly equal, but failure had demoralized the French army; and its retreat forced Joseph to leave Madrid, and Soult to evacuate Andalusia and to concentrate the Southern army on the eastern coast. While Napoleon was still pushing slowly over the vast plains of Poland, Wellington made his entry into Madrid in August, and began the siege of Burgos. The town however held out gallantly for a month, till the advance of the two French armies, now concentrated in the north and south of Spain, forced Wellington in October to a hasty retreat on the Portuguese frontier. If he had shaken the rule of the French in Spain in this campaign, his ultimate failure showed how firm a military hold they still possessed there. But the disappointment was forgotten in the news which followed it. At the moment when the English troops fell back from Burgos began the retreat of the Grand Army from Moscow. Victorious in a battle at Borodino, Napoleon had entered the older capital of Russia in triumph, and waited impatiently to receive proposals of peace from the Czar, when a fire kindled by its own inhabitants reduced the city to ashes. The French army was forced to fall back amidst the horrors of a Russian winter. Of the four hundred thousand combatants who formed the Grand Army

at its first outset, only a few thousand recrossed the Niemen in December.

In spite of the gigantic efforts which Napoleon made to repair the loss of the Grand Army, the spell which he had cast over Europe was broken by the retreat from Moscow. Prussia rose against him as the Russians crossed the Niemen in the spring of 1813; and the forces which held it were at once thrown back on the Elbe. In this emergency the military genius of the French Emperor rose to its height. With a fresh army of two hundred thousand men whom he had gathered at Mainz he marched on the allied armies of Russia and Prussia in May, cleared Saxony by a victory over them at Lutzen, and threw them back on the Oder by a fresh victory at Bautzen. Disheartened by defeat, and by the neutral attitude which Austria still preserved, the two powers consented in June to an armistice, and negotiated for peace. But Austria, though unwilling to utterly ruin France to the profit of her great rival in the East, was as resolute as either of the allies to wrest from Napoleon his supremacy over Europe; and at the moment when it became clear that Napoleon was only bent on playing with her proposals, she was stirred to action by news that his army was at last driven from Spain. Wellington had left Portugal in May with an army which had now risen to ninety thousand men; and overtaking the French forces in retreat at Vitoria he inflicted on them a defeat which drove them in utter rout across the Pyrenees. Madrid was at once evacuated; and Clauzel fell back from Zaragoza into France. The victory not only freed Spain from its invaders; it restored the spirit of the Allies. The close of the armistice was followed by a union of Austria with the forces of Prussia and the Czar; and in October a final overthrow of Napoleon at Leipzig forced the French army to fall back in rout across the Rhine. The war now hurried to its close. Though held at bay for a while by the sieges of San Sebastian and Pampeluna, as well as by an obstinate defence of the Pyrenees, Wellington succeeded in the very month of the triumph at Leipzig in winning a victory on the Bidassoa, which enabled him to enter France. He was soon followed by the Allies. On the last day of 1813 their forces crossed the Rhine; and a third of France passed, without opposition, into their hands. For two months more Napoleon maintained a wonderful struggle with a handful of

raw conscripts against their overwhelming numbers; while in the south, Soult, forced from his entrenched camp near Bayonne and defeated at Orthes, fell back before Wellington on Toulouse. Here their two armies met in April in a stubborn and indecisive engagement. But though neither leader knew it, the war was even then at an end. The struggle of Napoleon himself had ended at the close of March with the surrender of Paris; and the submission of the capital was at once followed by the abdication of the Emperor and the return of the Bourbons.

England's triumph over its enemy was dashed by the more doubtful fortunes of the struggle across the Atlantic. The declaration of war by America seemed an act of sheer madness; for its navy consisted of a few frigates and sloops; its army was a mass of half-drilled and half-armed recruits; while the States themselves were divided on the question of the war, and Connecticut with Massachusetts refused to send either money or men. Three attempts to penetrate into Canada during the summer and autumn were repulsed with heavy loss. But these failures were more than redeemed by unexpected successes at sea. In two successive engagements between English and American frigates, the former were forced to strike their flag. The effect of these victories was out of all proportion to their real importance; for they were the first heavy blows which had been dealt at England's supremacy over the seas. In 1813 America followed up its naval triumphs by more vigorous efforts on land. Its forces cleared Lake Ontario, captured Toronto, destroyed the British flotilla on Lake Erie, and made themselves masters of Upper Canada. An attack on Lower Canada, however, was successfully beaten back; and a fresh advance of the British and Canadian forces in the heart of the winter again recovered the Upper Province. The reverse gave fresh strength to the party in the United States which had throughout been opposed to the war, and whose opposition to it had been embittered by the terrible distress brought about by the blockade and the ruin of American commerce. Cries of secession began to be heard, and Massachusetts took the bold step of appointing delegates to confer with delegates from the other New England States "on the subject of their grievances and common concerns." In 1814, however, the war was renewed with more vigor than ever; and Upper Canada was

again invaded. But the American army, after inflicting a severe defeat on the British forces in the battle of Chippewa in July, was itself defeated a few weeks after in an equally stubborn engagement, and thrown back on its own frontier; while the fall of Napoleon enabled the English Government to devote its whole strength to the struggle with an enemy which it had ceased to despise. General Ross, with a force of four thousand men, appeared in the Potomac, captured Washington, and before evacuating the city burnt its public buildings to the ground. Few more shameful acts are recorded in our history; and it was the more shameful in that it was done under strict orders from the Government at home. The raid upon Washington, however, was intended simply to strike terror into the American people; and the real stress of the war was thrown on two expeditions whose business was to penetrate into the States from the north and from the south. Both proved utter failures. A force of nine thousand Peninsular veterans which marched in September to the attack of Plattsburg on Lake Champlain was forced to fall back by the defeat of the English flotilla which accompanied it. A second force under General Pakenham appeared in December at the mouth of the Mississippi and attacked New Orleans, but was repulsed by General Jackson with the loss of half its numbers. Peace, however, had already been concluded. The close of the French war, if it left untouched the grounds of the struggle, made the United States sensible of the danger of pushing it further; Britain herself was anxious for peace; and the warring claims, both of England and America, were set aside in silence in the treaty of 1814.

The close of the war with America freed England's hands at a moment when the reappearance of Napoleon at Paris called her to a new and final struggle with France. By treaty with the Allied Powers Napoleon had been suffered to retain a fragment of his former empire—the island of Elba off the coast of Tuscany; and from Elba he had looked on at the quarrels which sprang up between his conquerors as soon as they gathered at Vienna to complete the settlement of Europe. The most formidable of these quarrels arose from the claim of Prussia to annex Saxony, and that of Russia to annex Poland; but their union for this purpose was met by a counter-league of England and Austria with their old enemy France, whose

ambassador, Talleyrand, labored vigorously to bring the question to an issue by force of arms. At the moment, however, when a war between the two leagues seemed close at hand, Napoleon quitted Elba, landed on the coast near Cannes, and, followed only by a thousand of his guards, marched over the mountains of Dauphiné upon Grenoble and Lyons. He counted, and counted justly, on the indifference of the country to its new Bourbon rulers, on the longing of the army for a fresh struggle which should restore its glory, and above all on the spell of his name over soldiers whom he had so often led to victory. In twenty days from his landing he reached the Tuileries unopposed, while Louis the Eighteenth fled helplessly to Ghent. But whatever hopes he had drawn from the divisions of the Allied Powers were at once dispelled by their resolute action on the news of his descent upon France. Their strife was hushed and their old union restored by the consciousness of a common danger. An engagement to supply a million of men for the purposes of the war, and a recall of their armies to the Rhine, answered Napoleon's efforts to open negotiations with the powers. England furnished subsidies to the amount of eleven millions, and hastened to place an army on the frontier of the Netherlands. The best troops of the force which had been employed in the Peninsula, however, were still across the Atlantic; and of the eighty thousand men who gathered round Wellington only about a half were Englishmen, the rest principally raw levies from Belgium and Hanover. The Duke's plan was to unite with the one hundred and fifty thousand Prussians under Marshal Blucher who were advancing on the Lower Rhine, and to enter France by Mons and Namur, while the forces of Austria and Russia closed in upon Paris by way of Belfort and Elsass.

But Napoleon had thrown aside all thought of a merely defensive war. By amazing efforts he had raised an army of two hundred and fifty thousand men in the few months since his arrival in Paris; and in the opening of June, one hundred and twenty thousand Frenchmen were concentrated on the Sambre at Charleroi, while Wellington's troops still lay in cantonments on the line of the Scheldt from Ath to Nivelles, and Blucher's on that of the Meuse from Nivelles to Liège. Both the allied armies hastened to unite at Quatre Bras; but their junction was already impossible. Blucher, with eighty thou-

sand men was himself attacked by Napoleon at Ligny, and after a desperate contest driven back with terrible loss upon Wavre. On the same day Ney with twenty thousand men, and an equal force under D'Erlon in reserve, appeared before Quatre Bras, where as yet only ten thousand English and the same force of Belgian troops had been able to assemble. The Belgians broke before the charges of the French horse; but the dogged resistance of the English infantry gave time for Wellington to bring up corps after corps, till at the close of the day Ney saw himself heavily outnumbered, and withdrew baffled from the field. About five thousand men had fallen on either side in this fierce engagement: but heavy as was Wellington's loss, the firmness of the English army had already done much to foil Napoleon's effort at breaking through the line of the Allies. Blucher's retreat however left the English flank uncovered; and on the following day, while the Prussians were falling back on Wavre, Wellington with nearly seventy thousand men—for his army was now well in hand—withdrew in good order upon Waterloo, followed by the mass of the French forces under the Emperor himself. Napoleon had detached Marshal Grouchy with thirty thousand men to hang upon the rear of the beaten Prussians, while with a force of eighty thousand he resolved to bring Wellington to battle. On the morning of the 18th of June the two armies faced one another on the field of Waterloo in front of the Forest of Soignies, on the high road to Brussels. Napoleon's one fear had been that of a continued retreat. "I have them!" he cried, as he saw the English line drawn up on a low rise of ground which stretched across the high road from the château of Hougomont on its right to the farm and straggling village of La Haye Sainte on its left. He had some grounds for his confidence of success. On either side the forces numbered between seventy and eighty thousand men: but the French were superior in guns and cavalry, and a large part of Wellington's force consisted of Belgian levies who broke and fled at the outset of the fight. A fierce attack upon Hougomont opened the battle at eleven; but it was not till midday that the corps of D'Erlon advanced upon the centre near La Haye Sainte, which from that time bore the main brunt of the struggle. Never has greater courage, whether of attack or endurance, been shown on any field than was shown by both combatants

at Waterloo. The columns of D'Erlon, repulsed by the English foot, were hurled back in disorder by a charge of the Scots Greys; but the victorious horsemen were crushed in their turn by the French cuirassiers, and the mass of the French cavalry, twelve thousand strong, flung itself in charge after charge on the English front, carrying the English guns and sweeping with desperate bravery round the unbroken squares whose fire thinned their ranks. With almost equal bravery the French columns of the centre again advanced, wrested at last the farm of La Haye Sainte from their opponents, and pushed on vigorously though in vain under Ney against the troops in its rear. But meanwhile every hour was telling against Napoleon. To win the battle he must crush the English army before Blücher joined it; and the English army was still uncrushed. Terrible as was his loss, and many of his regiments were reduced to a mere handful of men, Wellington stubbornly held his ground while the Prussians, advancing from Wavre through deep and miry forest roads, were slowly gathering to his support, disregarding the attack on their rear by which Grouchy strove to hold them back from the field. At half-past four their advanced guard deployed at last from the woods; but the main body was far behind, and Napoleon was still able to hold his ground against them till their increasing masses forced him to stake all on a desperate effort against the English front. The Imperial Guard—his only reserve, and which had as yet taken no part in the battle—was drawn up at seven in two huge columns of attack. The first, with Ney himself at its head, swept all before it as it mounted the rise beside La Haye Sainte, on which the thin English line still held its ground, and all but touched the English front when its mass, torn by the terrible fire of musketry with which it was received, gave way before a charge. The second, three thousand strong, advanced with the same courage over the slope near Hougomont, only to be repulsed and shattered in its turn. At the moment when these masses fell slowly and doggedly back down the fatal rise, the Prussians pushed forward on Napoleon's right, their guns swept the road to Charleroi, and Wellington seized the moment for a general advance. From that hour all was lost. Only the Guard stood firm in the wreck of the French army; and though darkness and exhaustion checked the English in their pursuit of the broken troops as they hurried from the field, the Prussian

horse continued the chase through the night. Only forty thousand Frenchmen with some thirty guns recrossed the Sambre, while Napoleon himself fled hurriedly to Paris. His second abdication was followed by the triumphant entry of the English and Prussian armies into the French capital; and the long war ended with his exile to St. Helena, and the return of Louis the Eighteenth to the throne of the Bourbons.

EPILOGUE.

WITH the victory of Waterloo we reach a time within the memory of some now living, and the opening of a period of our history, the greatest indeed of all in real importance and interest, but perhaps too near to us as yet to admit of a cool and purely historical treatment. In a work such as the present at any rate it will be advisable to limit ourselves from this point to a brief summary of the more noteworthy events which have occurred in our political history since 1815.

The peace which closed the great war with Napoleon left Britain feverish and exhausted. Of her conquests at sea she retained only Malta (whose former possessors, the Knights of St. John had ceased to exist), the Dutch colonies of Ceylon, and the Cape of Good Hope, the French Colony of Mauritius, and a few West India islands. On the other hand the pressure of the heavy taxation and of the debt, which now reached eight hundred millions, was embittered by the general distress of the country. The rapid development of English industry for a time ran ahead of the world's demands; the markets at home and abroad were glutted with unsaleable goods, and mills and manufactories were brought to a standstill. The scarcity caused by a series of bad harvests was intensified by the selfish legislation of the landowners in Parliament. Conscious that the prosperity of English agriculture was merely factitious, and rested on the high price of corn produced by the war, they prohibited by an Act passed in 1815 the introduction of foreign corn till wheat had reached famine prices. Society, too, was disturbed by the great changes of employment consequent on a sudden return to peace after twenty years of war, and by the disbanding of the immense forces employed at sea and on land. The movement against machinery which had been put down in 1812 revived in formidable riots, and the distress of the rural poor brought about

a rapid increase of crime. The steady opposition too of the Administration, in which Lord Castlereagh's influence was now supreme, to any project of political progress created a dangerous irritation which brought to the front men whose demand of a "radical reform" in English institutions won them the name of Radicals, and drove more violent agitators into treasonable disaffection and silly plots. In 1819 the breaking up by military force of a meeting at Manchester, assembled for the purpose of advocating a reform in Parliament, increased the unpopularity of the Government; and a plot of some desperate men with Arthur Thistlewood at their head for the assassination of the whole Ministry, which is known as the Cato-Street Conspiracy, threw light on the violent temper which was springing up among its more extreme opponents. The death of George the Third in 1820, and the accession of his son the Prince Regent as George the Fourth, only added to the general disturbance of men's minds. The new King had long since forsaken his wife and privately charged her with infidelity; his first act on mounting the throne was to renew his accusations against her, and to lay before Parliament a bill for the dissolution of her marriage with him. The public agitation which followed on this step at last forced the Ministry to abandon the bill, but the shame of the royal family and the unpopularity of the King increased the general discontent of the country.

The real danger to public order, however, lay only in the blind opposition to all political change which confused wise and moderate projects of reform with projects of revolution; and in 1822 the suicide of Lord Castlereagh, who had now become Marquis of Londonderry, and to whom this opposition was mainly due, put an end to the policy of mere resistance. Canning became Foreign Secretary in Castlereagh's place, and with Canning returned the earlier and progressive policy of William Pitt. Abroad, his first act was to break with the "Holy Alliance," as it called itself, which the Continental courts had formed after the overthrow of Napoleon for the repression of revolutionary or liberal movements in their kingdoms, and whose despotic policy had driven Naples, Spain, and Portugal into revolt. Canning asserted the principle of non-interference in the internal affairs of foreign states, a principle he enforced by sending troops in 1826 to defend

Portugal from Spanish intervention, while he recognized the revolted colonies of Spain in South America and Mexico as independent states. At home his influence was seen in the new strength gained by the question of Catholic Emancipation, and in the passing of a bill for giving relief to Roman Catholics through the House of Commons in 1825. With the entry of his friend Mr. Huskisson into office in 1823 began a commercial policy which was founded on a conviction of the benefits derived from freedom of trade, and which brought about at a later time the repeal of the Corn Laws. The new drift of public policy produced a division among the Ministers which showed itself openly at Lord Liverpool's death in 1827. Canning became First Lord of the Treasury, but the Duke of Wellington, with the Chancellor, Lord Eldon, and the Home Secretary, Mr. Peel, refused to serve under him; and four months after the formation of Canning's Ministry it was broken up by his death. A temporary Ministry formed under Lord Goderich on Canning's principles was at once weakened by the position of foreign affairs. A revolt of the Greeks against Turkey had now lasted some years in spite of Canning's efforts to bring about peace, and the despatch of an Egyptian expedition with orders to devastate the Morea and carry off its inhabitants as slaves forced England, France, and Russia, to interfere. In 1827 their united fleet under Admiral Codrington attacked and destroyed that of Egypt in the bay of Navarino; but the blow at Turkey was disapproved by English opinion, and the Ministry, already wanting in Parliamentary strength, was driven to resign.

The formation of a purely Tory Ministry by the Duke of Wellington, with Mr. Peel for its principal support in the Commons, was generally looked on as a promise of utter resistance to all further progress. But the state of Ireland, where a "Catholic Association" formed by Daniel O'Connell maintained a growing agitation, had now reached a point when the English Ministry had to choose between concessions and civil war. The Duke gave way, and brought in a bill which, like that designed by Pitt, admitted Roman Catholics to Parliament, and to all but a few of the highest posts, civil or military, in the service of the Crown. The passing of this bill by the aid of the Whigs threw the Tory party into confusion; while the cry for Parliamentary Reform was suddenly revived with

a strength it had never known before by a Revolution in France, which drove Charles the Tenth from the throne and called his cousin, Louis Philippe, the Duke of Orleans, to reign as a Constitutional King. William the Fourth, who succeeded to the crown on the death of his brother, George the Fourth, at this moment was favorable to the demand of Reform, but Wellington refused all concession. The refusal drove him from office; and for the first time after twenty years the Whigs saw themselves again in power under the leadership of Earl Grey. A bill for Parliamentary Reform, which took away the right of representation from fifty-six decayed or rotten boroughs, gave the 143 members it gained to counties or large towns which as yet sent no members to Parliament, established a £10 householder qualification for voters in boroughs, and extended the county franchise to leaseholders and copyholders, was laid before Parliament in 1831. On its defeat the Ministry appealed to the country. The new House of Commons at once passed the bill, and so terrible was the agitation produced by its rejection by the Lords, that on its subsequent reintroduction the Peers who opposed it withdrew and suffered it to become law. The Reformed Parliament which met in 1833 did much by the violence and inexperience of many of its new members, and especially by the conduct of O'Connell, to produce a feeling of reaction in the country. On the resignation of Lord Grey in 1834 the Ministry was reconstituted under the leadership of Viscount Melbourne; and though this administration was soon dismissed by the King, whose sympathies had now veered round to the Tories, and succeeded for a short time by a Ministry under Sir Robert Peel, a general election again returned a Whig Parliament, and replaced Lord Melbourne in office. Weakened as it was by the growing change of political feeling throughout the country, no Ministry has ever wrought greater and more beneficial changes than the Whig Ministry under Lord Grey and Lord Melbourne during its ten years of rule. In 1833 the system of slavery which still existed in the British colonies, though the Slave Trade was suppressed, was abolished at a cost of twenty millions; the commercial monopoly of the East India Company was abolished, and the trade to the East thrown open to all merchants. In 1834 the growing evil of pauperism was checked by the enactment of a New Poor Law. In 1835 the Municipal Corporations Act restored to the in-

habitants of towns those rights of self-government of which they had been deprived since the fourteenth century. 1836 saw the passing of the General Registration Act, while the constant quarrels over tithe were remedied by the Act for Tithe Commutation, and one of the grievances of Dissenters redressed by a measure which allowed civil marriage. A system of national education, begun in 1834 by a small annual grant towards the erection of schools, was developed in 1839 by the creation of a Committee of the Privy Council for educational purposes and by the steady increase of educational grants.

Great however as these measures were, the difficulties of the Whig Ministry grew steadily year by year. Ireland, where O'Connell maintained an incessant agitation for the Repeal of the Union, could only be held down by Coercion Acts. In spite of the impulse given to trade by the system of steam communication which began with the opening of the Liverpool and Manchester Railway in 1830, the country still suffered from distress: and the discontent of the poorer classes gave rise in 1839 to riotous demands for "the People's Charter," including universal suffrage, vote by ballot, annual Parliaments, equal electoral districts, the abolition of all property qualification for members and payment for their services. In Canada a quarrel between the two districts of Upper and Lower Canada was suffered through mismanagement to grow into a formidable revolt. The vigorous but meddlesome way in which Lord Palmerston, a disciple of Canning, carried out that statesman's foreign policy, supporting Donna Maria as sovereign in Portugal and Isabella as Queen in Spain against claimants of more absolutist tendencies by a Quadruple Alliance with France and the two countries of the Peninsula, and forcing Mehemet Ali, the Pacha of Egypt, to withdraw from an attack on Turkey by the bombardment of Acre in 1840, created general uneasiness; while the public conscience was wounded by a war with China in 1839 on its refusal to allow the smuggling of opium into its dominions. A more terrible blow was given to the Ministry by events in India; where the occupation of Cabul in 1839 ended two years later in a general revolt of the Afghans and in the loss of a British army in the Khyber Pass. The strength of the Government was restored for a time by the death of William the Fourth in 1837 and the

accession of Victoria, the daughter of his brother Edward, Duke of Kent. With the accession of Queen Victoria ended the union of England and Hanover under the same sovereigns, the latter state passing to the next male heir, Ernest, Duke of Cumberland. But the Whig hold on the House of Commons passed steadily away, and a general election in 1800 gave their opponents, who now took the name of Conservatives, a majority of nearly a hundred members. The general confidence in Sir Robert Peel, who was placed at the head of the Ministry which followed that of Lord Melbourne, enabled him to deal vigorously with two of the difficulties which had most hampered his predecessors. The disorder of the public finances was repaired by the appeal of a host of oppressive and useless duties and by the imposition of an Income Tax. In Ireland O'Connell was charged with sedition and convicted, and though subsequently released from prison on appeal to the House of Lords, his influence received a shock from which it never recovered. Peace was made with China by a treaty which threw open some of its ports to traders of all nations; in India the disaster of Cabul was avenged by an expedition under General Pollock which penetrated victoriously to the capital of that country in 1842, and the province of Scinde was annexed to the British dominions. The shock, however, to the English power brought about fresh struggles for supremacy with the natives, and especially with the Sikhs, who were crushed for the time in three great battles at Moodkee, Ferozeshah, and Sobraon.

Successful as it proved itself abroad, the Conservative Government encountered unexpected difficulties at home. From the enactment of the Corn Laws in 1815 a dispute had constantly gone on between those who advocated these and similar measures as a protection to native industry and those who, viewing them as simply laying a tax on the consumer for the benefit of the producer, claimed entire freedom of trade with the world. In 1839 an Anti-Corn-Law League had been formed to enforce the views of the advocates of free trade; and it was in great measure the alarm of the farmers and landowners at its action which had induced them to give so vigorous a support to Sir Robert Peel. But though Peel entered office pledged to protective measures, his own mind was slowly veering round to a conviction of their inexpedi-

ency; and in 1846 the failure of the potato crop in Ireland and of the harvest in England forced him to introduce a bill for the repeal of the Corn Laws. The bill passed, but the resentment of his own party soon drove him from office; and he was succeeded by a Whig Ministry under Lord John Russell which remained in power till 1852. The first work of this Ministry was to carry out the policy of free trade into every department of British commerce; and from that time to this the maxim of the League, to "buy in the cheapest market and sell in the dearest," has been accepted as the law of our commercial policy. Other events were few. The general overthrow of the continental monarchs in the Revolution of 1848 found faint echoes in a feeble rising in Ireland under Smith O'Brien which was easily suppressed by a few policemen, and in a demonstration of the Chartists in London which passed off without further disturbance. A fresh war with the Sikhs in 1848 was closed by the victory of Goojerat and the annexation of the Punjaub in the following year.

The long peace which had been maintained between the European powers since the treaties of 1815 was now drawing to a close. In 1852 the Ministry of Lord John Russell was displaced by a short return of the Conservatives to power under Lord Derby; but a union of the Whigs with the Free Trade followers of Sir Robert Peel restored them to office at the close of the year. Lord Aberdeen, the head of the new administration, was at once compelled to resist the attempts of Russia to force on Turkey a humiliating treaty; and in 1854 England allied herself with Louis Napoleon, who had declared himself Emperor of the French, to resist the invasion of the Danubian Principalities by a Russian army. The army was withdrawn; but in September the allied force landed on the shores of the Crimea, and after a victory at the river Alma undertook the siege of Sebastopol. The garrison, however, soon proved as strong as the besiegers, and as fresh Russian forces reached the Crimea the Allies found themselves besieged in their turn. An attack on the English position at Inkermann on November the 5th was repulsed with the aid of a French division; but winter proved more terrible than the Russian sword, and the English force wasted away with cold or disease. The public indignation at its

sufferings forced the Aberdeen Ministry from office in the opening of 1855; and Lord Palmerston became Premier with a Ministry which included those members of the last administration who were held to be most in earnest in the prosecution of the war. After a siege of nearly a year the Allies at last became masters of Sebastopol in September, and Russia, spent with the strife, consented in 1856 to the Peace of Paris. The military reputation of England had fallen low during the struggle, and to this cause the mutiny of the native troops in Bengal, which quickly followed in 1857, may partly be attributed. Russian intrigues, Moslem fanaticism, resentment at the annexation of the kingdom of Oudh by Lord Dalhousie, and a fanatical belief on the part of the Hindoos that the English Government had resolved to make them Christians by forcing them to lose their caste have all been assigned as causes of an outbreak which still remains mysterious. A mutiny at Meerut in May was followed by the seizure of Delhi where the native king was enthroned as Emperor of Hindostan, by a fresh mutiny and massacre of the Europeans at Cawnpore, by the rising of Oudh and the siege of the Residency at Lucknow. The number of English troops in India was small, and for the moment all Eastern and Central Hindostan seemed lost; but Madras, Bombay, and the Punjaub remained untouched, and the English in Bengal and Oudh not only held their ground but marched upon Delhi, and in September took the town by storm. Two months later the arrival of reinforcements under Sir Colin Campbell relieved Lucknow, which had been saved till now by the heroic advance of Sir Henry Havelock with a handful of troops, and cleared Oudh of the mutineers. The suppression of the revolt was followed by a change in the government of India, which was transferred in 1858 from the Company to the Crown; the Queen being formally proclaimed its sovereign, and the Governor-General becoming her Viceroy.

The credit which Lord Palmerston won during the struggle with Russia and the Sepoys was shaken by his conduct in proposing an alteration in the law respecting conspiracies in 1858, in consequence of an attempt to assassinate Napoleon the Third which was believed to have originated on English ground. The violent language of the French army

brought about a movement for the enlistment of a Volunteer force, which soon reached a hundred and fifty thousand men; and so great was the irritation it caused that the bill, which was thought to have been introduced in deference to the demands of France, was rejected by the House of Commons. Lord Derby again became Prime Minister for a few months; but a fresh election in 1859 brought back Lord Palmerston, whose Ministry lasted till his death in 1865. At home his policy was one of pure inaction; and his whole energy was directed to the preservation of English neutrality in five great strifes which distracted not only Europe but the New World, a war between France and Austria in 1859 which ended in the creation of the kingdom of Italy, a civil war in America which began with the secession of the Southern States in 1861 and ended four years later in their subjugation, an insurrection of Poland in 1863, an attack of France upon Mexico, and of Austria and Prussia upon Denmark in 1864. The American war, by its interference with the supply of cotton, reduced Lancashire to distress; while the fitting out of piratical cruisers in English harbors in the name of the Southern Confederation gave America just grounds for an irritation which was only allayed at a far later time. Peace, however, was successfully preserved; and the policy of non-intervention was pursued after Lord Palmerston's death by his successor, Lord Russell, who remained neutral during the brief but decisive conflict between Prussia and Austria in 1866 which transferred to the former the headship of Germany.

With Lord Palmerston, however, passed away the policy of political inaction which distinguished his rule. Lord Russell had long striven to bring about a further reform of Parliament; and in 1866 he laid a bill for that purpose before the House of Commons, whose rejection was followed by the resignation of the Ministry. Lord Derby, who again became Prime Minister, with Mr. Disraeli as leader of the House of Commons, found himself however driven to introduce in 1867 a Reform Bill of a far more sweeping character than that which had failed in Lord Russell's hands. By this measure, which passed in August, the borough franchise was extended to all rate-payers, as well as to lodgers occupying rooms of the annual value of £10; the county franchise was fixed at £12, thirty-three members were withdrawn from

English boroughs, twenty-five of whom were transferred to English counties, and the rest assigned to Scotland and Ireland. Large numbers of the working classes were thus added to the constituencies; and the indirect effect of this great measure was at once seen in the vigorous policy of the Parliament which assembled after the new elections in 1868. Mr. Disraeli, who had become Prime Minister on the withdrawal of Lord Derby, retired quietly on finding that a Liberal majority of over one hundred members had been returned to the House of Commons; and his place was taken by Mr. Gladstone, at the head of a Ministry which for the first time included every section of the Liberal party. A succession of great measures proved the strength and energy of the new administration. Its first work was with Ireland, whose chronic discontent it endeavored to remove by the disestablishment and disendowment of the Protestant Church in 1869, and by a Land Bill which established a sort of tenant-right in every part of the country in 1870. The claims of the Non-conformists were met in 1868 by the abolition of compulsory church-rates, and in 1871 by the abolition of all religious tests for admission to offices or degrees in the Universities. Important reforms were undertaken in the management of the navy; and a plan for the entire reorganization of the army was carried into effect after the system of promotion to its command by purchase had been put an end to. In 1870 the question of national education was furthered by a bill which provided for the establishment of School Boards in every district, and for their support by means of local rates. In 1872 a fresh step in Parliamentary reform was made by the passing of a measure which enabled the votes of electors to be given in secret by means of the ballot. The greatness and rapidity of these changes, however, produced so rapid a reaction in the minds of the constituencies that on the failure of his attempt to pass a bill for organizing the higher education of Ireland, Mr. Gladstone felt himself forced in 1874 to consult public opinion by a dissolution of Parliament; and the return of a Conservative majority of nearly seventy members was necessarily followed by his retirement from office, Mr. Disraeli again becoming First Minister of the Crown.

SPECIAL INTRODUCTION

FRANÇOIS PIERRE GUILLAUME GUIZOT was born at Nismes, the fourth of October, 1787. His father was a distinguished advocate of that city, who took a prominent part in the revolution which overthrew the throne of Louis XVI. In the spring of 1794, having protested against the violence of the revolutionary tribunal, he died upon the scaffold. The care of Madame Guizot provided the boy with a classical education in the schools of the city of Geneva, and at the age of nineteen he went to Paris to study law. But he had no taste for the profession, and, with the help of the Minister from Switzerland, his friend and patron, he devoted himself to literary pursuits. At the age of twenty-five he was appointed adjunct Professor of History in the University of Paris, and two years later accepted the position of general secretary in the Bureau of the Ministry of the Interior. Henceforth his life was divided between history and politics, and in both he achieved the highest distinction.

Let us briefly review his political career. Before he was thirty he was an active agent in negotiating the terms for re-establishing the monarchy under Louis XVIII. On the accession of Louis Philippe in 1830, he was called to assist in forming a Cabinet and became Minister of the Interior. Compelled to resign in a few months, he was elected deputy, and sustained the cause of constitutional government in the National Assembly. Two years later he was recalled to the royal counsels as Minister of Public Instruction. During the few years of his administration he did much for public education in France, and it is said that the germinal ideas of all progress made since are to be found in his suggestions and enterprises. He reformed the primary schools, and put new spirit into their conduct by a law which established over ten thousand primary schools in destitute parishes. He planned

the creation of four universities to be centres of light and learning for the provinces of France. He made great efforts for the advancement of historical science and the improvement of historical teaching. The Society of French History was founded by him, and he began the publication by the government of the great *Collection des Documents relatifs à l'histoire de France*.

When the fall of the Cabinet compelled his retirement, he resumed his literary labors, and in 1836 was elected a member of the French Academy. It was during this period that he was invited by the American Government to edit a French edition of the "Letters of Washington." In 1839, his friends having been recalled to power, Guizot was appointed Minister to England. He was the first Protestant sent to England as Minister since the time of Henry IV. He had written ably upon English history. He had been known in politics as a liberal conservative, a defender of constitutional monarchy against despotism and radicalism. The reception given to him was, therefore, very warm. But within eighteen months he was recalled to enter a new Cabinet. He took the portfolio of foreign affairs, and for seven years was practically the leader of the French Government. His rule ended in disaster, for both his foreign and his home policy were definitely rejected by the French people. In foreign affairs he exerted an influence which in 1845 caused him to be hailed by a competent observer as "the man to whom perhaps more than to any other it is owing that Europe is now at peace." This policy of concession was very unpopular in France. But it was the home policy of Guizot, adhered to with the obstinacy of unchangeable conviction unwilling to make any adjustment to new circumstances or thoughts, which brought about his fall from power, and dragged down with him the French King. The ministry, although continuously supported by a majority of the Chambers, steadily lost the confidence of the nation, and this situation made evident the narrow basis of the French throne.

In 1842, one-third of the members of the Chamber of Deputies were salaried functionaries of the government, and the representatives of France had been chosen by about 225,000 electors. Ten attempts to change this situation were made in six years, and lost, in the Chamber of Deputies. Then the

opposition organized a popular protest, which in a few months developed into threatened insurrection. Guizot urged the king to establish his authority by the use of the army. Louis Philippe hesitated, and when the streets of Paris were filled with masses of people shouting "Long live Reform!" "Down with Guizot!" he abdicated. Guizot fled to England, whence he returned the next year.

He retired to his country place of Val-Richer, in Normandy, and bore his fall with the utmost dignity. Excluded from politics, he devoted himself to literary labors, to the cause of public education, and to the interests of the French Protestant Church. In September, 1874, when he was eighty-six, it became evident that death was at hand. "Adieu, my daughter," he said to his child kneeling at the foot of his bed. "Au revoir, my father," she answered. The dying man raised himself on the pillows: "No one is more sure of it than I," he said, and sank back into silence and death.

Few men who have achieved marked distinction have owed so little to circumstances and so much to industry and native ability as Guizot. He won by the gravity of his manners and the evidences of sound judgment the friends to whom he owed his early opportunities for distinction. His advancement in the service of the public educational system of France was more than justified by his services. His entry into political life was made natural, and almost inevitable, by the manifest power of his political pamphlets, and he developed by labor and practice a dignified and sonorous eloquence which made Rachel say she would gladly have acted in tragedy with him. His rise to the head of the French Government was the natural result of great public services, of unwavering fidelity to his political principles, and the ability with which he advocated them.

He won in letters a distinction as great as that which he achieved in politics. And it is more enduring. Few historians would include M. Guizot among the list of the great ministers of France. But still fewer critics would be willing to exclude him from the list of the great writers of France. It is doubtful whether he anticipated this result of his labors, or whether he would have been pleased if he had, for it has been said of him with some justice that "his books of history were never to him anything but a means of action, a method of spreading

his ideas." This attitude, perhaps, imposed upon his treatment of history something of the same narrow horizon which limited his political usefulness by limiting his political sympathies. In the great spectacle of European history nothing really interested him except in so far as it contributed to the rise of the middle classes, and the development of the sort of government which gave them the largest political influence. His writing of history was like his political conduct, a logical development of his political principles.

The list of his writings is a long one. It includes: "A History of Civilization in France," four volumes; "Washington," six volumes; "A History of the English Revolution," six volumes; "Parliamentary History of France," five volumes; "Memoirs," eight volumes; "History of France," five volumes; "Meditations and Moral Studies," "Shakespeare and His Times," "Corneille and His Times," "Love in Marriage." The essay upon the "History of Civilization in Europe" is the best known and most often reprinted of his works, and shows plainly some of the marked characteristics of his historical method. It was written as an introduction to his larger and more valuable work, "The History of Civilization in France," and first delivered as a course of lectures at the Sorbonne in Paris.

These works of Guizot were introduced to English readers in 1845 by an article from John Stuart Mill, in the "Edinburgh Review." He spoke of them as "speculations, which even in this unfinished state may be ranked with the most valuable contributions yet made to universal history," and points out that, on such a topic as the cause of the fall of the Roman Empire, "the difference between what we learn from Gibbon and what we learn from Guizot is a measure of the progress of historical inquiry between them."

If a writer with the capacity of Gibbon, or even of Guizot, for the constructive treatment of large themes, should write a history of European civilization *now*, the difference between his work and that here printed would undoubtedly be a measure of the progress of historical inquiry in the last fifty years. For the increase of historical knowledge causes the masterpieces of one generation to be republished with foot-notes for the next. Many modern historians would question the possibility of sketching the history of European civilization in

an essay. The increase of knowledge, the change in historical method, the prevailing taste in some leading schools of history, would lead many others to criticise the historical work of Guizot in various respects. But of those qualified to criticise the essay on the "History of Civilization in Europe," very few would undertake to replace by a better one the only short sketch of the general progress of European history which has ever achieved any large measure of fame.

PAUL VAN DYKE.

CONTENTS

FIRST LECTURE.

Object of the course—History of European civilization—Part taken by France in the civilization of Europe—Civilization a fit subject for narrative—It is the most general fact in history—The ordinary and popular meaning of the word *civilization*—Two leading facts constitute civilization: 1. The development of society; 2. The development of the individual—Demonstration—These two facts are necessarily connected the one with the other, and sooner or later the one produces the other—Is the destiny of man limited wholly within his actual social condition?—The history of civilization may be exhibited and considered under two points of view—Remarks on the plan of the course—The present state of men's minds, and the prospects of civilization.....

SECOND LECTURE.

Purpose of the lecture—Unity of ancient civilization—Variety of modern civilization—Its superiority—Condition of Europe at the fall of the Roman Empire—Preponderance of the towns—Attempt at political reform by the emperors—Rescript of Honorius and of Theodosius II—Power of the name of the Empire—The Christian church—The various stages through which it had passed at the fifth century—The clergy exercising municipal functions—Good and evil influence of the church—The barbarians—They introduce into the modern world the sentiments of personal independence, and the devotion of man to man—Summary of the different elements of civilization in the beginning of the fifth century..... 18

THIRD LECTURE.

Object of the lecture—All the various systems pretend to be legitimate—What is political legitimacy?—Coexistence of all systems of government in the fifth century—Instability in the condition of persons, properties, and institutions—There were two causes of this: one material, the continuation of the invasion; the other moral, the selfish sentiment of individuality peculiar to the barbarians—The germs of civilization have been the necessity for order, the recollections of the Roman Empire, the Christian church, and the barbarians—Attempts at organization by the barbarians, by the towns, by the church of Spain, by Charlemagne, and Alfred—The German and Arabian invasions cease—The feudal system begins..... 37

FOURTH LECTURE.

PAGE

Object of the lecture—Necessary alliance between facts and doctrines—Preponderance of the country over the towns—Organization of a small feudal society—Influence of feudalism upon the character of the possessor of the fief, and upon the spirit of family—Hatred of the people towards the feudal system—The priest could do little for the serfs—Impossibility of regularly organizing feudalism: 1. No powerful authority; 2. No public power; 3. Difficulty of the federative system—The idea of the right of resistance inherent in feudalism—Influence of feudalism favorable to the development of the individual, unfavorable to social order..... 53

FIFTH LECTURE.

Object of the lecture—Religion is a principle of association—Constraint is not of the essence of government—Conditions of the legitimacy of a government: 1. The power must be in the hands of the most worthy; 2. The liberty of the governed must be respected—The church being a corporation and not a caste, fulfilled the first of these conditions—Of the various methods of nomination and election that existed therein—It wanted the other condition, on account of the illegitimate extension of authority, and on account of the abusive employment of force—Movement and liberty of spirit in the bosom of the church—Relations of the church with princes—The independence of spiritual power laid down as a principle—Pretensions and efforts of the church to usurp the temporal power..... 70

SIXTH LECTURE.

Object of the lecture—Separation of the governing and the governed party in the church—Indirect influence of the laity upon the clergy—The clergy recruited from all conditions of society—Influence of the church upon the public order and upon legislation—The penitential system—The development of the human mind is entirely theological—The church usually ranges itself on the side of power—Not to be wondered at; the aim of religions is to regulate human liberty—Different states of the church, from the fifth to the twelfth century—1st. The imperial church—2d. The barbaric church; development of the separating principle of the two powers; the monastic order—3d. The feudal church; attempts at organization; want of reform; Gregory VII—The theocratical church—Regeneration of the spirit of inquiry; Abailard—Movement of the boroughs—No connection between these two facts..... 86

SEVENTH LECTURE.

Object of the lecture—Comparative picture of the state of the boroughs at the twelfth and the eighteenth century—Double question—1st. The enfranchisement of the boroughs—State of the towns from the fifth to the tenth century—Their decay and regeneration—Communal insurrection—Charters—Social and

CONTENTS

xi

PAGE

moral effects of the enfranchisement of the boroughs—2d. Internal government of the boroughs—Assemblies of the people—Magistrates—High and low burghership—Diversity of the state of the boroughs in the different countries of Europe..... 104

EIGHTH LECTURE.

Object of the lecture—Glance at the general history of European civilization—Its distinctive and fundamental character—Epoch at which that character began to appear—State of Europe from the twelfth to the sixteenth century—Character of the crusades—Their moral and social causes—These causes no longer existed at the end of the thirteenth century—Effects of the crusades upon civilization..... 121

NINTH LECTURE.

Object of the lecture—Important part taken by royalty in the history of Europe, and in the history of the world—True causes of this importance—Two-fold point of view under which the institution of royalty should be considered—1st. Its true and permanent nature—It is the personification of the sovereignty of right—With what limits—2d. Its flexibility and diversity—European royalty seems to be the result of various kinds of royalty—Of barbarian royalty—Of imperial royalty—Of religious royalty—Of feudal royalty—Of modern royalty, properly so called, and of its true character..... 135

TENTH LECTURE.

Object of the lecture—Attempts to reconcile the various social elements of modern Europe, and to make them live and act in common, in one society, and under one central power—1st. Attempt at theocratical organization—Why it failed—Four principal obstacles—Faults of Gregory VII—Reaction against the domination of the church—On the part of the people—On the part of the sovereigns—2d. Attempt at republican organization—Italian republics—Their defects—Towns in the south of France—Crusade of the Albigenses—Swiss confederation—Boroughs of Flanders and the Rhine—Hanseatic league—Struggle between the feudal nobility and the boroughs—3d. Attempt at a mixed organization—States-general of France—Cortes of Spain and Portugal—English Parliament—Peculiar state of Germany—Ill success of all their attempts—From what causes—General tendency of Europe..... 148

ELEVENTH LECTURE.

Object of the lecture—Special character of the fifteenth century—Progressive centralization of nations and governments—1st. Of France—Formation of the national French spirit—Government of Louis XI—2d. Of Spain—3d. of Germany—4th. Of England—5th. Of Italy—Origin of the external relations of states and of diplomacy—Movement in religious ideas—Attempt at

	PAGE
aristocratical reform—Council of Constance and Basle—Attempt at popular reform—John Huss—Regeneration of literature—Admiration for antiquity—Classical school, or free-thinkers—General activity—Voyages, discoveries, inventions—Conclusion.....	162

TWELFTH LECTURE.

Object of the lecture—Difficulty of distinguishing general facts in modern history—Picture of Europe in the sixteenth century—Danger of precipitate generalization—Various causes assigned to the Reformation—Its dominant character was the insurrection of the human mind against absolute power in the intellectual order—Evidences of this fact—Fate of the Reformation in different countries—Weak side of the Reformation—The Jesuits—Analogy between the revolutions of religious society and those of civil society.....	176
--	-----

THIRTEENTH LECTURE.

Object of the lecture—General character of the English revolution—Its principal causes—It was more political than religious—The three great parties in it: 1. The party of legal reform; 2. The party of the political revolution; 3. The party of the social revolution—They all fail—Cromwell—The restoration of the Stuarts—The legal ministry—The profligate ministry—The revolution of 1688 in England and Europe.....	190
---	-----

FOURTEENTH LECTURE.

Object of the lecture—Difference and likeness between the progress of civilization in England and on the Continent—Preponderance of France in Europe in the seventeenth and eighteenth centuries—In the seventeenth century by reason of the French government—In the eighteenth by reason of the country itself—Of the government of Louis XIV—Of his wars—Of his diplomacy—Of his administration—Of his legislation—Causes of his rapid decline—Of France in the eighteenth century—Essential characteristics of the philosophical revolution—Conclusion of the course.....	204
---	-----

CIVILIZATION IN EUROPE.

FIRST LECTURE.

GENTLEMEN: I am deeply affected by the reception you give me, and which, you will permit me to say, I accept as a pledge of the sympathy which has not ceased to exist between us, notwithstanding so long a separation. Alas! I speak as though you, whom I see around me, were the same who, seven years ago, used to assemble within these walls, to participate in my then labors; because I myself am here again, it seems as if all my former hearers should be here also; whereas, since that period, a change, a mighty change, has come over all things. Seven years ago we repaired hither, depressed with anxious doubts and fears, weighed down with sad thoughts and anticipations; we saw ourselves surrounded with difficulty and danger; we felt ourselves dragged on toward an evil which we essayed to avert by calm, grave, cautious reserve, but in vain. Now, we meet together, full of confidence and hope, the heart at peace, thought free. There is but one way in which we can worthily manifest our gratitude for this happy change; it is bringing to our present meetings, our new studies, the same calm tranquillity of mind, the same firm purpose, which guided our conduct when, seven years ago, we looked, from day to day, to have our studies placed under rigorous supervision, or, indeed, to be arbitrarily suspended. Good fortune is delicate, frail, uncertain; we must keep measures with hope as with fear; convalescence requires well nigh the same care, the same caution, as the approaches of illness. This care, this caution, this moderation, I am sure you will exhibit. The same sympathy, the same intimate conformity of opinions, of sentiments, of ideas, which united us in times of difficulty and danger, and which at least saved us from grave faults, will equally unite us in more auspicious days, and enable us to gather all their fruits. I rely with confidence upon your coöperation, and I need nothing more.

The time between this our first meeting and the close of the year is very limited; that which I myself have had,

wherein to meditate upon the Lectures I am about to deliver, has been infinitely more limited still. One great point, therefore, was the selection of a subject, the consideration of which might best be brought within the bounds of the few months which remain to us of this year, within that of the few days I have had for preparation; and it appeared to me that a general review of the modern history of Europe, considered with reference to the development of civilization—a general sketch, in fact, of the history of European civilization, of its origin, its progress, its aim, its character, might suitably occupy the time at our disposal. This, accordingly, is the subject of which I propose to treat.

I have used the term European civilization, because it is evident that there is an European civilization; that a certain unity pervades the civilization of the various European states; that, notwithstanding infinite diversities of time, place and circumstance, this civilization takes its first rise in facts almost wholly similar, proceeds everywhere upon the same principles, and tends to produce well nigh everywhere analogous results. There is, then, an European civilization, and it is to the subject of this aggregate civilization that I will request your attention.

Again, it is evident that this civilization cannot be traced back, that its history cannot be derived from the history of any single European state. If, on the one hand, it is manifestly characterized by brevity, on the other, its variety is no less prodigious; it has not developed itself with completeness, in any one particular country. The features of its physiognomy are wide-spread; we must seek the elements of its history, now in France, now in England, now in Germany, now in Spain.

We of France occupy a favorable position for pursuing the study of European civilization. Flattery of individuals, even of our country, should be at all times avoided; it is without vanity, I think, we may say that France has been the center, the focus of European civilization. I do not pretend, it were monstrous to do so, that she has always, and in every direction, marched at the head of nations. At different epochs, Italy has taken the lead of her, in the arts; England, in political institutions; and there may be other respects under which, at particular periods, other European nations have manifested a superiority to her; but it is impossible to deny, that whenever France has seen herself thus outstripped in the career of civilization, she has called up fresh vigor, has sprung forward with a new impulse, and has soon found herself abreast with, or in advance of all the rest. And not only has this been the peculiar fortune of France, but we have seen that when the

civilizing ideas and institutions which have taken their rise in other lands have sought to extend their sphere, to become fertile and general, to operate for the common benefit of European civilization, they have been necessitated to undergo, to a certain extent, a new preparation in France; and it has been from France, as from a second native country, that they have gone forth to the conquest of Europe. There is scarcely any great idea, any great principle of civilization, which, prior to its diffusion, has not passed in this way through France.

And for this reason: there is in the French character something sociable, something sympathetic, something which makes its way with greater facility and effect than does the national genius of any other people; whether from our language, whether from the turn of our mind, of our manners, certain it is that our ideas are more popular than those of other people, present themselves more clearly and intelligibly to the masses and penetrate among them more readily; in a word, perspicuity, sociability, sympathy, are the peculiar characteristics of France, of her civilization, and it is these qualities which rendered her eminently fit to march at the very head of European civilization.

In entering, therefore, upon the study of this great fact, it is no arbitrary or conventional choice to take France as the center of this study; we must needs do so if we would place ourselves, as it were, in the very heart of civilization, in the very heart of the fact we are about to consider.

I use the term *fact*, and I do so purposely; civilization is a fact like any other—a fact susceptible, like any other, of being studied, described, narrated.

For some time past, there has been much talk of the necessity of limiting history to the narration of facts; nothing can be more just; but we must always bear in mind that there are far more facts to narrate, and that the facts themselves are far more various in their nature, than people are at first disposed to believe; there are material, visible facts, such as wars, battles, the official acts of governments; there are moral facts, none the less real that they do not appear on the surface; there are individual facts which have denominations of their own; there are general facts, without any particular designation, to which it is impossible to assign any precise date, which it is impossible to bring within strict limits, but which are yet no less facts than the rest, historical facts, facts which we cannot exclude from history without mutilating history.

The very portion of history which we are accustomed to call its philosophy, the relation of events to each other, the connection which unites them, their causes and their effects,—

these are all facts, these are all history, just as much as the narratives of battles, and of other material and visible events. Facts of this class it is doubtless more difficult to disentangle and explain; we are more liable to error in giving an account of them, and it is no easy thing to give them life and animation, to exhibit them in clear and vivid colors; but this difficulty in no degree changes their nature; they are none the less an essential element of history.

Civilization is one of these facts; general, hidden, complex fact; very difficult, I allow, to describe, to relate, but which none the less for that exists, which, none the less for that, has a right to be described and related. We may raise as to this fact a great number of questions; we may ask, it has been asked, whether it is a good or an evil? Some bitterly deplore it; others rejoice at it. We may ask, whether it is an universal fact, whether there is an universal civilization of the human species, a destiny of humanity; whether the nations have handed down from age to age, something which has never been lost, which must increase, from a larger and larger mass, and thus pass on to the end of time? For my own part, I am convinced that there is, in reality, a general destiny of humanity, a transmission of the aggregate of civilization; and, consequently, an universal history of civilization to be written. But without raising questions so great, so difficult to solve, if we restrict ourselves to a definite limit of time and space, if we confine ourselves to the history of a certain number of centuries, of a certain people, it is evident that within these bounds, civilization is a fact which can be described, related—which is history. I will at once add, that this history is the greatest of all, that it includes all.

And, indeed, does it not seem to yourselves that the fact civilization is the fact *par excellence*—the general and definitive fact, in which all the others terminate, into which they all resolve themselves? Take all the facts which compose the history of a nation, and which we are accustomed to regard as the elements of its life; take its institutions, its commerce, its industry, its wars, all the details of its government: when we would consider these facts in their aggregate, in their connection, when we would estimate them, judge them, we ask in what they have contributed to the civilization of that nation, what part they have taken in it, what influence they have exercised over it. It is in this way that we not only form a complete idea of them, but measure and appreciate their true value; they are, as it were, rivers, of which we ask what quantity of water it is they contribute to the ocean? For civilization is a sort of ocean, constituting the wealth of a people, and on whose bosom all the elements of the life of that

people, all the powers supporting its existence, assemble and unite. This is so true, that even facts, which from their nature are odious, pernicious, which weigh painfully upon nations, despotism, for example, and anarchy, if they have contributed in some way to civilization, if they have enabled it to make an onward stride, up to a certain point we pardon them, we overlook their wrongs, their evil nature; in a word, wherever we recognize civilization, whatever the facts which have created it, we are tempted to forget the price it has cost.

There are, moreover, facts which, properly speaking, we cannot call social; individual facts, which seem to interest the human soul rather than the public life: such are religious creeds and philosophical ideas, sciences, letters, arts. These facts appear to address themselves to man with a view to his moral perfection, his intellectual gratification; to have for their object his internal amelioration, his mental pleasure, rather than his social condition. But, here again, it is with reference to civilization that these very facts are often considered, and claim to be considered.

At all times, in all countries, religion has assumed the glory of having civilized the people; sciences, letters, arts, all the intellectual and moral pleasures, have claimed a share of this glory; and we have deemed it a praise and an honor to them, when we have recognized this claim on their part. Thus, facts the most important and sublime in themselves, independently of all external result, and simply in their relations with the soul of man, increase in importance, rise in sublimity from their affinity with civilization. Such is the value of this general fact, that it gives value to everything it touches. And not only does it give value; there are even occasions when the facts of which we speak, religious creeds, philosophical ideas, letters, arts, are especially considered and judged of with reference to their influence upon civilization; an influence which becomes, up to a certain point and during a certain time, the conclusive measure of their merit, of their value.

What, then, I will ask, before undertaking its history, what, considered only in itself, what is this so grave, so vast, so precious fact, which seems the sum, the expression of the whole life of nations?

I shall take care here not to fall into pure philosophy; not to lay down some ratiocinative principle, and then deduce from it the nature of civilization as a result; there would be many chances of error in this method. And here again we have a fact to verify and describe.

For a long period, and in many countries, the word *civilization* has been in use; people have attached to the word

ideas more or less clear, more or less comprehensive; but there it is in use, and those who use it attach some meaning or other to it. It is the general, human, popular meaning of this word that we must study. There is almost always in the usual acceptation of the most general terms more accuracy than in the definitions, apparently more strict, more precise, of science. It is common sense which gives to words their ordinary signification, and common sense is the characteristic of humanity. The ordinary signification of a word is formed by gradual progress and in the constant presence of facts; so that when a fact presents itself which seems to come within the meaning of a known term, it is received into it, as it were, naturally; the signification of the term extends itself, expands, and by degrees the various facts, the various ideas which from the nature of things themselves men should include under this word, are included.

When the meaning of a word, on the other hand, is determined by science, this determination, the work of one individual, or of a small number of individuals, takes place under the influence of some particular fact which has struck upon the mind. Thus, scientific definitions are, in general, much more narrow, and, hence, much less accurate, much less true at bottom, than the popular meanings of the terms. In studying as a fact the meaning of the word civilization, in investigating all the ideas which are comprised within it, according to the common sense of mankind, we shall make a much greater progress toward a knowledge of the fact itself than by attempting to give it ourselves a scientific definition, however more clear and precise the latter might appear at first.

I will commence this investigation by endeavoring to place before you some hypotheses: I will describe a certain number of states of society, and we will then inquire whether general instinct would recognize in them the condition of a people civilizing itself; whether we recognize in them the meaning which mankind attaches to the word civilization?

First, suppose a people whose external life is easy, is full of physical comfort; they pay few taxes, they are free from suffering; justice is well administered in their private relations—in a word, material existence is for them altogether happy and happily regulated. But at the same time, the intellectual and moral existence of this people is studiously kept in a state of torpor and inactivity; of, I will not say, oppression, for they do not understand the feeling, but of compression. We are not without instances of this state of things. There has been a great number of small aristocratic republics in which the people have been thus treated like flocks of sheep, well kept and

materially happy, but without moral and intellectual activity. Is this civilization? Is this a people civilizing itself?

Another hypothesis: here is a people whose material existence is less easy, less comfortable, but still supportable. On the other hand, moral and intellectual wants have not been neglected, a certain amount of mental pasture has been served out to them; elevated, pure sentiments are cultivated in them; their religious and moral views have attained a certain degree of development; but great care is taken to stifle in them the principle of liberty; the intellectual and moral wants, as in the former case the material wants, are satisfied; each man has meted out to him his portion of truth; no one is permitted to seek it for himself. Immobility is the characteristic of moral life; it is the state into which have fallen most of the populations of Asia; wherever theocratic dominations keep humanity in check; it is the state of the Hindoos, for example. I ask the same question here as before; is this a people civilizing itself?

I change altogether the nature of the hypothesis: here is a people among whom is a great display of individual liberties, but where disorder and inequality are excessive: it is the empire of force and of chance; every man, if he is not strong, is oppressed, suffers, perishes; violence is the predominant feature of the social state. No one is ignorant that Europe has passed through this state. Is this a civilized state? It may, doubtless, contain principles of civilization which will develop themselves by successive degrees; but the fact which dominates in such a society is, assuredly, not that which the common sense of mankind call civilization.

I take a fourth and last hypothesis: the liberty of each individual is very great, inequality among them is rare, and at all events, very transient. Every man does very nearly just what he pleases, and differs little in power from his neighbor; but there are very few general interests, very few public ideas, very little society,—in a word, the faculties and existence of individuals appear and then pass away, wholly apart and without acting upon each other, or leaving any trace behind them; the successive generations leave society at the same point at which they found it: this is the state of savage tribes; liberty and equality are there, but assuredly not civilization.

I might multiply these hypotheses, but I think we have before us enough to explain what is the popular and natural meaning of the word *civilization*.

It is clear that none of the states I have sketched corresponds, according to the natural good sense of mankind, to this term. Why? It appears to me that the first fact comprised in the word *civilization* (and this results from the

different examples I have rapidly placed before you) is the fact of progress, of development; it presents at once the idea of a people marching onward, not to change its place, but to change its condition; of a people whose culture is condition itself, and ameliorating itself. The idea of progress, of development, appears to me the fundamental idea contained in the word, *civilization*. What is this progress? what this development? Herein is the greatest difficulty of all.

The etymology of the word would seem to answer in a clear and satisfactory manner: it says that it is the perfecting of civil life, the development of society, properly so called, of the relations of men among themselves.

Such is, in fact, the first idea which presents itself to the understanding when the word civilization is pronounced; we at once figure forth to ourselves the extension, the greatest activity, the best organization of the social relations: on the one hand, an increasing production of the means of giving strength and happiness to society; on the other, a more equitable distribution, among individuals, of the strength.

Is this all? Have we here exhausted all the natural, ordinary meaning of the word civilization? Does the fact contain nothing more than this?

It is almost as if we asked: is the human species after all a mere ant-hill, a society in which all that is required is order and physical happiness, in which the greater the amount of labor, and the more equitable the division of the fruits of labor, the more surely is the object attained, the progress accomplished?

Our instinct at once feels repugnant to so narrow a definition of human destiny. It feels at the first glance that the word civilization comprehends something more extensive, more complex, something superior to the simple perfection of the social relations, of social power and happiness.

Fact, public opinion, the generally received meaning of the term, are in accordance with this instinct.

Take Rome in the palmy days of the republic, after the second Punic war, at the same time of its greatest virtues, when it was marching to the empire of the world, when its social state was evidently in progress. Then take Rome under Augustus, at the epoch when her decline began, when, at all events, the progressive movement of society was arrested, when evil principles were on the eve of prevailing; yet there is no one who does not think and say that the Rome of Augustus was more civilized than the Rome of Fabricius or of Cincinnatus.

Let us transport ourselves beyond the Alps: let us take the France of the seventeenth and eighteenth centuries: it is

evident that, in a social point of view, considering the actual amount and distribution of happiness among individuals, the France of the seventeenth and eighteenth centuries was inferior to some other countries of Europe, to Holland and to England, for example. I believe that in Holland and in England the social activity was greater, was increasing more rapidly, distributing its fruit more fully, than in France, yet ask general good sense, and it will say that the France of the seventeenth and eighteenth centuries was the most civilized country in Europe. Europe has not hesitated in her affirmative reply to the question: traces of this public opinion, as to France, are found in all the monuments of European literature.

We might point out many other states in which the prosperity is greater, is of more rapid growth, is better distributed among individuals than elsewhere, and in which, nevertheless, by the spontaneous instinct, the general good sense of men, the civilization is judged inferior to that of countries not so well portioned out in a purely social sense.

What does this mean; what advantages do these latter countries possess? What is it gives them, in the character of civilized countries, this privilege; what so largely compensates in the opinion of mankind for what they so lack in other respects?

A development other than that of social life has been gloriously manifested by them; the development of the individual, internal life, the development of man himself, of his faculties, his sentiments, his ideas. If society with them be less perfect than elsewhere, humanity stands forth in more grandeur and power. There remain, no doubt, many social conquests to be made; but immense intellectual and moral conquests are accomplished; worldly goods, social rights, are wanting to many men; but many great men live and shine in the eyes of the world. Letters, sciences, the arts, display all their splendor. Wherever mankind beholds these great signs, these signs glorified by human nature, wherever it sees created these treasures of sublime enjoyment, it there recognizes and names civilization.

Two facts, then, are comprehended in this great fact; it subsists on two conditions, and manifests itself by two symptoms: the development of social activity, and that of individual activity; the progress of society and the progress of humanity. Wherever the external condition of man extends itself, vivifies, ameliorates itself; wherever the internal nature of man displays itself with lustre, with grandeur; at these two signs, and often despite the profound imperfection of the social state, mankind with loud applause proclaims civilization.

Such, if I do not deceive myself, is the result of simple and purely common-sense examination of the general opinion of mankind. If we interrogate history, properly so-called, if we examine what is the nature of the great crises of civilization, of those facts which, by universal consent, have propelled it onward, we shall constantly recognize one or other of the two elements I have just described. They are always crises of individual or social development, facts which have changed the internal man, his creed, his manners, or his external condition, his position in his relation with his fellows. Christianity, for example, not merely on its first appearance, but during the first stages of its existence, Christianity in no degree addressed itself to the social state; it announced aloud that it would not meddle with the social state; it ordered the slave to obey his master; it attacked none of the great evils, the great wrongs of the society of that period. Yet who will deny that Christianity was a great crisis of civilization? Why was it so? Because it changed the internal man, creeds, sentiments; because it regenerated the moral man, the intellectual man.

We have seen a crisis of another nature, a crisis which addressed itself, not to the internal man, but to his external condition; one which changed and regenerated society. This also was assuredly one of the decisive crises of civilization. Look through all history, you will find everywhere the same result; you will meet with no important fact instrumental in the development of civilization, which has not exercised one or other of the two sorts of influence I have spoken of.

Such, if I mistake not, is the natural and popular meaning of the term; you have here the fact, I will not say defined, but described, verified almost completely, or, at all events, in its general features. We have before us the two elements of civilization. Now comes the question, would one of these two suffice to constitute it; would the development of the social state, the development of the individual man, separately presented, be civilization? Would the human race recognize it as such, or have the two facts so intimate and necessary a relation between them, that if they are not simultaneously produced, they are notwithstanding inseparable, and sooner or later one brings on the other?

We might, as it appears to me, approach this question on three several sides. We might examine the nature itself of the two elements of civilization, and ask ourselves whether by that alone, they are or are not closely united with, and necessary to each other. We might inquire of history whether they had manifested themselves isolately, apart the one from the other, or whether they had invariably produced the one the

other. We may, lastly, consult upon this question the common opinion of mankind—common sense. I will address myself first to common sense.

When a great change is accomplished in the state of a country, when there is operated in it a large development of wealth and power, a revolution in the distribution of the social means, this new fact encounters adversaries, undergoes opposition: this is inevitable. What is the general cry of the adversaries of the change? They say that this progress of the social state does not ameliorate, does not regenerate in like manner, in a like degree, the moral, the internal state of man; that it is a false, delusive progress, the result of which is detrimental to morality, to man. The friends of social development energetically repel this attack; they maintain, on the contrary, that the progress of society necessarily involves and carries with it the progress of morality; that when the external life is better regulated, the internal life is refined and purified. Thus stands the question between the adversaries and partisans of the new state.

Reverse the hypothesis: suppose the moral development in progress: what do the laborers in this progress generally promise? What, in the origin of societies, have promised the religious rulers, the sages, the poets, who have labored to soften and to regulate men's manners? They have promised the amelioration of the social condition, the more equitable distribution of the social means. What, then, I ask you, is involved in these disputes, these promises? What do they mean? What do they imply?

They imply that in the spontaneous, instinctive conviction of mankind, the two elements of civilization, the social development and the moral development, are closely connected together; that at sight of the one, man at once looks forward to the other. It is to this natural instinctive conviction that those who are maintaining or combating one or other of the two developments address themselves, when they affirm or deny their union. It is well understood, that if we can persuade mankind that the amelioration of the social state will be averse to the internal progress of individuals, we shall have succeeded in decrying and enfeebling the revolution in operation throughout society. On the other hand, when we promise mankind the amelioration of society by means of the amelioration of the individual, it is well understood that the tendency is to place faith in these promises, and it is accordingly made use of with success. It is evidently, therefore, the instinctive belief of humanity, that the movements of civilization are connected the one with the other, and reciprocally produce the one the other.

If we address ourselves to the history of the world, we shall

receive the same answer. We shall find that all the great developments of the internal man have turned to the profit of society; all the great developments of the social state to the profit of individual man. We find the one or other of the two facts predominating, manifesting itself with striking effect, and impressing upon the movement in progress a distinctive character. It is, sometimes, only after a very long interval of time, after a thousand obstacles, a thousand transformations, that the second fact, developing itself, comes to complete the civilization which the first had commenced. But if you examine them closely, you will soon perceive the bond which unites them. The march of Providence is not restricted to narrow limits; it is not bound, and it does not trouble itself to follow out to-day the consequences of the principle which it laid down yesterday. The consequences will come in due course, when the hour for them has arrived, perhaps not till hundreds of years have passed away; though its reasoning may appear to us slow, its logic is none the less true and sound. To Providence, time is as nothing; it strides through time as the gods of Homer through space; it makes but one step, and ages have vanished behind it. How many centuries, what infinite events passed away before the regeneration of the moral man by Christianity exercised upon the regeneration of the social state its great and legitimate influence. Yet who will deny that it any the less succeeded?

If from history we extend our inquiries to the nature itself of the two facts which constitute civilization, we are infallibly led to the same result. There is no one who has not experienced this in his own case. When a moral change is operated in man, when he acquires an idea, or a virtue, or a faculty, more than he had before—in a word, when he develops himself individually, what is the desire, what the want, which at the same moment takes possession of him? It is the desire, the want, to communicate the new sentiment to the world about him, to give realization to his thoughts externally. As soon as a man acquires anything, as soon as his being takes in his own conviction a new development, assumes an additional value, forthwith he attaches to this new development, this fresh value, the idea of possession; he feels himself impelled, compelled by his instinct, by an inward voice, to extend to others the change, the amelioration, which has been accomplished in his own person. We owe the great reformers solely to this cause; the mighty men who have changed the face of the world, after having changed themselves, were urged onward, were guided on their course, by no other want than this. So much for the alteration which is operated in the internal man; now to the other. A revolution is accomplished

in the state of society; it is better regulated, rights and property are more equitably distributed among its members—that is to say, the aspect of the world becomes purer and more beautiful, the action of government, the conduct of men in their mutual relations, more just, more benevolent. Do you suppose that this improved aspect of the world, this amelioration of external facts, does not react upon the interior of man, upon humanity? All that is said as to the authority of examples, of customs, of noble models, is founded upon this only: that an external fact, good, well regulated, leads sooner or later, more or less completely, to an internal fact of the same nature, the same merit; that a world better regulated, a world more just, renders man himself more just; that the inward is reformed by the outward, as the outward by the inward; that the two elements of civilization are closely connected the one with the other; that centuries, that obstacles of all sorts, may interpose between them; that it is possible they may have to undergo a thousand reformations in order to regain each other; but sooner or later they will rejoin each other: this is the law of their nature, the general fact of history, the instinctive faith of the human race.

I think I have thus—not exhausted the subject, very far from it—but, exhibited in a well-nigh complete, though cursory manner, the fact of civilization; I think I have described it, settled its limits, and stated the principal, the fundamental questions* to which it gives rise. I might stop here; but I cannot help touching upon a question which meets me at this point; one of those questions which are not historical questions, properly so called; which are questions, I will not call them hypothetical, but conjectural; questions of which man holds but one end, the other end being permanently beyond his reach; questions of which he cannot make the circuit, nor view on more than one side; and yet questions not the less real, not the less calling upon him for thought; for they present themselves before him, despite of himself, at every moment.

Of those two developments of which we have spoken, and which constitute the fact of civilization, the development of society on the one hand and of humanity on the other, which is the end, which is the means? Is it to perfect this social condition, to ameliorate his existence on earth, that man develops himself, his faculties, sentiments, ideas, his whole being?—or rather, is not the amelioration of the social condition, the progress of society, society itself, the theatre, the occasion, the *mobile*, of the development of the individual, in a word, is society made to serve the individual, or the individual to serve society? On the answer to this question inevitably depends

that whether the destiny of man is purely social; whether society drains up and exhausts the whole man; or whether he bears within him something intrinsic—something superior to his existence on earth.

A man, whom I am proud to call my friend, a man who has passed through meetings like our own to assume the first place in the assemblies less peaceable and more powerful: a man, all whose words are engraven on the hearts of those who hear them, M. Royer-Collard, has solved this question according to his own conviction, at least, in his speech on the Sacrilege Bill. I find in that speech these two sentences: "Human societies are born, live and die, on the earth; it is there their destinies are accomplished. . . . But they contain not the whole man. After he has engaged himself to society, there remains to him the noblest part of himself, those high faculties by which he elevates himself to God, to a future life, to unknown felicity in an invisible world. . . . We, persons individual and identical, veritable beings endowed with immortality, we have a different destiny from that of states."*

I will add nothing to this; I will not undertake to treat the question itself; I content myself with stating it. It is met with at the history of civilization: when the history of civilization is completed, when there is nothing more to say as to our present existence, man inevitably asks himself whether all is exhausted, whether he has reached the end of all things? This then is the last, the highest of all those problems to which history of civilization can lead. It is sufficient for me to have indicated its position and its grandeur.

From all I have said it is evident that the history of civilization might be treated in two methods, drawn from two sources, considered under two different aspects. The historian might place himself in the heart of the human mind for a given period, a series of ages, or among the determinate people; he might study, describe, relate all the events, all the transformations, all the revolutions which had been accomplished in the internal man; and when he should arrive at the end he would have a history of civilization among the people, and in the period he had selected. He may proceed in another manner; instead of penetrating the internal man, he may take his stand—he may place himself in the midst of the world; instead of describing the vicissitudes of the ideas, the sentiments of the individual being, he may describe external facts, the events, the changes of the social state. These two portions, these two histories of civilization are closely connected with each other; they are the reflection, the image of each other. Yet, they may be sep-

* "Opinion de M. Royer-Collard sur le Projet de Loi relatif au Sacrilege," pp. 7, 17.

arated; perhaps, indeed, they ought to be so, at least at the onset, in order that both the one and the other may be treated of in detail, and with perspicuity. For my part I do not propose to study with you the history of civilization in the interior of the human soul; it is the history of external events of the visible and social world that I shall occupy myself with. I had wished, indeed, to exhibit to you the whole fact of civilization, such as I can conceive it in all its complexity and extent, to set forth before you all the high questions which may arise from it. At present I restrict myself; mark out my field of inquiry within narrower limits; it is only the history of the social state that I purpose investigating.

We shall begin by seeking all the elements of European civilization in its cradle at the fall of the Roman Empire; we will study with attention society, such as it was, in the midst of those famous ruins. We will endeavor, not to resuscitate, but to place its elements side by side, and when we have done so, we will endeavor to make them move and follow them in their developments through the fifteen centuries which have elapsed since that epoch.

I believe that when we have got but a very little way into this study, we shall acquire the conviction that civilization is as yet very young; that the world has by no means as yet measured the whole of its career. Assuredly human thought is at this time very far from being all that it is capable of becoming; we are very far from comprehending the whole future of humanity: let each of us descend into his own mind, let him interrogate himself as to the utmost possible good he has formed a conception of and hopes for; let him then compare his idea with what actually exists in the world; he will be convinced that society and civilization are very young; that notwithstanding the length of the road they have come, they have incomparably further to go. This will lessen nothing of the pleasure that we shall take in the contemplation of our actual condition.

As I endeavor to place before you the great crises in the history of civilization in Europe during the last fifteen centuries, you will see to what a degree, even up in our own days, the condition of man has been laborious, stormy, not only in the outward and social state, but inwardly in the life of the soul. During all those ages, the human mind has had to suffer as much as the human race; you will see that in modern times, for the first time, perhaps, the human mind has attained a state, as yet very imperfect, but still a state in which reigns some peace, some harmony. It is the same with society; it has evidently made immense progress, the human condition is easy and just, compared with what it was previously; we may almost

when thinking of our ancestors apply to ourselves the verses of Lucretius :

" *Suave mari magno, turbantibus æquora ventis,
E terrâ magnum alterius spectare laborem.*" *

We may say of ourselves, without too much pride, as Sthenelus in Homer:—

"*Ἡμεῖς τοὶ τ' ἁπλοῦν μὲν' ἀμείνονες εὐχόμεθ' εἶναι.*" †

Let us be careful, however, not to give ourselves up too much to the idea of our happiness and amelioration, or we may fall into two grave dangers, pride and indolence; we may conceive an over-confidence in the power and success of the human mind, in our own enlightenment, and, at the same time, suffer ourselves to become enervated by the luxurious ease of our condition. It appears to me that we are constantly fluctuating between a tendency to complain upon light grounds, on the one hand, and to be content without reason, on the other. We have a susceptibility of spirit, a craving, an unlimited ambition in the thought, in our desire, in the movement of the imagination; but when it comes to the practical work of life, when we are called upon to give ourselves any trouble, to make any sacrifices, to use any efforts to attain the object, our arms fall down listlessly by our sides, and we give the matter up in despair, with a facility equalled only by the impatience with which we had previously desired its attainment. We must beware how we allow ourselves to yield to either of these defects. Let us accustom ourselves duly to estimate beforehand the extent of our force, our capacity, our knowledge; and let us aim at nothing which we feel we cannot attain legitimately, justly, regularly, and with unfailing regard to the principles upon which our civilization itself rests. We seem at times tempted to adopt the principles which, as a general rule, we assail and hold up to scorn—the principles, the right of the strongest of barbarian Europe; the brute force, the violence, the downright lying which were matters of course, of daily occurrence, four or five hundred years ago. But when we yield for a moment to this desire, we find in ourselves neither the perseverance nor the savage energy of the men of that period, who, suffering greatly from their condition, were naturally anxious, and incessantly essaying, to emancipate themselves from it. We, of the present day, are content with our condition; let us not expose it to danger by indulging in vague

* " 'Tis pleasant, in a great storm, to contemplate, from a safe position on shore, the perils of some ships tossed about by the furious winds and the stormy ocean."

† "Thank Heaven, we are infinitely better than those who went before us."

desires, the time for realizing which has not come. Much has been given to us, much will be required of us; we must render to posterity a strict account of our conduct; the public, the government, all are now subjected to discussion, examination, responsibility. Let us attach ourselves firmly, faithfully, undeviatingly, to the principles of our civilization—justice, legality, publicity, liberty; and let us never forget, that while we ourselves require, and with reason, that all things shall be open to our inspection and inquiry, we ourselves are under the eye of the world, and shall, in our turn, be discussed, be judged.

SECOND LECTURE.

IN meditating the plan of the course with which I propose to present you, I am fearful lest my lectures should possess the double inconvenience of being very long, by reason of the necessity of condensing much matter into little space, and, at the same time, of being too concise.

I dread yet another difficulty, originating in the same cause; the necessity, namely, of sometimes making affirmations without proving them. This is also the result of the narrow space to which I find myself confined. There will occur ideas and assertions of which the confirmation must be postponed. I hope you will pardon me for sometimes placing you under the necessity of believing me upon my bare word. I come even now to an occasion of imposing upon you this necessity.

I have endeavored, in the preceding lecture, to explain the fact of civilization in general, without speaking of any particular civilization, without regarding circumstances of time and place, considering the fact in itself, and under a purely philosophical point of view. I come to-day to the history of European civilization; but before entering upon the narrative itself, I wish to make you acquainted, in a general manner, with the particular physiognomy of this civilization; I desire to characterize it so clearly to you, that it may appear to you perfectly distinct from all other civilizations which have developed themselves in the world. This I am going to attempt, more than which I dare not say; but I can only affirm it, unless I could succeed in depicting European society with such faithfulness that you should instantly recognize it as a portrait. But of this I dare not flatter myself.

When we regard the civilizations which have preceded that of modern Europe, whether in Asia or elsewhere, including even Greek and Roman civilization, it is impossible to help being struck with the unity which pervades them. They seem to have emanated from a single fact, from a single idea; one might say that society has attached itself to a solitary dominant principle, which has determined its institutions, its customs, its creeds, in one word, all its developments.

In Egypt, for instance, it was the theocratic principle which pervaded the entire community; it reproduced itself in the

customs, in the monuments, and in all that remains to us of Egyptian civilization. In India, you will discover the same fact; there is still the almost exclusive dominion of the theocratic principle. Elsewhere you will meet with another organizing principle—the domination of a victorious caste; the principle of force will here alone possess society, imposing thereupon its laws and its character. Elsewhere society will be the expression of the democratic principle; it has been thus with the commercial republics which have covered the coasts of Asia Minor and of Syria, in Ionia, in Phenicia. In short, when we contemplate ancient civilizations, we find them stamped with a singular character of unity in their institutions, their ideas and their manners; a sole, or at least, a strongly preponderating force governs and determines all.

I do not mean to say this unity of principle and form in the civilization of these states has always prevailed therein. When we go back to their earlier history, we find that the various powers which may develop themselves in the heart of a society, have often contended for empire. Among the Egyptians, the Etruscans, the Greeks themselves, etc., the order of warriors, for example, has struggled against that of the priests; elsewhere, the spirit of clanship has struggled against that of free association; the aristocratic against the popular system, etc. But it has generally been in ante-historical times that such struggles have occurred; and thus only a vague recollection has remained of them.

The struggle has sometimes reproduced itself in the course of the existence of nations; but, almost invariably, it has soon been terminated; one of the powers that disputed for empire has soon gained it, and taken sole possession of the society. The war has always terminated by the, if not exclusive, at least largely preponderating, domination of some particular principle. The co-existence and the combat of different principles have never, in the history of these peoples, been more than a transitory crisis, and accident.

The result of this has been a remarkable simplicity in the majority of ancient civilizations. This simplicity has produced different consequences. Sometimes, as in Greece, the simplicity of the social principle has led to a wonderfully rapid development; never has any people unfolded itself in so short a period with such brilliant effect. But after this astonishing flight, Greece seemed suddenly exhausted; its decay, if it was not so rapid as its rise, was nevertheless strangely prompt. It seems that the creative force of the principle of Greek civilization was exhausted; no other has come to renew it.

Elsewhere, in Egypt and in India, for instance, the unity of the principle of civilization has had a different effect; society has

fallen into a stationary condition. Simplicity has brought monotony; the country has not been destroyed, society has continued to exist, but motionless, and as if frozen.

It is to the same cause that we must attribute the character of tyranny which appeared in the name of principle and under the most various forms, among all the ancient civilizations. Society belonged to an exclusive power, which would allow of the existence of none other. Every differing tendency was proscribed and hunted down. Never has the ruling principle chosen to admit beside it the manifestation and action of a different principle.

This character of unity of civilization is equally stamped upon literature and the works of the mind. Who is unacquainted with the monuments of Indian literature, which have lately been distributed over Europe? It is impossible not to see that they are all cast in the same mold; they seem all to be the result of the same fact, the expression of the same idea; works of religion or morals, historical traditions, dramatic and epic poetry, everywhere the same character is stamped; the productions of the mind bear the same character of simplicity and of monotony which appears in events and institutions. Even in Greece, in the centre of all the riches of the human intellect, a singular uniformity reigns in literature and in the arts.

It has been wholly otherwise with the civilization of modern Europe. Without entering into details, look upon it, gather together your recollections; it will immediately appear to you varied, confused, stormy; all forms, all principles of social organization co-exist therein; powers spiritual and temporal; elements theocratic, monarchical, aristocratic, democratic; all orders, all social arrangements mingle and press upon one another; there are infinite degrees of liberty, wealth, and influence. These various forces are in a state of continual struggle among themselves, yet no one succeeds in stifling the others, and taking possession of society. In ancient times, at every great epoch, all societies seemed cast in the same mold; it is sometimes pure monarchy, sometimes theocracy or democracy, that prevails; but each, in its turn, prevails completely. Modern Europe presents us with examples of all systems, of all experiments of social organization; pure or mixed monarchies, theocracies, republics, more or less aristocratic, have thus thrived simultaneously, one beside the other; and, notwithstanding their diversity, they have all a certain resemblance, a certain family likeness, which it is impossible to mistake.

In the ideas and sentiments of Europe there is the same variety, the same struggle. The theocratic, monarchic, aristocratic, and popular creeds, cross, combat, limit, and modify each other. Open the boldest writings of the middle ages; never

there is an idea followed out to its last consequences. The partisans of absolute power recoil suddenly and unconsciously before the results of their own doctrine; they perceive around them ideas and influences which arrest them, and prevent them from going to extremities. The democrats obey the same law. On neither part exists that imperturbable audacity, that blind determination of logic, which show themselves in ancient civilizations. The sentiments offer the same contrasts, the same variety; an energetic love of independence, side by side with a great facility of submission; a singular faithfulness of man to man, and, at the same time, an uncontrollable wish to exert free will, to shake off every yoke, and to live for one's self, without caring for any other. The souls of men are as different, as agitated, as society.

The same character discovers itself in modern literature. We cannot but agree that, as regards artistic form and beauty, they are very much inferior to ancient literature; but, as regards depth of sentiment and of ideas, they are far more rich and vigorous. We see that the human soul has been moved upon a greater number of points, and to a greater depth. Imperfection of form results from this very cause. The richer and more numerous the materials, the more difficult it is to reduce them to a pure and simple form. That which constitutes the beauty of a composition, of that which we call form in works of art, is clearness, simplicity, and a symbolic unity of workmanship. With the prodigious diversity of the ideas and sentiments of European civilization, it has been much more difficult to arrive at this simplicity, this clearness.

On all sides then this predominant character of modern civilization discovers itself. It has no doubt had this disadvantage, that, when we consider separately such or such a particular development of the human mind in letters, in the arts, in all directions in which it can advance, we usually find it inferior to the corresponding development in ancient civilizations; but, on the other hand, when we regard it in the aggregate, European civilization shows itself incomparably richer than any other; it has displayed at one and the same time many more different developments. Consequently you find that it has existed fifteen centuries, and yet is still in a state of continuous progression; it has not advanced nearly so rapidly as the Greek civilization, but its progress has never ceased to grow. It catches a glimpse of the vast career which lies before it, and day after day it shoots forward more rapidly, because more and more of freedom attends its movements. While in other civilizations the exclusive, or at least the excessively preponderating dominion of a single principle, of a single form, has been the cause of tyranny, in modern Europe the diversity

of elements which constitute the social order, the impossibility under which they have been placed of excluding each other, have given birth to the freedom which prevails in the present day. Not having been able to exterminate each other, it has become necessary that various principles should exist together—that they should make between them a sort of compact. Each has agreed to undertake that portion of the development which may fall to its share; and while elsewhere the predominance of a principle produced tyranny, in Europe liberty has been the result of the variety of the elements of civilization and of the state of struggle in which they have constantly existed.

This constitutes a real and an immense superiority; and if we investigate yet further, if we penetrate beyond external facts into the nature of things, we shall discover that this superiority is legitimate, and acknowledged by reason as well as proclaimed by facts. Forgetting for a moment European civilization, let us turn our attention to the world in general, on the general course of terrestrial things. What character do we find? How goes the world? It moves precisely with this diversity and variety of elements, a prey to this constant struggle which we have remarked in European civilization. Evidently it has not been permitted to any single principle, to any particular organization, to any single idea, or to any special force, that it should possess itself of the world, molding it once for all, destroying all other influences to reign therein itself exclusively.

Various powers, principles and systems mingle, limit each other, and struggle without ceasing, in turn predominating or predominated over, never entirely conquered or conquering. A variety of forms, of ideas, and of principles, then, struggles, their efforts after a certain unity, a certain ideal which perhaps can never be attained, but to which the human race tends by freedom and work; these constitute the general condition of the world. European civilization is, therefore, the faithful image of the world: like the course of things in the world, it is neither narrow, exclusive, nor stationary. For the first time, I believe, the character of speciality has vanished from civilization; for the first time it is developed as variously, as richly, as laboriously, as the great drama of the universe.

European civilization has entered, if we may so speak, into the eternal truth, into the plan of Providence; it progresses according to the intentions of God. This is the rational account of its superiority.

I am desirous that this fundamental and distinguishing character of European civilization should continue present to your minds during the course of our labors. At present I can only make the affirmation: the development of facts must furnish

the proof. It will, nevertheless, you will agree, be a strong confirmation of my assertion, if we find, even in the cradle of our civilization, the causes and the elements of the character which I have just attributed to it: if, at the moment of its birth, at the moment of the fall of the Roman Empire, we recognize in the state of the world, in the facts that, from the earliest times, have concurred to form European civilization, the principle of this agitated but fruitful diversity which distinguishes it. I am about to attempt this investigation. I shall examine the condition of Europe at the fall of the Roman Empire, and seek to discover, from institutions, creeds, ideas, and sentiments, what were the elements bequeathed by the ancient to the modern world. If, in these elements, we shall already find impressed the character which I have just described, it will have acquired with you, from this time forth, a high degree of probability.

First of all, we must clearly represent to ourselves the nature of the Roman Empire, and how it was formed.

Rome was, in its origin, only a municipality, a corporation. The government of Rome was merely the aggregate of the institutions which were suited to a population confined within the walls of a city: these were municipal institutions, that is their distinguishing character.

This was not the case with Rome only. If we turn our attention to Italy, at this period, we find around Rome nothing but towns. That which was then called a people was simply a confederation of towns. The Latin people was a confederation of Latin towns. The Etruscans, the Samnites, the Sabines, the people of Græcia Magna, may all be described in the same terms.

There was, at this time, no country—that is to say, the country was wholly unlike that which at present exists; it was cultivated, as was necessary, but it was uninhabited. The proprietors of lands were the inhabitants of the towns. They went forth to superintend their country properties, and often took with them a certain number of slaves; but that which we at present call the country, that thin population—sometimes in isolated habitations, sometimes in villages—which everywhere covers the soil, was a fact almost unknown in ancient Italy.

When Rome extended itself, what did she do? Follow history, and you will see that she conquered or founded towns; it was against towns that she fought, with towns that she contracted alliances; it was also into towns that she sent colonies. The history of the conquest of the world by Rome is the history of the conquest and foundation of a great number of towns. In the East, the extension of Roman dominion does

not carry altogether this aspect: the population there was otherwise distributed than in the West—it was much less concentrated in towns. But as we have to do here with the European population, what occurred in the East is of little interest to us.

Confining ourselves to the West, we everywhere discover the fact to which I have directed your attention. In Gaul, in Spain, you meet with nothing but towns. At a distance from the towns, the territory is covered with marshes and forests. Examine the character of the Roman monuments, of the Roman roads. You have great roads, which reach from one city to another; the multiplicity of minor roads, which now cross the country in all directions, was then unknown; you have nothing resembling that countless number of villages, country seats and churches, which have been scattered over the country since the middle ages. Rome has left us nothing but immense monuments, stamped with the municipal character, and destined for a numerous population collected upon one spot. Under whatever point of view you consider the Roman world, you will find this almost exclusive preponderance of towns, and the social non-existence of the country.

This municipal character of the Roman world evidently rendered unity, the social bond of a great state, extremely difficult to establish and maintain. A municipality like Rome had been able to conquer the world, but it was much less easy to govern and organize it. Thus, when the work appeared completed, when all the West, and a great part of the East, had fallen under Roman dominion, you behold this prodigious number of cities, of little states, made for isolation and independence, disunite, detach themselves, and escape, so to speak, in all directions. This was one of the causes which rendered necessary the Empire, a form of government more concentrated, more capable of holding together elements so slightly coherent. The Empire endeavored to introduce unity and combination into this scattered society. It succeeded up to a certain point. It was between the reigns of Augustus and Diocletian that, at the same time that civil legislation developed itself, there became established the vast system of administrative despotism which spread over the Roman world a network of functionaries, hierarchically distributed, well linked together, both among themselves and with the imperial court, and solely applied to rendering effective in society the will of power, and in transferring to power the tributes and energies of society.

And not only did this system succeed in rallying and in holding together the elements of the Roman world, but the idea of despotism, of central power, penetrated minds with a singular

facility. We are astonished to behold rapidly prevailing throughout this ill-united assemblage of petty republics, this association of municipalities, a reverence for the imperial majesty alone, august and sacred. The necessity of establishing some bond between all these portions of the Roman world must have been very pressing, to insure so easy an access to the mind for the faith and almost the sentiments of despotism.

It was with these creeds, with this administrative organization, and with the military organization which was combined with it, that the Roman Empire struggled against the dissolution at work inwardly, and against the invasion of the barbarians from without. It struggled for a long time, in a continual state of decay, but always defending itself. At last a moment came in which dissolution prevailed; neither the skill of despotism nor the indifference of servitude sufficed to support this huge body. In the fourth century it everywhere disunited and dismembered itself; the barbarians entered on all sides; the provinces no longer resisted, no longer troubled themselves concerning the general destiny. At this time a singular idea suggested itself to some of the emperors; they desired to try whether hopes of general liberty, a confederation—a system analogous to that which, in the present day, we call representative government—would not better defend the unity of the Roman Empire than despotic administration. Here is a rescript of Honorius and Theodosius, the younger, addressed, in the year 418, to the prefect of Gaul, the only purpose of which was to attempt to establish in the south of Gaul a sort of representative government, and, with its aid, to maintain the unity of the Empire.

“Rescript of the emperors Honorius and Theodosius the younger, addressed, in the year 418, to the prefect of the Gauls, sitting in the town of Arles.

“Honorius and Theodosius, Augusti, to Agricola, prefect of the Gauls:

“Upon the satisfactory statement that your Magnificence has made to us, among other information palpably advantageous to the state, we decree the force of the law in perpetuity to the following ordinances, to which the inhabitants of our seven provinces will owe obedience, they being such that they themselves might have desired and demanded them. Seeing that persons in office, or special deputies from motives of public or private utility, not only from each of the provinces, but also from every town, often present themselves before your Magnificence, either to render accounts or to treat of things relative to the interest of proprietors, we have judged that it would be a seasonable and profitable thing that, from the date of the present year,

there should be annually, at a fixed time, an assemblage held in the metropolis—that is, in the town of Arles, for the inhabitants of the seven provinces. By this institution we have in view to provide equally for general and particular interests. In the first place, by the meeting of the most notable of the inhabitants in the illustrious presence of the prefect, if motives of public order have not called him elsewhere, the best possible information may be gained upon every subject under deliberation. Nothing of that which will have been treated of and decided upon, after a ripe consideration, will escape the knowledge of any of the provinces, and those who shall not have been present at the assembly will be bound to follow the same rules of justice and equity. Moreover, in ordaining that an annual assembly be held in the city of Constantine,* we believe that we are doing a thing not only advantageous to the public good, but also adapted to multiply social relations. Indeed, the city is so advantageously situated, strangers come there in such numbers, and it enjoys such an extensive commerce, that everything finds its way there which grows or is manufactured in other places. All admirable things that the rich East, perfumed Arabia, delicate Assyria, fertile Africa, beautiful Spain, valiant Gaul produce, abound in this place with such profusion, that whatever is esteemed magnificent in the various parts of the world seems there the produce of the soil. Besides, the junction of the Rhone with the Tuscan sea approximates and renders almost neighbors those countries which the first traverses, and the second bathes in its windings. Thus, since the entire earth places at the service of this city all that it has most worthy—since the peculiar productions of all countries are transported hither by land, by sea, and by the course of rivers, by help of sails, of oars, and of wagons—how can our Gaul do otherwise than behold a benefit in the command which we give to convoke a public assembly in a city, wherein are united, as it were, by the gift of God, all the enjoyments of life, and all the facilities of commerce?

“The illustrious prefect Petronius,† through a laudable and reasonable motive, formerly commanded that this custom should be observed; but as the practice thereof was interrupted by the confusion of the times, and by the reign of usurers, we have resolved to revive it in vigor by the authority of our wisdom. Thus, then, dear and beloved cousin Agricola, your illustrious Magnificence, conforming yourself to our present ordinance, and to the custom established by your predecessors, will cause to be observed throughout the provinces the following rules:

* Constantine the Great had a singular liking for the town of Arles. It was he who established there the seat of the Gaulish prefecture; he desired also that it should bear his name, but custom prevailed against his wish.

† Petronius was prefect of the Gauls between the years 402 and 408.

“ ‘ Let all persons who are honored with public functions, or who are proprietors of domains, and all judges of provinces, be informed that, each year, they are to assemble in council in the city of Arles, between the ides of August and those of September, the days of convocation and of sitting being determined at their pleasure.

“ ‘ Novem Populinia and the second Aquitaine, being the most distant provinces, should their judges be detained by indispensable occupations, may send deputies in their place, according to custom.

“ ‘ Those who shall neglect to appear at the place assigned and at the time appointed, shall pay a fine, which for the judges, shall be five pounds of gold, and three pounds for the members of the *curiæ** and other dignitaries.’

“ We propose, by this means, to confer great advantages and favor on the inhabitants of our provinces. We feel, also, assured of adding to the ornaments of the city of Arles, to the fidelity of which we are so much indebted, according to our brother and patrician.†

“ Given on the 15th of the calends of May; received at Arles on the 10th of the calends of June.”

The provinces and the towns refused the benefit; no one would nominate the deputies, no one would go to Arles. Centralization and unity were contrary to the primitive character of that society; the local and munificent spirit reappeared everywhere, and the impossibility of reconstituting a general society or country became evident. The towns confined themselves, each to its own walls and its own affairs, and the empire fell because none wished to be of the empire, because citizens desired to be only of their own city. Thus we again discover, at the fall of the Roman Empire, the same fact which we have detected in the cradle of Rome, namely, the predominance of the municipal form and spirit. The Roman world had returned to its first condition; towns had constituted it; it dissolved; and towns remained.

In the municipal system we see what ancient Roman civilization has bequeathed to modern Europe; that system was very irregular, much weakened and far inferior, no doubt, to what it had been in earlier times; but, nevertheless, the only real, the only constituted system which had outlived all the elements of the Roman world.

When I say *alone* I make a mistake. Another fact, another idea equally survived; the idea of the empire, the name of em-

* The municipal bodies of Roman towns were called *curiæ*, and the members of those bodies, who were very numerous, were called *curiales*.

† Constantine, the second husband of Placidia, whom Honorius had chosen for colleague in 421.

peror, the idea of imperial majesty, of an absolute and sacred power attached to the name of emperor. These are the elements which Rome has transmitted to European civilization; upon one hand, the municipal system, its habits, rules, precedents, the principle of freedom; on the other, a general and uniform civil legislation, the idea of absolute power, of sacred majesty, of the emperor, the principle of order and subjection.

But there was formed at the same time, in the heart of the Roman society, a society of a very different nature, founded upon totally different principles, animated by different sentiments, a society which was about to infuse into modern European society elements of a character wholly different; I speak of the *Christian Church*. I say the Christian church, and not Christianity. At the end of the fourth and at the beginning of the fifth century Christianity was no longer merely an individual belief, it was an institution; it was constituted; it had its government, a clergy, an hierarchy calculated for the different functions of the clergy, revenues, means of independent action, rallying points suited for a great society, provincial, national and general councils, and the custom of debating in common upon the affairs of the society. In a word, Christianity, at this epoch, was not only a religion, it was also a church.

Had it not been a church I cannot say what might have happened to it amid the fall of the Roman Empire. I confine myself to simply human considerations; I put aside every element which is foreign to the natural consequences of natural facts; had Christianity been, as in the earlier times, no more than a belief, a sentiment, an individual conviction, we may believe that it would have sunk amidst the dissolution of the empire and the invasion of the barbarians. In later times, in Asia and in all the north of Africa, it sunk under an invasion of the same nature, under the invasion of the Moslem barbarians; it sunk then, although it subsisted in the form of an institution, or constituted church. With much more reason might the same thing have happened at the moment of the fall of the Roman Empire. There existed, at that time, none of those means by which, in the present day, moral influences establish themselves or offer resistance, independently of institutions; none of those means whereby a pure truth, a pure idea obtains a great empire over minds, governs actions and determines events. Nothing of the kind existed in the fourth century to give a like authority to ideas and to personal sentiments. It is clear that a society strongly organized and strongly governed was indispensable to struggle against such a disaster, and to issue victorious from such a storm. I do not think that I say more than the truth in affirming that at the end of the fourth and the commencement of the fifth centuries it was the Christian church that saved Christianity; it was the

church with its institutions, its magistrates and its power, that vigorously resisted the internal dissolution of the empire and barbarism; that conquered the barbarians and became the bond, the medium and the principle of civilization between the Roman and barbarian worlds. It is, then, the condition of the church rather than that of religion, properly so called, that we must look to in order to discover what Christianity has, since then, added to modern civilization, and what new elements it has introduced therein. What was the Christian church at that period?

When we consider, always under a purely human point of view, the various revolutions which have accomplished themselves during the development of Christianity, from the time of its origin up to the fifth century; if, I repeat, we consider it simply as a community and not as a religious creed, we find that it passed through three essentially different states.

In the very earliest period, the Christian society presents itself as a simple association of a common creed and common sentiments; the first Christians united to enjoy together the same emotions, and the same religious convictions. We find among them no system of determinate doctrines, no rules, no discipline, no body of magistrates.

Of course, no society, however newly born, however weakly constituted it may be, exists without a moral power which animates and directs it. In the various Christian congregations there were men who preached, taught and morally governed the congregation, but there was no formal magistrate, no recognized discipline; a simple association caused by a community of creed and sentiments was the primitive condition of the Christian society.

In proportion as it advanced—and very speedily, since traces are visible in the earliest monuments—a body of doctrines, of rules, of discipline, and of magistrates, began to appear; one kind of magistrates were called *πρεσβυτεροι*, or *ancients*, who became the priests; another, *επισκοποι*, or inspectors, or superintendents, who became bishops; a third *διακονοι*, or deacons, who were charged with the care of the poor, and with the distribution of alms.

It is scarcely possible to determine what were the precise functions of these various magistrates; the line of demarcation was probably very vague and variable, but what is clear is that an establishment was organized. Still, a peculiar character prevails in this second period: the preponderance and rule belonged to the body of the faithful. It was the body of the faithful which prevailed, both as to the choice of functionaries, and as to the adoption of discipline, and even doctrine. The church government and the Christian people were not as yet separated. They did not exist apart from, and independently of, one another;

and the Christian people exercised the principal influence in the society.

In the third period all was different. A clergy existed who were distinct from the people; a body of priests who had their own riches, jurisdiction, and peculiar constitution; in a word, an entire government, which in itself was a complete society, a society provided with all the means of existence, independently of the society to which it had reference, and over which it extended its influence. Such was the third stage of the constitution of the Christian church; such was the form in which it appeared at the beginning of the fifth century. The government was not completely separated from the people; there has never been a parallel kind of government, and less in religious matters than in any others; but in the relations of the clergy to the faithful, the clergy ruled almost without control.

The Christian clergy had moreover another and very different source of influence. The bishops and the priests became the principal municipal magistrates. You have seen, that of the Roman Empire there remained, properly speaking, nothing but the municipal system. It had happened, from the vexations of despotism and the ruin of the towns, that the *curiales*, or members of the municipal bodies, had become discouraged and apathetic; on the contrary, the bishops, and the body of priests, full of life and zeal, offered themselves naturally for the superintendence and direction of all matters. We should be wrong to reproach them for this, to tax them with usurpation; it was all in the natural course of things; the clergy alone were morally strong and animated; they became everywhere powerful. Such is the law of the universe.

The marks of this revolution are visible in all the legislation of the emperors at this period. If you open the code, either of Theodosius or of Justinian, you will find numerous regulations which remit municipal affairs to the clergy and the bishops. Here are some of them:

“*Cod. Just. l. 1, tit. IV., de episcopali audientiâ. § 26.*—With respect to the yearly affairs of cities, whether they concern the ordinary revenues of the city, either from funds arising from the property of the city, or from private gifts or legacies, or from any other source; whether public works, or depots of provisions, or aqueducts, or the maintenance of baths, or ports, or the construction of walls or towers, or the repairing of bridges or roads, or trials in which the city may be engaged in reference to public or private interests, we ordain as follows: The very pious bishop and three notables chosen from among the first men of the city, shall meet together; they shall, each year, examine the works done; they shall take care that those who conduct them, or who have conducted them, shall regulate them, with precision, render

their accounts, and show that they have duly performed their engagements in the administration, whether of the public monuments, or of the sums appointed for provisions or baths, or of expenses in the maintenance of roads, aqueducts, or any other work.

"*Ibid.* § 30.—With regard to the guardianship of young persons of the first or second age, and of all those for whom the law appoints guardians, if their fortune does not exceed 500 *aurei*, we ordain that the nomination of the president of the province shall not be waited for, as this gives rise to great expenses, particularly if the said president do not reside in the city in which it is necessary to provide the guardianship. The nomination of guardians shall in such case be made by the magistrate of the city . . . in concert with the very pious bishop and other person or persons invested with public offices, if there be more than one.

"*Ibid.* I. 1, tit. LV., *de defensoribus*. § 8.—We desire that the defenders of the cities, being well instructed in the holy mysteries of the orthodox faith, be chosen and instituted by the venerable bishops, the priests, the notables, the proprietors, and the *curiales*. As regards their installation, it shall be referred to the glorious power of the pretorian prefect, in order that their authority may have infused into it more solidity and vigor from the letters of admission of his Magnificence."

I might cite a great number of other laws, and you would everywhere meet with the fact which I have mentioned; between the municipal system of the Romans, and that of the middle ages, the municipal-ecclesiastic system interposed; the preponderance of the clergy in the affairs of the city succeeded that of the ancient municipal magistrates, and preceded the organization of the modern municipal corporations.

You perceive what prodigious power was thus obtained by the Christian church, as well by its own constitution as by its influence upon the Christian people, and by the part which it took in civil affairs. Thus, from that epoch, it powerfully assisted in forming the character and furthering the development of modern civilization. Let us endeavor to sum up the elements which it from that time introduced into it.

And first of all there was an immense advantage in the presence of a moral influence, of a moral power, of a power which reposed solely upon convictions and upon moral creeds and sentiments, amidst the deluge of material power which at this time inundated society. Had the Christian church not existed, the whole world must have been abandoned to purely material force. The church alone exercised a moral power. It did more; it sustained, it spread abroad the idea of a rule, of a law superior to all human laws. It proposed for the salvation

of humanity the fundamental belief that there exists, above all human laws, a law which is denominated, according to periods and customs, sometimes reason, sometimes the divine law, but which, everywhere and always, is the same law under different names.

In short, with the church originated a great fact, the separation of spiritual and temporal power. This separation is the source of liberty of conscience; it is founded upon no other principle but that which is the foundation of the most perfect and extended freedom of conscience. The separation of temporal and spiritual power is based upon the idea that physical force has neither right nor influence over souls, over conviction, over truth. It flows from the distinction established between the world of thought and the world of action, between the world of internal and that of external facts. Thus this principle of liberty of conscience for which Europe has struggled so much, and suffered so much, this principle which prevailed so late, and often, in its progress, against the inclination of the clergy, was enunciated, under the name of the separation of temporal and spiritual power, in the very cradle of European civilization; and it was the Christian church which, from the necessity imposed by its situation of defending itself against barbarism, introduced and maintained it.

The presence, then, of a moral influence, the maintenance of a divine law, and the separation of the temporal and spiritual powers, are the three grand benefits which the Christian church in the fifth century conferred upon the European world.

Even at that time, however, all its influences were not equally salutary. Already, in the fifth century, there appeared in the church certain unwholesome principles, which have played a great part in the development of our civilization. Thus, at this period, there prevailed within it the separation of governors and the governed, the attempt to establish the independence of governors as regards the governed, to impose laws upon the governed, to possess their mind, their life, without the free consent of their reason and of their will. The church, moreover, endeavored to render the theocratic principle predominant in society, to usurp the temporal power, to reign exclusively. And when it could not succeed in obtaining temporal dominion, in inducing the prevalence of the theocratic principle, it allied itself with temporal princes, and, in order to share, supported their absolute power at the expense of the liberty of the people.

Such were the principles of civilization which Europe, in the fifth century, derived from the church and from the Empire. It was in this condition that the barbarians found the Roman world, and came to take possession of it. In order to fully understand all the elements which met and mixed in the cradle

of our civilization, it only remains for us to study the barbarians.

When I speak of the barbarians, you understand that we have nothing to do here with their history; narrative is not our present business. You know that at this period the conquerors of the Empire were nearly all of the same race; they were all Germans, except some Slavonic tribes, the Alani, for example. We know also that they were all in pretty nearly the same stage of civilization. Some difference, indeed, might have existed between them in this respect, according to the greater or less degree of connection which the different tribes had had with the Roman world. Thus, no doubt the Goths were more advanced, possessed milder manners than the Franks. But in considering matters under a general point of view, and in their results as regards ourselves, this original difference of civilization among the barbarous people is of no importance.

It is the general condition of society among the barbarians that we need to understand. But this is a subject with which, at the present day, it is very difficult to make ourselves acquainted. We obtain, without much difficulty, a comprehension of the Roman municipal system, of the Christian church; their influence has been continued up to our own days. We find traces of it in numerous institutions and actual facts; we have a thousand means of recognizing and explaining them. But the customs and social condition of the barbarians have completely perished. We are compelled to make them out either from the earliest historical monuments, or by an effort of the imagination.

There is a sentiment, a fact which, before all things, it is necessary that we should well understand in order to represent faithfully to one's self the barbaric character: the pleasure of individual independence; the pleasure of enjoying one's self with vigor and liberty, amidst the chances of the world and of life; the delights of activity without labor; the taste for an adventurous career, full of uncertainty, inequality and peril. Such was the predominating sentiment of the barbarous state, the moral want which put in motion these masses of human beings. In the present day, locked up as we are in so regular a society, it is difficult to realize this sentiment to one's self with all the power which it exercised over the barbarians of the fourth and fifth centuries. There is only one work which, in my opinion, contains this characteristic of barbarism stamped in all its energy—"The History of the Conquest of England by the Normans," of M. Thierry, the only book wherein the motives, tendencies and impulses which actuate men in a social condition, bordering on barbarism, are felt and reproduced with a really Homeric faithfulness. Nowhere else do we see so well the nature of a barbarian and of the life of a barbarian. Some-

thing of this sort is also found, though, in my opinion, in a much lower degree, with much less simplicity, much less truth, in Cooper's romances upon the savages of America. There is something in the life of the American savages, in the relations and the sentiments they bear with them in the middle of the woods, that recalls, up to a certain point, the manners of the ancient Germans. No doubt these pictures are somewhat idealized, somewhat poetic; the dark side of the barbaric manners and life is not presented to us in all its grossness. I speak not only of the evils induced by these manners upon the social state, but of the internal and individual condition of the barbarian himself. There was within this passionate want of personal independence something more gross and more material than one would be led to conceive from the work of M. Thierry; there was a degree of brutality and of apathy which is not always exactly conveyed by his recitals. Nevertheless, when we look to the bottom of the question, notwithstanding this alloy of brutality, of materialism, of dull, stupid selfishness, the love of independence is a noble and a moral sentiment, which draws its power from the moral nature of man; it is the pleasure of feeling one's self a man, the sentiment of personality, of human spontaneity, in its free development.

It was through the German barbarians that this sentiment was introduced into European civilization; it was unknown in the Roman world, unknown in the Christian church, and unknown in almost all the ancient civilizations. When you find liberty in ancient civilizations, it is political liberty, the liberty of the citizen: man strove not for his personal liberty, but for his liberty as a citizen: he belonged to an association, he was devoted to an association, he was ready to sacrifice himself to an association. It was the same with the Christian church: a sentiment of strong attachment to the Christian corporation, of devotion to its laws, and a lively desire to extend its empire; or rather, the religious sentiment induced a reaction of man upon himself, upon his soul, an internal effort to subdue his own liberty, and to submit himself to the will of his faith. But the sentiment of personal independence, a love of liberty displaying itself at all risks, without any other motive but that of satisfying itself; this sentiment, I repeat, was unknown to the Roman and to the Christian society. It was by the barbarians that it was brought in and deposited in the cradle of modern civilization, wherein it has played so conspicuous a part, has produced such worthy results, that it is impossible to help reckoning it as one of its fundamental elements.

There is a second fact, a second element of civilization, for which we are equally indebted to the barbarians: this is military clientship; the bond which established itself between individuals,

between warriors, and which, without destroying the liberty of each, without even in the beginning destroying, beyond a certain point, the equality which almost completely existed between them, nevertheless founded an hierarchial subordination, and gave birth to that aristocratical organization which afterward became feudalism. The foundation of this relation was the attachment of man to man, the fidelity of individual to individual, without external necessity, and without obligation based upon the general principles of society. In the ancient republics you see no man attached freely and especially to any other man; they were all attached to the city. Among the barbarians it was between individuals that the social bond was formed; first by the relation of the chief to his companion, when they lived in the condition of a band of wandering over Europe; and later, by the relation of suzerain to vassal. This second principle, which has played so great a part in the history of modern civilization, this devotion of man to man, came to us from the barbarians; it is from their manners that it has passed into ours.

I ask you, was I wrong in saying at the beginning that modern civilization, even in its cradle, had been as varied, as agitated and as confused as I have endeavored to describe it to you in the general picture I have given you of it? Is it not true that we have now discovered, at the fall of the Roman Empire, almost all the elements which unite in the progressive development of our civilization? We have found, at that time, three wholly different societies: the municipal society—the last remains of the Roman Empire, the Christian society, and the barbaric society. We find these societies very variously organized, founded upon totally different principles, inspiring men with wholly different sentiments; we find the craving after the most absolute independence side by side with the most complete submission; military patronage side by side with ecclesiastical dominion; the spiritual and temporal powers everywhere present; the canons of the church, the learned legislation of the Romans, the almost unwritten customs of the barbarians; everywhere the mixture, or rather the co-existence of the most diverse races, languages, social situations, manners, ideas and impressions. Herein I think we have a sufficient proof of the faithfulness of the general character under which I have endeavored to present our civilization to you.

No doubt this confusion, this diversity, this struggle, have cost us very dear; these have been the cause of the slow progress of Europe, of the storms and sufferings to which she has been a prey. Nevertheless, I do not think we need regret them. To people, as well as to individuals, the chance of the most complete and varied development, the chance of an almost unlimited progress in all directions, compensates of itself alone for all that it

may cost to obtain the right of casting for it. And all things considered, this state, so agitated, so toilsome, so violent, has availed much more than the simplicity with which other civilizations present themselves; the human race has gained thereby more than it has suffered.

We are now acquainted with the general features of the condition in which the fall of the Roman Empire left the world; we are acquainted with the different elements which were agitated and became mingled, in order to give birth to European civilization. Henceforth we shall see them advancing and acting under our eyes. In the next lecture I shall endeavor to show what they became, and what they effected in the epoch which we are accustomed to call the times of barbarism; that is to say, while the chaos of invasion yet existed.

THIRD LECTURE.

I HAVE placed before you the fundamental elements of European civilization, tracing them to its very cradle, at the moment of the fall of the Roman Empire. I have endeavored to give you a glimpse beforehand of their diversity, and their constant struggle, and to show you that no one of them succeeded in reigning over our society, or at least in reigning over it so completely as to enslave or expel the others. We have seen that this was the distinguishing character of European civilization. We now come to its history at its commencement, in the ages which it is customary to call the barbarous.

At the first glance we cast upon this epoch it is impossible not to be struck with a fact which seems to contradict what we have lately said. When you examine certain notions which are accredited concerning the antiquities of modern Europe, you will perceive that the various elements of our civilization, the monarchical, theocratical, aristocratical, and democratical principles, all pretend that European society originally belonged to them, and that they have only lost the sole dominion by the usurpation of contrary principles. Question all that has been written, all that has been said upon this subject, and you will see that all the systems whereby our beginnings are sought to be represented or explained maintain the exclusive predominance of one or other of the elements of European civilization.

Thus there is a school of feudal publicists, of whom the most celebrated is M. de Boulainvilliers, who pretend that, after the fall of the Roman Empire, it was the conquering nation, subsequently become the nobility, which possessed all powers and rights; that society was its domain; that kings and peoples have despoiled it of this domain; that aristocratic organization was the primitive and true form of Europe.

Beside this school you will find that of the monarchists, the Abbé Dubois, for instance, who maintain, on the contrary, that it was to royalty European society belonged. The German kings, say they, inherited all the rights of the Roman emperors; they had even been called in by the ancient nations; the Gauls among others; they alone ruled legitimately; all the acquisitions of the aristocracy were only encroachments upon monarchy.

A third party presents itself, that of the liberal publicists, republicans, democrats, or whatever you like to call them. Consult the Abbé de Mably; according to him, it is to the system of free institutions, to the association of free men, to the people properly so called, that the government of society devolved from the period of the fifth century: nobles and kings enriched themselves with the spoils of primitive freedom; it sunk beneath their attacks indeed, but it reigned before them.

And above all these monarchical, aristocratical and popular pretensions rises the theocratical pretension of the church, who affirms that in virtue of her very mission, of her divine title, society belonged to her; that she alone had the right to govern it; that she alone was the legitimate queen of the European world, won over by her labors to civilization and to truth.

See then the position in which we are placed! We fancied we had shown that no one of the elements of European civilization had exclusively ruled in the course of its history; that those elements had existed in a constant state of vicinity, of amalgamation, of combat, and of compromise; and yet, at our very first step, we meet with the directly contrary opinion, that, even in its cradle, in the bosom of barbaric Europe, it was such or such a one of their elements which alone possessed society. And it is not only in a single country, but in all the countries of Europe, that, beneath slightly different forms, at different periods, the various principles of our civilization have manifested these irreconcilable pretensions. The historical schools we have just characterized are to be met with everywhere.

This is an important fact—important not in itself, but because it reveals other facts which hold a conspicuous place in our history. From this simultaneous setting forth of the most opposite pretensions to the exclusive possession of power in the first age of modern Europe two remarkable facts become apparent. The first, the principle, the idea of political legitimacy; an idea which has played a great part in the course of European civilization. The second, the veritable and peculiar character of the condition of barbaric Europe, of that epoch with which we are at present especially concerned.

I shall endeavor to demonstrate these two facts, to deduce them successively from this combat of primitive pretensions which I have just described.

What do the various elements of European civilization, the theocratical, monarchical, aristocratical and popular elements pretend to, when they wish to appear the first who possessed society in Europe? Do they not thus pretend to have been alone legitimate? Political legitimacy is evidently a right founded upon antiquity, upon duration; priority in time is ap-

pealed to as the source of the right, as the proof of the legitimacy of power. And observe, I pray you, that this pretension is not peculiar to any one system, to any one element of our civilization; it extends to all. In modern times we are accustomed to consider the idea of legitimacy as existing in only one system, the monarchical. In this we are mistaken; it is discoverable in all. You have already seen that all the elements of our civilization have equally desired to appropriate it. If we enter into the subsequent history of Europe, we shall find the most different social forms and governments equally in possession of their character and legitimacy. The Italian and Swiss aristocracies and democracies, the republic of San Marino, as well as the greatest monarchies of Europe, have called themselves, and have been regarded as legitimate; the former, like the latter, have founded their pretensions to legitimacy upon the antiquity of their institutions and upon the historical priority and perpetuity of their system of government.

If you leave Europe and direct your attention to other times and other countries, you everywhere meet with this idea of political legitimacy; you find it attaching itself everywhere to some portion of the government, to some institution, form, or maxim. There has been no country and no time, in which there has not existed a certain portion of the social system, public powers; which has not attributed to itself, and in which has not been recognized this character of legitimacy, derived from antiquity and long duration.

What is this principle? what are its elements? how has it introduced itself into European civilization?

At the origin of all powers, I say of all without any distinction, we meet with physical force. I do not mean to state that force alone has founded them all, or that if, in their origin, they had not had other titles than that of force, they would have been established. Other titles are manifestly necessary; powers have become established in consequence of certain social expediences, of certain references to the state of society, manners, and opinions. But it is impossible to avoid perceiving that physical force has stained the origin of all the powers of the world, whatever may have been their character and form.

Yet none will have anything to say to this origin; all powers, whatever they may be, reject it; none will admit themselves the offspring of force. An unconquerable instinct warns governments that force does not found right, and that if force was their origin, their right could never be established. This, then, is the reason why, when we go back to early times, and there find the various systems and powers a prey to violence, all exclaim, "I was anterior to all this, I existed previously,

in virtue of other titles; society belonged to me before this state of violence and struggle in which you meet with me; I was legitimate, but others contested and seized my rights."

This fact alone proves that the idea of force is not the foundation of political legitimacy, but that it reposes upon a totally different basis. What, indeed, is done by all these systems in thus formally disavowing force? They themselves proclaim that there is another kind of legitimacy, the true foundation of all others, the legitimacy of reason, justice, and right; and this is the origin with which they desire to connect themselves. It is because they wish it not to be supposed that they are the offspring of force, that they pretend to be invested in the name of their antiquity with a different title. The first characteristic then, of political legitimacy, is to reject physical force as a source of power, and to connect it with a moral idea, with a moral force, with the idea of right, of justice, and of reason. This is the fundamental element from which the principle of political legitimacy has issued. It has issued thence by the help of antiquity and long duration. And in this manner:

After physical force has presided at the birth of all governments, of all societies, time progresses; it alters the works of force, it corrects them, corrects them by the very fact that a society endures, and is composed of men. Man carries within himself certain notions of order, justice and reason, a certain desire to induce their prevalence, to introduce them into the circumstances among which he lives; he labors unceasingly at this task; and if the social condition in which he is placed continues, he labors always with a certain effect. Man places reason, morality and legitimacy in the world in which he lives.

Independently of the work of man, by a law of Providence which it is impossible to mistake, a law analogous to that which regulates the material world, there is a certain measure of order, reason and justice, which is absolutely necessary to the duration of a society. From the single fact of its duration, we may conclude that a society is not wholly absurd, insensate and iniquitous; that it is not utterly deprived of that element of reason, truth and justice which alone gives life to societies. If, moreover, the society develops itself, if it becomes more vigorous and more powerful, if the social condition from day to day is accepted by a greater number of men, it is because it gathers by the action of time more reason, justice and right; because circumstances regulate themselves, step by step, according to true legitimacy.

Thus the idea of political legitimacy penetrates the world, and men's minds, from the world. It has for its foundation

and first origin, in a certain measure at least, moral legitimacy, justice, reason, and truth, and afterward the sanction of time, which gives cause for believing that reason has won entrance into facts, and that true legitimacy has been introduced into the external world. At the epoch which we are about to study, we shall find force and falsehood hovering over the cradle of royalty, of aristocracy, of democracy, and of the church herself; you will everywhere behold force and falsehood reforming themselves, little by little, under the hand of time, right and truth taking their places in civilization. It is this introduction of right and truth into the social state, which has developed, step by step, the idea of political legitimacy; it is thus that it has been established in modern civilization.

When, therefore, attempts have at different times been made to raise this idea as the banner of absolute power, it has been perverted from its true origin. So far is it from being the banner of absolute power, that it is only in the name of right and justice that it has penetrated and taken root in the world. It is not exclusive; it belongs to no one in particular, but springs up wherever right develops itself. Political legitimacy attaches itself to liberty as well as to power; to individual rights as well as to the forms according to which public functions are exercised. We shall meet with it, in our way, in the most contrary systems; in the feudal system, in the municipalities of Flanders and Germany, in the Italian republics, no less than in the monarchy. It is a character spread over the various elements of modern civilization, and which it is necessary to understand thoroughly on entering upon its history.

The second fact which clearly reveals itself in the simultaneous pretensions of which I spoke in the beginning, is the true character of the so-called barbarian epoch. All the elements of European civilization pretend at this time to have possessed Europe; it follows that neither of them predominated. When a social form predominates in the world, it is not so difficult to recognize it. On coming to the tenth century we shall recognize, without hesitation, the predominance of the feudal system; in the seventeenth century we shall not hesitate to affirm that the monarchical system prevails; if we look to the municipalities of Flanders, to the Italian republics, we shall immediately declare the empire of the democratic principle. When there is really any predominating principle in society, it is impossible to mistake it.

The dispute which has arisen between the various systems that have had a share in European civilization, upon the question, which predominated at its origin, proves, then, that they all co-existed, without any one of them prevailing generally

enough, or certainly enough to give to society its form and its name.

Such, then, is the character of the barbarian epoch; it was the chaos of all elements, the infancy of all systems, an universal turmoil, in which even strife was not permanent or systematic. By examining all the aspects of the social state at this period, I might show you that it is impossible anywhere to discover a single fact, or a single principle, which was anything like general or established. I shall confine myself to two essential points: the condition of individuals, and the condition of institutions. That will be enough to paint the entire society.

At this period we meet with four classes of persons.—1. The free men; that is to say, those who depended upon no superior, upon no patron, and who possessed their property and regulated their life in complete liberty, without any bond of obligation to any other man. 2. The *leudes*, *fideles*, *anstrustiones*, etc., bound at first by the relation of companion to chief, and afterward by that of vassal to suzerain, to another man, toward whom, on account of a grant of lands, or other gifts, they had contracted the obligation of service. 3. The freedman. 4. The slaves.

But were these various classes fixed? Did men, when once they were inclosed in their limits, remain there? Had the relations of the various classes anything of regularity and permanence? By no means. You constantly behold freemen who leave their position to place themselves in the service of some one, receiving from him some gift or other, and passing into the class of *leudes*; others you see who fall into the class of slaves. Elsewhere *leudes* are seen struggling to separate themselves from their patrons, to again become independent, to re-enter the class of freemen. Everywhere you behold a movement, a continual passage of one class into another; an uncertainty, a general instability in the relations of the classes; no man remaining in his position, no position remaining the same.

Landed properties were in the same condition. You know that these were distinguished as allodial, or wholly free, and beneficiary, or subject to certain obligations with regard to a superior: you know how an attempt has been made to establish, in this last class of properties, a precise and defined system; it has been said that the benefices were at first given for a certain determinate number of years, afterward for life, and that finally they became hereditary. A vain attempt! All these kinds of tenure existed without order and simultaneously; we meet, at the same moment, with benefices for a fixed time, for life, and heredity; the same lands, indeed, passed in a

few years through these different states. There was nothing more stable in the condition of lands than in that of individuals. On all sides was felt the laborious transition of the wandering to the sedentary life, of personal relations to the combined relations of men and properties, or to real relations. During this transition all is confused, local and disordered.

In the institutions we find the same instability, the same chaos. Three systems of institutions co-existed: royalty; aristocratic institutions, or the dependence of men and lands one upon another; and free institutions, that is to say, the assemblies of free men deliberating in common. Neither of these systems was in possession of society; neither of them prevailed over the others. Free institutions existed, but the men who should have taken part in the assemblies rarely attended them. The signorial jurisdiction was not more regularly exercised. Royalty, which is the simplest of institutions and the easiest to determine, had no fixed character; it was partly elective, partly hereditary. Sometimes the son succeeded the father; sometimes a selection was made from the family; sometimes it was a simple election of a distant relation, or of a stranger. In no system will you find anything fixed; all institutions, as well as all social situations, existed together, became confounded, and were continually changing.

In states the same fluctuation prevailed: they were erected and suppressed, united and divided; there were no boundaries, no governments, no distant people; but a general confusion of situations, principles, facts, races and languages; such was barbarous Europe.

Within what limits is this strange period bounded? Its origin is well marked, it begins with the fall of the Roman Empire. But when did it conclude? In order to answer this question, we must learn to what this condition of society is to be attributed, what were the causes of this barbarism.

I think I can perceive two principal causes; the one material, arising from without, in the course of events; the other moral, originating from within, from man himself.

The material cause was the continuation of the invasion. We must not fancy that the invasion of the barbarians ceased in the fifth century; we must not think that, because Rome was fallen, we shall immediately find the barbaric kingdoms founded upon its ruins, or that the movement was at an end. This movement lasted long after the fall of the empire; the proofs of this are manifest.

See the Frank kings, even of the first race, called continually to make war beyond the Rhine; Clotaire, Dagobert constantly engaged in expeditions into Germany, fighting against the Thuringians, Danes and Saxons, who occupied the right bank

of the Rhine. Wherefore? Because these nations wished to cross the river, to come and take their share of the spoils of the empire. When, about the same time, those great invasions of Italy by the Franks established in Gaul, and principally by the Eastern or Austrasian Franks? They attacked Switzerland; passed the Alps; entered Italy. Why? Because they were pressed, on the northeast, by new populations; their expeditions were not merely forays for pillage, they were matters of necessity; they were disturbed in their settlements, and went elsewhere to seek their fortune. A new Germanic nation appeared upon the stage, and founded in Italy the kingdom of Lombardy. In Gaul, the Frank dynasty changed; the Carolingians succeeded the Merovingians. It was now acknowledged that this change of dynasty was, to say the truth, a fresh invasion of Gaul by the Franks, a movement of nations which substituted the eastern for the western Franks. The change was completed; the second race now governed. Charlemagne commenced against the Saxons what the Merovingians had done against the Thuringians; he was incessantly engaged in war against the nations beyond the Rhine. Who urged these on? The Obotrites, the Wiltzes, the Sorabes, the Bohemians, the entire Slavonic race which pressed upon the Germanic, and from the sixth to the ninth century compelled it to advance toward the west. Everywhere to the northeast the movement of invasion continued and determined events.

In the south a movement of the same nature exhibited itself: the Moslem Arabs appeared. While the Germanic and Slavonic people pressed on along the Rhine and Danube, the Arabs begun their expeditions and conquests upon all the coasts of the Mediterranean.

The invasion of the Arabs had a peculiar character. The spirit of conquest and the spirit of proselytism were united. The invasion was to conquer a territory and disseminate a faith. There was a great difference between this movement and that of the Germans. In the Christian world, the spiritual and temporal powers were distinct. The desire of propagating a creed and making a conquest did not co-exist in the same men.

The Germans, when they became converted, preserved their manners, sentiments and tastes; terrestrial passions and interests continued to rule them; they became Christians, but not missionaries. The Arabs, on the contrary, were both conquerors and missionaries; the power of the sword and that of the word, with them, were in the same hands. At a later period, this character determined the unfortunate turn taken by Mussulman civilization; it is in the combination of the spiritual and temporal powers, in the confusion of moral and

material authority, that the tyranny which seems adherent in that civilization originated. This I conceive to be the cause of the stationary condition into which that civilization is everywhere fallen. But the fact did not make its appearance at first; on the contrary, it added prodigious force to the Arab invasion. Undertaken with moral passions and ideas, it immediately obtained a splendor and a greatness which was wanting to the German invasion; it exhibited far more energy and enthusiasm, and far differently influenced the minds of men.

Such was the state of Europe from the fifth to the ninth century; pressed on the south by the Mahometans, on the north by the Germans and the Slavonic tribes, it was scarcely possible that the reaction of this double invasion should do other than hold the interior of Europe in continual disorder. The populations were constantly being displaced, and forced one upon the other; nothing of a fixed character could be established; the wandering life recommenced on all sides. There was, no doubt, some difference in this respect in the different states: the chaos was greater in Germany than in the rest of Europe, Germany being the focus of the movement; France was more agitated than Italy. But in no place could society settle or regulate itself; barbarism continued on all sides from the same cause that had originated it.

So much for the material cause, that which arose from the course of events. I now come to the moral cause, which sprang from the internal condition of man, and which was no less powerful.

After all, whatever external events may be, it is man himself who makes the world; it is in proportion to the ideas, sentiments and dispositions, moral and intellectual, of man, that the world becomes regulated and progressive; it is upon the internal condition of man that the visible condition of society depends.

What is required to enable men to found a society with any thing of durability and regularity? It is evidently necessary that they should have a certain number of ideas sufficiently extended to suit that society, to apply to its wants, to its relations. It is necessary, moreover, that these ideas should be common to the greater number of the members of the society; finally, that they should exercise a certain empire over their wills and actions.

It is clear, that if men have no ideas extending beyond their own existence, if their intellectual horizon is confined to themselves, if they are abandoned to the tempest of their passions and their wills, if they have not among them a certain number of notions and sentiments in common around which to rally, it is clear, I say, that between them no society

is possible, and that each individual must be a principle of disturbance and dissolution to any association which he may enter.

Wherever individuality predominates almost exclusively, wherever man considers no one but himself, and his ideas do not extend beyond himself, and he obeys nothing but his own passions, society (I mean a society somewhat extended and permanent) becomes for him almost impossible. Such, however, was the moral condition of the conquerors of Europe, at the time upon which we are now occupied.

I remarked in my last lecture that we are indebted to the Germans for an energetic sentiment of individual liberty, of human individuality. But in a state of extreme barbarism and ignorance this sentiment becomes selfishness in all its brutality, and in all its insociability. From the fifth to the eighth century it was at this point among the Germans. They cared only for their own interests, their own passions, their own will: how could they be reconciled to a condition even approximating to the social? Attempts were made to prevail upon them to enter it; they attempted to do so themselves. But they immediately abandoned it by some act of carelessness, some burst of passion, some want of intelligence. Constantly did society attempt to form itself; constantly was it destroyed by the act of man, by the absence of the moral conditions under which alone it can exist.

Such were the two determining causes of the barbarous state. So long as these were prolonged, barbarism endured. Let us see how and when they at last terminated.

Europe labored to escape from this condition. It is in the nature of man, even when he has been plunged into such a condition by his own fault, not to desire to remain in it. However rude, however ignorant, however devoted to his own interests and to his own passions he may be, there is within him a voice and an instinct which tells him that he was made for better things, that he has other powers, another destiny. In the midst of disorder, the love of order and of progress pursues and harasses him. The need of justice, foresight, development, agitates him even under the yoke of the most brutal selfishness. He feels himself impelled to reform the material world, and society, and himself; and he labors to do this, though unaware of the nature of the want which urges him. The barbarians aspired after civilization, while totally incapable of it, nay more, detesting it from the instant that they became acquainted with its law.

There remained, moreover, considerable wrecks of the Roman civilization. The name of the Empire, the recollection of that great and glorious society, disturbed the memories of men,

particularly of the senators of towns, of bishops, priests, and all those who had their origin in the Roman world.

Among the barbarians themselves, or their barbaric ancestors, many had been witnesses of the grandeur of the Empire; they had served in its armies, they had conquered it. The image and name of Roman civilization had an imposing influence upon them, and they experienced the desire of imitating, of reproducing, of preserving something of it. This was another cause which urged them to quit the condition of barbarism I have described.

There was a third cause which suggests itself to every mind; I mean the Christian church. The church was a society regularly constituted, having its principles, its rules, and its discipline, and experiencing an ardent desire to extend its influence and conquer its conquerors. Among the Christians of this period, among the Christian clergy there were men who had thought upon all moral and political questions, who had decided opinions and energetic sentiments upon all subjects, and a vivid desire to propagate and give them empire. Never has any other society made such efforts to influence the surrounding world, and to stamp thereon its own likeness, as were made by the Christian church between the fifth and the tenth centuries. When we come to study its particular history, we shall see all that it has done. It attacked barbarism, as it were, at every point, in order to civilize by ruling over it.

Finally, there was a fourth cause of civilization, a cause which it is impossible fitly to appreciate, but which is not therefore the less real, and this is the appearance of great men. No one can say why a great man appears at a certain epoch, and what he adds to the development of the world; that is a secret of Providence: but the fact is not therefore less certain. There are men whom the spectacle of anarchy and social stagnation, strikes and revolts, who are intellectually shocked therewith as with a fact which ought not to exist, and are possessed with an unconquerable desire of changing it, a desire of giving some rule, somewhat of the general, regular and permanent to the world before them. A terrible and often tyrannical power, which commits a thousand crimes, a thousand errors, for human weakness attends it; a power, nevertheless, glorious and salutary, for it gives to humanity, and with the hand of man, a vigorous impulse forward, a mighty movement.

These different causes and forces led, between the fifth and ninth century, to various attempts at extricating European society from barbarism.

The first attempt, which, although but slightly effective, must not be overlooked, since it emanated from the barbarians

themselves, was the drawing up of the barbaric laws: between the sixth and eighth centuries the laws of almost all the barbarous people were written. Before this they had not been written; the barbarians had been governed simply by customs, until they established themselves upon the ruins of the Roman empire. We may reckon the laws of the Burgundians, of the Salian and Ripuarian Franks, of the Visigoths, of the Lombards, the Saxons, the Frisons, the Bavarians, the Alemanni, etc. Here was manifestly a beginning of civilization; an endeavor to bring society under general and regular principles. The success of this attempt could not be great; it was writing the laws of a society which no longer existed, the laws of the social state of the barbarians before their establishment upon the Roman territory, before they had exchanged the wandering for the sedentary life, the condition of nomad warriors for that of proprietors. We find, indeed, here and there, some articles concerning the lands which the barbarians had conquered, and concerning their relations with the ancient inhabitants of the country; but the foundation of the greater part of their laws is the ancient mode of life, the ancient German condition; they were inapplicable to the new society, and occupied only a trifling place in its development.

At the same time, another kind of an attempt was made in Italy and the south of Gaul. Roman society had not so completely perished there as elsewhere; a little more order and life remained in the cities. There civilization attempted to lift again its head. If, for example, we look to the kingdom of the Ostrogoths in Italy under Theodoric, we see even under the dominion of a barbarous king and nation the municipal system, taking breath, so to speak, and influencing the general course of events. Roman society had acted upon the Goths, and had to a certain degree impressed them with its likeness. The same fact is visible in the south of Gaul. It was at the commencement of the sixth century that a Visigoth king of Toulouse, Alaric, caused the Roman laws to be collected, and published a code for his Roman subjects under the name of the *Breviarium Aniani*.

In Spain it was another power—namely, that of the church, which tried to revive civilization. In place of the ancient German assemblies, the assemblies of warriors, it was the council of Toledo which prevailed in Spain; and although distinguished laymen attended this council, the bishops had dominion there. Look at the law of the Visigoths, you will see that it is not a barbarous law; it was evidently compiled by the philosophers of the time, the clergy. It abounds in general ideas, in theories, theories wholly foreign to barbarous manners. Thus, you know that the legislation of the barbarians

was a personal legislation—that is to say, that the same law applied only to men of the same race. The Roman law governed the Romans, the Frank law governed the Franks; each people had its law, although they were united under the same government and inhabited the same territory. This is what is called the system of personal legislation, in opposition to that of real legislation fixed upon the territory. Well, the legislation of the Visigoths was not personal, but fixed upon the territory. All the inhabitants of Spain, Visigoths and Romans, were subject to the same law. Continue your investigation, and you will find yet more evident traces of philosophy. Among the barbarians, men had, according to their relative situations, a determinate value; the barbarian, the Roman, the freeman, the vassal, etc., were not held at the same price, there was a tariff of their lives. The principle of the equal value of men in the eye of the law was established in the law of the Visigoths. Look to the system of procedure, and you find in place of the oath of *compurgatores*, or the judicial combat, the proof by witnesses, and a rational investigation of the matter in question, such as might be prosecuted in a civilized society. In short, the whole Visigoth law bears a wise, systematic and social character. We may perceive herein the work of the same clergy who prevailed in the councils of Toledo, and so powerfully influenced the government of the country.

In Spain, then, up to the great invasion of the Arabs, it was the theocratic principle which attempted the revival of civilization.

In France the same endeavor was the work of a different power; it came from the great men, above all from Charlemagne. Examine his reign under its various aspects; you will see that his predominating idea was the design of civilizing his people. First, let us consider his wars. He was constantly in the field, from the south to the northeast, from the Ebro to the Elbe or the Weser. Can you believe that these were mere wilful expeditions, arising simply from the desire of conquest? By no means. I do not mean to say that all that he did is to be fully explained, or that there existed much diplomacy or strategic skill in his plans; but he obeyed a great necessity—a strong desire of suppressing barbarism. He was engaged during the whole of his reign in arresting the double invasion—the Mussulman invasion on the south and the German and Sclavonic invasion on the north. This is the military character of the reign of Charlemagne; his expedition against the Saxons had no other origin and no other purpose.

If you turn from his wars to his internal government you will there meet with a fact of the same nature—the attempt to introduce order and unity into the administration of

all the countries which he possessed. I do not wish to employ the word *kingdom* nor the word *state*; for these expressions convey too regular a notion, and suggest ideas which are little in harmony with the society over which Charlemagne presided. But this is certain, that being master of an immense territory, he felt indignant at seeing all things incoherent, anarchical and rude, and desired to alter their hideous condition. First of all he wrought by means of his *missi dominici*, whom he despatched into the various parts of his territory, in order that they might observe circumstances and reform them, or give an account of them to him. He afterward worked by means of general assemblies, which he held with much more regularity than his predecessors had done. At these assemblies he caused all the most considerable persons of the territory to be present. They were not free assemblies, nor did they at all resemble the kind of deliberations with which we are acquainted; they were merely a means taken by Charlemagne of being well informed of facts, and of introducing some order and unity among his disorderly populations.

Under whatever point of view you consider the reign of Charlemagne, you will always find in it the same character, namely, warfare against the barbarous state, the spirit of civilization; this is what appears in his eagerness to establish schools, in his taste for learned men, in the favor with which he regarded ecclesiastical influence, and in all that he thought proper to do, whether as regarded the entire society or individual man.

An attempt of the same kind was made somewhat later in England by King Alfred.

Thus the different causes to which I have directed attention, as tending to put an end to barbarism, were in action in some part or other of Europe from the fifth to the ninth century.

None succeeded. Charlemagne was unable to found his great empire, and the system of government which he desired to establish therein. In Spain the church succeeded no better in establishing the theocratic principle. In Italy and in the south of Gaul, although Roman civilization often attempted to rise again, it was not till afterward, toward the end of the tenth century, that it really reacquired any vigor. Up to that time all efforts to terminate barbarism proved abortive; they supposed that men were more advanced than they truly were; they all desired, under various forms, a society more extended or more regular than was compatible with the distribution of power and the condition of men's minds. Nevertheless, they had not been wholly useless. At the beginning of the tenth century, neither the great empire of Charlemagne nor the glorious councils of Toledo were any longer spoken of; but

barbarism had not the less arrived at its extreme term—two great results had been obtained.

I. The movement of the invasions on the north and south had been arrested: after the dismemberment of the empire of Charlemagne the states established on the right bank of the Rhine opposed a powerful barrier to the tribes who continued to urge their way westward. The Normans prove this incontestably; up to this period, if we except the tribes which cast themselves upon England, the movement of maritime invasions had not been very considerable. It was during the ninth century that it became constant and general. And this was because invasions by land were become very difficult, society having, on this side, acquired more fixed and certain frontiers. That portion of the wandering population which could not be driven back was constrained to turn aside and carry on its roving life upon the sea. Whatever evils were done in the west by Norman expeditions, they were far less fatal than invasions by land; they disturbed dawning society far less generally.

In the south the same fact declared itself. The Arabs were quartered in Spain; warfare continued between them and the Christians, but it no longer entailed the displacement of the population. Saracenic bands still, from time to time, infested the coasts of the Mediterranean; but the grand progress of Islamism had evidently ceased.

II. At this period we see the wandering life ceasing, in its turn, throughout the interior of Europe; populations established themselves; property became fixed; and the relations of men no longer varied from day to day, at the will of violence or chance. The internal and moral condition of man himself began to change; his ideas and sentiments, like his life, acquired fixedness; he attached himself to the places which he inhabited, to the relations which he had contracted there, to those domains which he began to promise himself that he would bequeath to his children, to that dwelling which one day he will call his castle, to that miserable collection of colonists and slaves which will one day become a village. Everywhere little societies, little states, cut, so to speak, to the measure of the ideas and the wisdom of man, formed themselves. Between these societies was gradually introduced the bond, of which the customs of barbarism contained the germ, the bond of a confederation which did not annihilate individual independence. On the one hand, every considerable person established himself in his domains, along with his family and servitors; on the other hand, a certain hierarchy of services and rights became established between these warlike proprietors scattered over the land. What was this? The feudal

system rising definitively from the bosom of barbarism. Of the various elements of our civilization, it was natural that the Germanic element should first prevail; it had strength on its side, it had conquered Europe; from it Europe was to receive its earliest social form and organization. This is what happened. Feudalism, its character, and the part played by it in the history of European civilization, will be the subject-matter of my next lecture; and in the bosom of that victorious feudal system we shall meet at every step, with the other elements of our civilization—royalty, the church, municipal corporations; and we shall foresee without difficulty that they are not destined to sink beneath this feudal form, to which they become assimilated, while struggling against it, and while waiting the hour when victory shall visit them in their turn.

FOURTH LECTURE.

WE have studied the condition of Europe after the fall of the Roman Empire, in the first period of modern history, the barbarous. We have seen that, at the end of this epoch, and at the commencement of the tenth century, the first principle, the first system that developed itself and took possession of European society, was the feudal system; we have seen that feudalism was the first-born of barbarism. It is then the feudal system which must now be the object of our study.

I scarcely think it necessary to remind you that it is not the history of events, properly speaking, which we are considering. It is not my business to recount to you the destinies of feudalism. That which occupies us in the history of civilization; this is the general and hidden fact which we seek under all the external facts which envelop it.

Thus events, social crises, the various states through which society has passed, interest us only in their relations to the development of civilization; we inquire of them solely in what respects they have opposed or assisted it, what they have given to it, and what they have refused it. It is only under this point of view that we are to consider the feudal system.

In the commencement of these lectures we defined the nature of civilization; we attempted to investigate its elements; we saw that it consisted, on the one hand, in the development of man himself, of the individual, of humanity; on the other hand, in that of his external condition, in the development of society. Whenever we find ourselves in the presence of an event, of a system, or of a general condition of the world, we have this double question to ask of it, what has it done for or against the development of man, for or against the development of society?

You understand beforehand that, during our investigations, it is impossible that we should not meet upon our way most important questions of moral philosophy. When we desire to know in what an event or a system has contributed to the development of man and of society, it is absolutely needful that we should be acquainted with the nature of the true development of society and of man; that we should know what developments are false and illegitimate, perverting instead of ameliorating, causing a retrogressive instead of a progressive movement.

We shall not seek to escape from this necessity. Not only should we thereby mutilate and lower our ideas and the facts, but the actual state of the world imposes upon us the necessity of freely accepting this inevitable alliance of philosophy and history. This is precisely one of the characteristics, perhaps the essential characteristic of our epoch. We are called upon to consider, to cause to progress together, science and reality, theory and practice, right and fact. Up to our times, these two powers have existed separately; the world has been accustomed to behold science and practice following different roads, without recognizing each other, or at least without meeting. And when doctrines and general ideas have desired to amalgamate with events and influence the world they have only succeeded under the form and by means of the arm of fanaticism. The empire of human societies, and the direction of their affairs, have hitherto been shared between two kinds of influences; upon one hand, the believers, the men of general ideas and principles, the fanatics; on the other, men strangers to all rational principles, who govern themselves merely according to circumstances, practitioners, free-thinkers, as the seventeenth century called them. This condition of things is now ceasing; neither fanatics nor free-thinkers will any longer have dominion. In order now to govern and prevail with men, it is necessary to be acquainted with general ideas and circumstances; it is necessary to know how to value principles and facts, to respect virtue and necessity, to preserve one's self from the pride of fanatics, and the not less blind scorn of free-thinkers. To this point have we been conducted by the development of the human mind and the social state; upon one hand, the human mind, exalted and freed, better comprehends the connection of things, knows how to look around on all sides, and makes use of all things in its combinations; on the other hand, society has perfected itself to that degree that it can be compared with the truth; that facts can be brought into juxtaposition with principles, and yet, in spite of their still great imperfections, not inspire by the comparison invincible discouragement or distaste. I shall thus obey the natural tendency, convenience, and the necessity of our times, in constantly passing from the examination of circumstances to that of ideas, from an exposition of facts to a question of doctrines. Perhaps, even, there is in the actual disposition of men's minds another reason in favor of this method. For some time past a confirmed taste, I might say a sort of predilection, has manifested itself among us, for facts, for practical views, for the positive aspect of human affairs. We have been to such an extent a prey to the despotism of general ideas, of theories; they have, in some respects, cost us so dear that they are become the objects of a certain degree of distrust. We

like better to carry ourselves back to facts, to special circumstances, to applications. This is not to be regretted; it is a new progress, a great step in knowledge, and toward the empire of truth; provided always that we do not allow ourselves to be prejudiced and carried away by this disposition; that we do not forget that truth alone has a right to reign in the world; that facts have no value except as they tend to explain, and to assimilate themselves more and more to the truth; that all true greatness is of thought; and that all fruitfulness belongs to it. The civilization of our country has this peculiar character, that it has never wanted intellectual greatness; it has always been rich in ideas; the power of the human mind has always been great in French society; greater, perhaps, than in any other. We must not lose this high privilege; we must not fall into the somewhat subordinate and material state which characterizes other societies. Intelligence and doctrines must occupy in the France of the present day at least the place which they have occupied there hitherto.

We shall, then, by no means avoid general and philosophical questions; we shall not wander in search of them, but where facts lead us to them we shall meet them without hesitation or embarrassment. An occasion of doing so will more than once present itself during the consideration of the feudal system in its relations to the history of European civilization.

A good proof that in the tenth century the feudal system was necessary, was the only possible social state, is the universality of its establishment. Wherever barbarism ceased, everything took the feudal form. At the first moment, men saw in it only the triumph of chaos; all unity, all general civilization vanished; on all sides they beheld society dismembering itself; and, in its stead, they beheld a number of minor, obscure, isolated, and incoherent societies erect themselves. To contemporaries, this appeared the dissolution of all things, universal anarchy. Consult the poets and the chroniclers of the time; they all believed themselves at the end of the world. It was, nevertheless, the beginning of a new and real society, the feudal, so necessary, so inevitable, so truly the only possible consequence of the anterior state, that all things entered into it and assumed its form. Elements, the most foreign to this system, the church, municipalities, royalty, were compelled to accommodate themselves to it; the churches became suzerains and vassals, cities had lords and vassals, royalty disguised itself under the form of suzerainship. All things were given in fief, not only lands, but certain rights, the right, for instance, of felling in forests, and of fishing, the churches gave in fief their perquisites, from their revenues from baptisms, the churchings of women. Water and money

were given in fief. Just as all the general elements of society entered into the feudal frame, so the smallest details, and the most trifling facts of common life, became a part of feudalism.

In beholding the feudal form thus taking possession of all things, we are tempted to believe, at first, that the essential and vital principle of feudalism everywhere prevailed. But this is a mistake. In borrowing the feudal form, the elements and institutions of society which were not analogous to the feudal system, did not renounce their own nature or peculiar principles. The feudal church did not cease to be animated and governed, at bottom, by the theocratic principle; and it labored unceasingly, sometimes in concert with the royal power, sometimes with the pope, and sometimes with the people, to destroy this system, of which, so to speak, it wore the livery. It was the same with royalty and with the corporations; in the one the monarchical, in the other the democratical principle, continued, at bottom, to predominate. Notwithstanding their feudal livery, these various elements of European society constantly labored to deliver themselves from a form which was foreign to their true nature, and to assume that which corresponded to their peculiar and vital principle.

Having shown the universality of the feudal form, it becomes very necessary to be on our guard against concluding from this the universality of the feudal principle, and against studying feudalism indifferently, whenever we meet with its physiognomy. In order to know and comprehend this system thoroughly, to unravel and judge of its effects in reference to modern civilization, we must examine it where the form and principle are in harmony; we must study it in the hierarchy of lay possessors of fiefs, in the association of the conquerors of the European territory. There truly resided feudal society; thereupon we are now to enter.

I spoke just now of the importance of moral questions, and of the necessity of not avoiding them. But there is a totally opposite kind of considerations, which has generally been too much neglected; I mean the material condition of society, the material changes introduced into mankind's method of existing, by a new fact, by a revolution, by a new social state. We have not always sufficiently considered these things; we have not always sufficiently inquired into the modifications introduced by these great crises of the world, into the material existence of men, into the material aspect of their relations. These modifications have more influence upon the entire society than is supposed. Who does not know how much the influence of climates has been studied, and how much importance was attached to it by Montesquieu. If we regard the immediate influence of climate upon men, perhaps it is not so

extensive as has been supposed; it is, at all events, very vague and difficult to be appreciated. But the indirect influence of climate, that which, for example, results from the fact that, in a warm country men live in the open air, while in a cold country they shut themselves up in their houses; that in one case they nourish themselves in one manner, in the other in another. These are facts of great importance, facts which, by the simply difference of material life, act powerfully upon civilization. All great revolutions lead to modifications of this sort in the social state, and these are very necessary to be considered.

The establishment of the feudal system produced one of these modifications, of unmistakable importance; it altered the distribution of the population over the face of the land. Hitherto the masters of the soil, the sovereign population, had lived united in more or less numerous masses of men, whether sedentarily in cities, or wandering in bands through the country. In consequence of the feudal system, these same men lived isolated, each in his own habitation and at great distances from one another. You will immediately perceive how much influence this change was calculated to exercise upon the character and course of civilization. The social preponderance, the government of society, passed suddenly from the towns to the country; private property became of more importance than public property, private life than public life. Such was the first and purely material effect of the triumph of feudal society. The further we examine into it, the more will the consequence of this single fact be unfolded to our eyes.

Let us investigate this society in itself and see what part it has played in the history of civilization. First of all let us take feudalism in its most simple, primitive, and fundamental element; let us consider a single possessor of a fief in his domain, and let us see what will become of all those who form the little society around him.

He establishes himself upon an isolated and elevated spot, which he takes care to render safe and strong; there he constructs what he will call his castle. With whom does he establish himself? With his wife and children; perhaps some freemen, who have not become proprietors, attach themselves to his person, and continue to live with him, at his table. These are the inhabitants of the interior of the castle. Around and at his foot a little population of colonists and serfs gather together, who cultivate the domains of the possessor of the fief. In the center of this lower population religion plants a church; it brings hither a priest. In the early period of the feudal system this priest was commonly at the same time the chaplain of the castle and pastor of the village; by and by

these two characters separated; the village had its own pastor, who lived there beside his church. This, then, was the elementary feudal society, the feudal molecule, so to speak. It is this element that we have first of all to examine. We will demand of it the double question which should be asked of all our facts: What has resulted from it in favor of the development—(1) of man himself, (2) of society?

We are perfectly justified in addressing this double question to the little society which I have just described, and in placing faith in its replies; for it was the type and faithful image of the entire feudal society. The lord, the people on his domains, and the priest; such is feudalism upon the great as well as the small scale, when we have taken from it royalty and the towns, which are distinct and foreign elements.

The first fact that strikes us in contemplating this little society, is the prodigious importance which the possessor of the fief must have had, both in his own eyes, and in the eyes of those who surround him. The sentiment of personality, of individual liberty, predominated in the barbaric life. But here it was wholly different; it was no longer only the liberty of the man, of the warrior; it was the importance of the proprietor, of the head of the family, of the master, that came to be considered. From this situation an impression of immense superiority must have resulted; a superiority quite peculiar, and very different from everything that we meet with in the career of other civilizations. I will give the proof of this. I take in the ancient world some great aristocratical position, a Roman patrician, for instance: like the feudal lord, the Roman patrician was head of a family, master, superior. He was, moreover, the religious magistrate, the pontiff in the interior of his family. Now, his importance as a religious magistrate came to him from without; it was not a purely personal and individual importance; he received it from on high; he was the delegate of the Divinity; the interpreter of the religious creed. The Roman patrician was, besides, the member of a corporation which lived united on the same spot, a member of the senate; this again was an importance which came to him from without, from his corporation, a received, a borrowed importance. The greatness of the ancient aristocrats, associated as it was with a religious and political character, belonged to the situation, to the corporation in general, rather than to the individual. That of the possessor of the fief was purely individual; it was not derived from any one; all his rights, all his power, came to him from himself. He was not a religious magistrate; he took no part in the senate; it was in his person that all his importance resided; all that he was, he was of himself, and in his own name. What a mighty

influence must such a situation have exerted on its occupant! What individual haughtiness, what prodigious pride—let us say the word—what insolence, must have arisen in his soul! Above himself there was no superior of whom he was the representative or interpreter; there was no equal near him; no powerful and general law which weighed upon him; no external rule which influenced his will; he knew no curb but the limits of his strength and the presence of danger. Such was the necessary moral result of this situation upon the character of man.

I now proceed to a second consequence, mighty also, and too little noticed, namely, the particular turn taken by the feudal family spirit.

Let us cast a glance over the various family systems. Take first of all the patriarchal system of which the Bible and oriental records offer the model. The family was very numerous; it was a tribe. The chief, the patriarch, lived therein in common with his children, his near relations, the various generations which united themselves around him, all his kindred, all his servants; and not only did he live with them all, but he had the same interests, the same occupations, and he led the same life. Was not this the condition of Abraham, of the patriarchs, and of the chiefs of the Arab tribes, who still reproduce the image of the patriarchal life?

Another family system presents itself, namely, the *clan*, a petty society, whose type we must seek for in Scotland or Ireland. Through this system, very probably, a large portion of the European family has passed. This is no longer the patriarchal family. There is here a great difference between the situation of the chief and that of the rest of the population. They did not lead the same life: the greater portion tilled and served; the chief was idle and warlike. But they had a common origin; they all bore the same name; and their relations of kindred, ancient traditions, the same recollections, the same affections, established a moral tie, a sort of equality between all the members of the clan.

These are the two principal types of the family society presented by history. But have we here the feudal family? Obviously not. It seems, at first, that the feudal family bears some relation to the clan; but the difference is much greater than the resemblance. The population which surrounded the possessor of the fief were totally unconnected with him; they did not bear his name; between them and him there was no kindred, no bond, moral or historical. Neither did it resemble the patriarchal family. The possessor of the fief led not the same life, nor did he engage in the same occupations with those who surrounded him; he was an idler and a warrior,

while the others were laborers. The feudal family was not numerous; it was not a tribe; it reduced itself to the family, properly so called, namely, to the wife and children; it lived separated from the rest of the population, shut up in the castle. The colonists and serfs made no part of it; the origin of the members of this society was different, the inequality of their situation immense. Five or six individuals, in a situation at once superior to and estranged from the rest of the society, that was the feudal family. It was of course invested with a peculiar character. It was narrow, concentrated, and constantly called upon to defend itself against, to distrust, and, at least, to isolate itself from even its retainers. The interior life, domestic manners, were sure to become predominant in such a system. I am aware that the brutality of the passions of a chief, his habit of spending his time in warfare or the chase, were a great obstacle to the development of domestic manners. But this would be conquered; the chief necessarily returned home habitually; he always found there his wife and children, and these well nigh only; these would alone constitute his permanent society—they would alone share his interests, his destiny. Domestic life necessarily, therefore, acquired great sway. Proofs of this abound. Was it not within the bosom of the feudal family that the importance of women developed itself? In all the ancient societies, I do not speak of those where the family spirit did not exist, but of those wherein it was very powerful in the patriarchal life, for instance, women did not hold at all so considerable a place as they acquired in Europe under the feudal system. It was to the development and necessary preponderance of domestic manners in feudalism, that they chiefly owed this change, this progress in their condition. Some have desired to trace the cause to the peculiar manners of the ancient Germans; to a national aspect which, it is said, they bore toward women amid their forests. Upon a sentence of Tacitus, German patriotism has built I know not what superiority, what primitive and uneradicable purity of German manners, as regards the relations of the two sexes. Mere fancies! Phrases similar to that of Tacitus, concerning sentiments and usages analogous to those of the ancient Germans, are to be found in the recitals of a crowd of observers of savage or barbarous people. There is nothing primitive therein, nothing peculiar in any particular race. It was in the effects of a strongly marked social position, in the progress and preponderance of domestic manners, that the importance of women in Europe originated; and the preponderance of domestic manners became, very early, an essential characteristic of the feudal system.

A second fact, another proof of the empire of domestic life,

equally characterizes the feudal family: I mean the hereditary spirit, the spirit of perpetuation, which evidently predominated therein. The hereditary spirit is inherent in the family spirit; but nowhere has it so strongly developed itself as under the feudal system. This resulted from the nature of the property with which the family was incorporated. The fief was unlike other properties; it constantly demanded a possessor to defend it, serve it, acquit himself of the obligations inherent in the domain, and thus maintain it in its rank amid the general association of the masters of the soil. Thence resulted a sort of identification between the actual possessor of the fief and the fief itself, and all the series of its future possessors.

This circumstance greatly contributed to fortify and make closer the family ties already so powerful by the very nature of the feudal family.

I now issue from the seignorial dwelling, and descend amid the petty population that surrounds it. Here all things wear a different aspect. The nature of man is so good and fruitful that when a social situation endures for any length of time, a certain moral tie, sentiments of protection, benevolence and affection, inevitably establish themselves among those who are thus approximated to one another, whatever may be the conditions of approximation. It happened thus with feudalism. No doubt, after a certain time, some moral relations, some habits of affection, became contracted between the colonists and the possessor of the fief. But this happened in spite of their relative position, and not by reason of its influence. Considered in itself, the position was radically wrong. There was nothing morally in common between the possessor of the fief and the colonists; they constituted part of his domain; they were his property; and under this name, property, were included all the rights which, in the present day, are called rights of public sovereignty, as well as the rights of private property, the right of imposing laws, of taxing and punishing, as well as that of disposing of and selling. As far as it is possible that such should be the case where men are in presence of men, between the lord and the cultivators of his lands there existed no rights, no guarantees, no society.

Hence, I conceive, the truly prodigious and invincible hatred with which the people at all times have regarded the feudal system, its recollections, its very name. It is not a case without example for men to have submitted to oppressive despotisms, and to have become accustomed to them; nay, to have willingly accepted them. Theocratic and monarchical despotisms have more than once obtained the consent, almost the affections, of the population subjected to them. But feudal despotism has always been repulsive and odious; it has op-

pressed the destinies, but never reigned over the souls of men. The reason is, that in theocracy and monarchy, power is exercised in virtue of certain words which are common to the master and to the subject; it is the representative, the minister of another power superior to all human power; it speaks and acts in the name of the Divinity or of a general idea, and not in the name of man himself, of man alone. Feudal despotism was altogether different; it was the power of the individual over the individual; the dominion of the personal and capricious will of a man. This is, perhaps, the only tyranny of which, to his eternal honor, man will never willingly accept. Whenever, in his master, he beholds a mere man, from the moment that the will which oppresses him appears a merely human and individual will, like his own, he becomes indignant, and supports the yoke wrathfully. Such was the true and distinguishing character of feudal power; and such was also the origin of the antipathy which it has ever inspired.

The religious element which was associated with it was little calculated to ease the burden. I do not conceive that the influence of the priest, in the little society which I have just described, was very great, nor that he succeeded much in legitimating the relations of the inferior population with the lord. The church has exerted a very great influence upon European civilization, but this it has done by proceedings of a general character, by changing, for instance, the general dispositions of men. When we enter closely into the petty feudal society, properly so called, we find that the influence of the priest, between the colonists and the lord, scarcely amounted to anything. Most frequently he was himself rude and subordinate as a serf, and very little in condition or disposition to combat the arrogance of the lord. No doubt, called, as he was, to sustain and develop somewhat of moral life in the inferior population, he was dear and useful to it on this account; he spread through it somewhat of consolation and of life; but, I conceive, he could and did very little to alleviate its destiny.

I have examined the elementary feudal society; I have placed before you the principal consequences which necessarily flowed from it, whether to the possessor of the fief himself, or his family, or the population congregated around him. Let us now go forth from this narrow inclosure. The population of the fief was not alone upon the land; there were other societies, analogous or different; with which it bore relation. What influence did the general society, to which that population belonged, necessarily exercise upon civilization?

I will make a brief remark before answering this question: It is true that the possessor of the fief and the priest belonged, one and the other, to a general society; they had at a distance

numerous and frequent relations. It was not the same with the colonists, the serfs; every time that, in order to designate the population of the country at this period, we make use of a general word, which seems to imply one and the same society, the word *people*, for example, we do not convey the truth. There was for this population no general society; its existence was purely local. Beyond the territory which they inhabited the colonists had no connection with any thing or person. For them there was no common destiny, no common country; they did not form a people. When we speak of the feudal association as a whole, it is only the possessors of the fiefs that are concerned.

Let us see what were the relations of the petty feudal society with the general society with which it was connected, and to what consequences these relations necessarily led as regards the development of civilization.

You are acquainted with the nature of the ties which united the possessors of the fiefs among themselves, with the obligations of service on the one hand, of protection on the other. I shall not enter into a detail of these obligations; it suffices that you have a general idea of their character. From these obligations there necessarily arose within the mind of each possessor of a fief a certain number of moral ideas and sentiments, ideas of duty, sentiments of affection. The fact is evident that the principle of fidelity, of devotion, of loyalty to engagements, and all sentiments connected therewith, were developed and sustained by the relations of the possessors of the fiefs between themselves.

These obligations, duties and sentiments endeavored to convert themselves into rights and institutions. Every one knows that feudalism desired legally to determine what were the services due from the possessor of the fief toward his suzerain; what were the services which he might expect in return; in what cases the vassal owed pecuniary or military aid to his suzerain; in what forms the suzerain ought to obtain the consent of his vassals, for services to which they were not compelled by the simple tenure of their fiefs. Attempts were made to place all their rights under the guarantee of institutions, which aimed at insuring their being respected. Thus, the seignorial jurisdictions were destined to render justice between the possessors of the fiefs upon claims carried before their common suzerain. Thus, also, each lord who was of any consideration assembled his vassals in a parliament, in order to treat with them concerning matters which required their consent or their concurrence. In short, there existed a collection of political, judicial and military means, with which attempts were made to organize the feudal system, converting

the relations between the possessors of fiefs into rights and institutions.

But these rights and these institutions had no reality, no guarantee.

If one is asked what is meant by a guarantee, a political guarantee, one is led to perceive that its fundamental character is the constant presence, in the midst of the society, of a will, of a power disposed and in a condition to impose a law upon particular wills and powers, to make them observe the common rule and respect the general right.

There are only two systems of political guarantees possible: it is either necessary there should be a particular will and power so superior to all others that none should be able to resist it, and that all should be compelled to submit to it as soon as it interferes; or else that there should be a public will and power, which is the result of agreement, of the development of particular wills, and which, once gone forth from them, is in a condition to impose itself upon, and to make itself respected equally by all.

Such are the two possible systems of political guarantees: the despotism of one or of a body, or free government. When we pass systems in review, we find that all of them come under one or other of these heads.

Well, neither one nor the other existed, nor could exist, under the feudal system.

No doubt the possessors of the fiefs were not all equal among themselves; there were many of superior power, many powerful enough to oppress the weaker. But there was no one, beginning from the first of the suzerains, the king, who was in condition to impose law upon all the others and make himself obeyed. Observe that all the permanent means of power and action were wanting: there were no permanent troops, no permanent taxes, no permanent tribunals. The social powers and institutions had, after a manner, to recommence and create themselves anew every time they were required. A tribunal was obliged to be constructed for every process, an army whenever there was a war to be made, a revenue whenever money was wanted; everything was occasional, accidental and special; there was no means of central, permanent and independent government. It is plain that, in such a system, no individual was in a condition to impose his will upon others, or to cause the general rights to be respected by all.

On the other hand, resistance was as easy as repression was difficult. Shut up in his castle, having to do only with a small number of enemies, easily finding among vassals of his own condition the means of coalition, and of assistance,

the possessor of the fief defended himself with the greatest facility.

Thus, then, we see that the first system of guarantees, the system which places them in the intervention of the strongest, was not possible under feudalism.

The other system, that of a free government, a public power, was equally impracticable; it could never have arisen in the bosom of feudalism. The reason is sufficiently simple. When we speak, in the present day, of a public power, of that which we call the rights of sovereignty, the right of giving laws, taxing and punishing, we all think that those rights belong to no one, that no one has, on his own account, a right to punish others, and to impose upon them a charge, a law. Those are rights which belong only to society in the mass, rights which are exercised in its name, which it holds not of itself, but receives from the Highest. Thus, when an individual comes before the powers invested with these rights, the sentiment which, perhaps without his consciousness, reigns in him is, that he is in the presence of a public and legitimate power, which possesses a mission for commanding him, and he is submissive beforehand and internally. But it was wholly otherwise under feudalism. The possessor of the fief, in his domain, was invested with all the rights of sovereignty over those who inhabited it; they were inherent to the domain, and a part of his private property. What are at present public rights were then private rights; what is now public power was then private power. When the possessor of a fief, after having exercised sovereignty in his own name, as a proprietor over all the population amid which he lived, presented himself at an assembly, a parliament held before his suzerain, a parliament not very numerous, and composed in general of men who were his equals, or nearly so, he did not bring with him, nor did he carry away the idea of a public power. This idea was in contradiction to all his existence, to all that he had been in the habit of doing in the interior of his own domains. He saw there only men who were invested with the same rights as himself, who were in the same situation, and, like him, acted in the name of their personal will. Nothing in the most elevated department of the government, in what we call public institutions, conveyed to him, or forced him to recognize this character of superiority and generality, which is inherent to the idea that we form to ourselves of public powers. And if he was dissatisfied with the decision, he refused to agree with it, or appealed to force for resistance.

Under the feudal system, force was the true and habitual guarantee of right, if, indeed, we may call force a guarantee.

All rights had perpetual recourse to force to make themselves recognized or obeyed. No institution succeeded in doing this; and this was so generally felt that institutions were rarely appealed to. If the seignorial courts and parliaments of vassals had been capable of influence, we should have met with them in history more frequently than we do, and found them exerting more activity; their rarity proves their invalidity.

At this we must not be astonished; there is a reason for it, more decisive and deeply seated than those which I have described.

Of all systems of government and political guarantee, the federative system is certainly the most difficult to establish and to render prevalent; a system which consists in leaving in each locality and each particular society all that portion of the government which can remain there, and in taking from it only that portion which is indispensable to the maintenance of the general society, and carrying this to the center of that society, there to constitute of it a central government. The federative system, logically the most simple, is, in fact, the most complex. In order to reconcile the degree of local independence and liberty which it allows to remain, with the degree of general order and submission which it demands and supposes in certain cases, a very advanced degree of civilization is evidently requisite; it is necessary that the will of man, that individual liberty, should concur in the establishment and maintenance of this system, much more than in that of any other, for its means of coercion are far less than those of any other.

The federative system, then, is that which evidently requires the greatest development of reason, morality and civilization in the society to which it is applied. Well, this, nevertheless, was the system which feudalism endeavored to establish; the idea of general feudalism, in fact, was that of a federation. It reposed upon the same principles on which are founded, in our day, the federation of the United States of America, for example. It aimed at leaving in the hands of each lord all that portion of government and sovereignty which could remain there, and to carry to the suzerain, or to the general assembly of barons, only the least possible portion of power, and that only in cases of absolute necessity. You perceive the impossibility of establishing such a system amid ignorance, amid brutal passions—in short, in a normal state so imperfect as that of man under feudalism. The very nature of government was contradictory to the ideas and manners of the very men to whom it was attempted to be applied. Who can be astonished at the ill success of these endeavors at organization?

We have considered feudal society, first in its most simple and fundamental element, then in its entirety. We have examined,

under these two points of view, that which it necessarily did, that which naturally flowed from it, as to its influence upon the course of civilization. I conceive that we have arrived at this double result:

First, federalism has exerted a great, and, on the whole, a salutary influence upon the internal development of the individual ; it has awakened in men's minds ideas, energetic sentiments, moral requirements, fine developments of character and passion.

Secondly, under the social point of view, it was unable to establish either legal order or political guarantees ; it was indispensable to the revival in Europe of society, which had been so entirely dissolved by barbarism that it was incapable of a more regular and more extended form ; but the feudal form, radically bad in itself, could neither regulate nor extend itself. The only political right which the feudal system caused to assert itself in European society was the right of resistance—I do not say legal resistance, that could not have place in a society so little advanced. The progress of society consists precisely in substituting, on the one hand, public powers for particular wills ; on the other, legal, for individual resistance. In this consists the grand aim, the principal perfection of the social order ; much latitude is left to personal liberty ; then, when that liberty fails, when it becomes necessary to demand from it an account of itself, appeal is made to public reason alone, to determine the process instituted against the liberty of the individual. Such is the system of legal order and of legal resistance. You perceive, without difficulty, that under feudalism there existed nothing of this sort. The right of resistance which the feudal system maintained and practised was the right of personal resistance—a terrible, unsocial right, since it appeals to force and to war, which is the destruction of society itself ; a right which, nevertheless, should never be abolished from the heart of man, for its abolition is the acceptance of servitude. The sentiment of the right or resistance had perished in the disgrace of Roman society, and could not rise anew from its wreck ; it could not come more naturally, in my opinion, from the principle of the Christian society. To feudalism we are indebted for its re-introduction into the manners of Europe. It is the boast of civilization to render it always useless and inactive ; it the boast of the feudal system to have constantly professed and defended it.

Such, if I do not deceive myself, is the result of an examination of feudal society, considered in itself, in its general elements, and independently of historical development. If we pass on to facts, to history, we shall see that has happened which might have been looked for ; that the feudal system has done what it was fitted to do ; that its destiny has been in conformity

with its nature. Events may be adduced in proof of all the conjectures and inferences which I have drawn from the very nature of this system.

Cast a glance upon the general history of feudalism between the tenth and thirteenth centuries ; it is impossible to mistake the great and salutary influence exerted by it upon the development of sentiments, characters, and ideas. We cannot look into the history of this period without meeting with a crowd of noble sentiments, great actions, fine displays of humanity, born evidently in the bosom of feudal manners. Chivalry, it is true, does not resemble feudalism—nevertheless, it is its daughter : from feudalism issued this ideal of elevated, generous, loyal sentiments. It says much in favor of its parentage.

Turn your eyes to another quarter : the first bursts of European imagination, the first attempts of poetry and of literature, the first intellectual pleasures tasted by Europe on its quitting barbarism—under the shelter, under the wings, of feudalism, in the interior of the feudal castles all these were born. This kind of development of humanity requires a movement in the soul, in life, leisure, a thousand conditions which are not to be met with in the laborious, melancholy, coarse, hard existence of the common people. In France, in England, in Germany, it is with the feudal times that the first literary recollections, the first intellectual enjoyments of Europe connect themselves.

On the other, if we consult history upon the social influence of feudalism, its answers will always be in harmony with our conjectures ; it will reply that the feudal system has been as much opposed to the establishment of general order as to the extension of general liberty. Under whatever point of view you consider the progress of society, you find the feudal system acting as an obstacle. Therefore, from the earliest existence of feudalism, the two forces which have been the grand motive powers of the development of order and liberty—on one hand the monarchical power, the popular power on the other ; royalty, and the people—have attacked and struggled against it unceasingly. Some attempts have, at different times, been made to regulate it, and construct out of it a state somewhat legal and general : in England, such attempts were made by William the Conqueror and his sons ; in France, by St. Louis ; in Germany, by many of the emperors. All attempts, all efforts have failed. The very nature of feudal society was repugnant to order and legality. In modern ages, some men of intellect have attempted to re-establish feudalism as a social system ; they have desired to discover therein a legal, regulated, and progressive state ; they have made of it an age of gold. But ask them to assign the age of gold to some particular place or time, and they can do no such thing : it is an Utopia without a date, a drama for which

we find, in past times, neither theater nor actors. The cause of this error is easy to discover, and it equally explains the mistake of those who cannot pronounce the name of feudalism without cursing it. Neither one party nor the other has taken the pains to consider the double aspect under which feudalism presents itself ; to distinguish, on the one hand, its influence upon the individual development of man, upon sentiments, characters and passions, and, on the other, its influence upon the social state. The one party has not been able to persuade itself that a social system, in which so many beautiful sentiments, so many virtues are found—in which they behold the birth of all literatures, and in which manners assume a certain elevation and nobility—can have been so bad and fatal as it is pretended. The other party has only seen the wrong done by feudalism to the mass of the population, the obstacles opposed by it to the establishment of order and liberty ; and this party has not been able to believe that fine characters, great virtues, and any progress, can have resulted from it. Both have mistaken the double element of civilization ; they have not understood that it consists of two developments, of which the one may, in time, produce itself independently of the other ; although, after the course of centuries, and by means of a long series of circumstances, they must reciprocally call forth and lead to each other.

For the rest, that which feudalism was in theory it was in fact ; that to which theory pointed as likely to result from it, has resulted from it. Individuality and energy of personal existence, such was the predominating trait among the conquerors of the Roman world ; the development of individuality necessarily resulted, before all things, from the social system which was founded by and for themselves. That which man himself brings to a social system, at the moment of his entrance, his internal and moral qualities, powerfully influence the situation in which he establishes himself. The situation, in turn, reacts upon these qualities, and strengthens and develops them. The individual predominated in the German society ; it was for the benefit of the development of the individual that feudal society, the daughter of German society, exerted its influence. We shall again find the same fact in the different elements of civilization ; they have remained faithful to their principle ; they have advanced and urged on the world in the direction which they first entered. In our next lecture the history of the church and its influence, from the fifth to the twelfth century, upon European civilization, will furnish us with another and a striking illustration of this fact.

FIFTH LECTURE.

WE have examined the nature and influence of the feudal system ; it is with the Christian church, from the fifth to the twelfth century, that we are now to occupy ourselves : I say, with the *church* ; and I have already laid this emphasis, because it is not with Christianity properly speaking, with Christianity as a religious system, but with the church as an ecclesiastical society, with the Christian clergy, that I propose to engage your attention.

In the fifth century this society was almost completely organized ; not that it has not since then undergone many and important changes ; but we may say that at that time, the church, considered as a corporation, as a government of Christian people, had attained a complete and independent existence.

One glance is enough to show us an immense difference between the state of the church and that of the other elements of European civilization in the fifth century. I have mentioned, as the fundamental elements of our civilization, the municipal and feudal systems, royalty, and the church. The municipal system, in the fifth century, was no more than the wreck of the Roman Empire, a shadow without life or determinate form. The feudal system had not yet issued from the chaos. Royalty existed only in name. All the civil elements of modern society were either in decay or infancy. The church alone was, at the same time, young and constituted ; it alone had acquired a definite form, and preserved all the vigor of early age ; it alone possessed, at once, movement and order, energy and regularity, that is to say, the two great means of influence. Is it not, let me ask you, by moral life, by internal movement, on the one hand, and by order and discipline on the other, that institutions take possession of society ? The church, moreover, had mooted all the great questions which interest man ; it busied itself with all the problems of his nature, and with all the chances of his destiny. Thus its influence upon modern civilization has been very great, greater, perhaps, than even its most ardent adversaries, or its most zealous defenders have supposed. Occupied with rendering it services, or with combating it, they have regarded it only in a polemical point of view, and have therefore, I conceive, been unable either to judge it with equity, or to measure it in all its extent.

The Christian church in the fifth century presents itself as an independent and constituted society, interposed between the masters of the world, the sovereigns, the possessors of the temporal power on the one hand, and the people on the other, serving as a bond between them, and influencing all.

In order completely to know and comprehend its action, we must therefore consider it under three aspects : first of all we must regard it in itself, make an estimate of what it was, of its internal constitution, of the principles which predominated in it, and of its nature ; we must then examine it in its relation to the temporal sovereignties, kings, lords, and others ; lastly, in its relations to the people. And when from this triple examination we shall have deduced a complete picture of the church, of its principles, its situation, and the influence which it necessarily exercised, we shall verify our assertions by an appeal to history ; we shall find out whether the facts and events, properly so called, from the fifth to the twelfth century, are in harmony with the results to which we have been led by the study of the nature of the church, and of its relations, both with the masters of the world and with the people.

First of all, let us occupy ourselves with the church in itself, with its internal condition, and its nature.

The first fact which strikes us, and perhaps the most important, is its very existence, the existence of a religious government, of a clergy, of an ecclesiastical corporation, of a priesthood, of a religion in the sacerdotal state.

With many enlightened men, these very words, a body of priesthood, a religious government, appear to determine the question. They think that a religion which ends in a body of priests, a legally constituted clergy, in short, a governed religion, must be, taking all things together, more injurious than useful. In their opinion, religion is a purely individual relation of man to God ; and that whenever the relation loses this character, whenever an external authority comes between the individual and the object of religious creeds—namely, God—religion is deteriorated, and society in danger.

We cannot dispense with an examination of this question. In order to ascertain what has been the influence of the Christian church, we must know what ought to be, by the very nature of the institution, the influence of a church and of a clergy. In order to appreciate this influence, we must find out, first of all, whether religion is, in truth, purely individual ; whether it does not provoke and give birth to something more than merely a private relation between each man and God ; or whether it necessarily becomes a source of new relations between men, from which a religious society and a government of that society necessarily flow.

If we reduce religion to the religious sentiment properly so called, to that sentiment which is very real, though somewhat vague and uncertain as to its object, and which we can scarcely characterize otherwise than by naming it,—to this sentiment which addresses itself sometimes to external nature, sometimes to the innermost recesses of the soul, to-day to poetry, to-morrow to the mysteries of the future, which, in a word, wanders everywhere, seeking everywhere to satisfy itself, and fixing itself nowhere,—if we reduce religion to this sentiment, it seems evident to me that it should remain purely individual. Such a sentiment may provoke a momentary association between men ; it can, it even ought to take pleasure in sympathy, nourishing and strengthening itself thereby. But by reason of its fluctuating and doubtful character it refuses to become the principle of a permanent and extensive association, to adapt itself to any system of precepts, practices, and forms ; in short, to give birth to a religious society and government.

But either I deceive myself strangely, or this religious sentiment is not the complete expression of the religious nature of man. Religion, I conceive, is a different thing, and much more than this.

In human nature and in human destiny there are problems of which the solution lies beyond this world, which are connected with a class of things foreign to the visible world, and which inveterately torment the soul of man, who is fixedly intent upon solving them. The solution of these problems, creeds, dogmas, which contain that solution, or at least flatter themselves that they do, these constitute the first object and the first source of religion.

Another path leads men to religion. To those among you who have prosecuted somewhat extended philosophical studies, it is, I conceive, sufficiently evident at present that morality exists independently of religious ideas ; that the distinction of moral good and evil, the obligation to shun the evil, and to do the good, are laws, which, like the laws of logic, man discovers in his own nature, and which have their principle in himself, as they have their application in his actual life. But these facts being decided, the independence of morality being admitted, a question arises in the human mind—Whence comes morality? To what does it lead? Is this obligation to do good, which subsists of itself, an isolated fact, without author and aim? Does it not conceal from, or rather does it not reveal to man a destiny which is beyond this world? This is a spontaneous and inevitable question, by which morality, in its turn, leads man to the door of religion, and discovers to him a sphere from which he had not borrowed morality.

Thus, in the problems of our nature, upon one hand, and in

the necessity of discovering a sanction, origin, and aim for morality, on the other, we find assured and fruitful sources of religion, which thus presents itself under aspects very different from that of a mere instrument, as it has been described ; it presents itself as a collection—first, of doctrines called forth by problems which man discovers within himself ; and, of precepts which correspond to those doctrines, and give to natural morality a meaning and sanction ; second, of promises which address themselves to the hopes of humanity in the future. This is what truly constitutes religion ; this is what it is at bottom, and not a mere form of sensibility, a flight of the imagination, a species of poetry.

Reduced in this manner to its true elements and to its essence, religion no longer appears as a purely individual fact, but as a powerful and fruitful principle of association. Consider it as a system of creeds and dogmas : truth belongs to no one ; it is universal, absolute ; men must seek and profess it in common. Consider the precepts that associate themselves with doctrines : an obligatory law for one is such for all ; it must be promulgated, it must bring all men under its empire. It is the same with the promises made by religion in the name of its creeds and precepts : they must be spread abroad, and all men must be called to gather the fruits of them. From the essential elements of religion, then, you see that the religious society is born ; indeed, it flows therefrom so infallibly that the word which expresses the most energetic social sentiment, the most imperious necessity of propagating ideas and extending a society, is the word proselytism, a word which applies above all to religious creeds, and, indeed, seems to be almost exclusively consecrated to them.

The religious society being once born, when a certain number of men become united in common religious creeds, under the law of common religious precepts, and in common religious hopes, that society must have a government. There is no society which can survive a week, an hour, without a government. At the very instant in which the society forms itself, and even by the very fact of its formation, it calls a government, which proclaims the common truth, the bond of the society, and promulgates and supports the precepts which originate in that truth. The necessity for a power, for a government over the religious society, as over every other, is implied in the fact of the existence of that society. And not only is government necessary, but it naturally forms itself. I must not pause for any time to explain how government originates and establishes itself in society in general. I shall confine myself to saying that, when things follow their natural laws, when external force does not mix itself up with them, power always flies to the most capable, to the best, to those who will lead society toward its aim. In a warlike ex-

pedition the bravest obtain the power. If research or skilful enterprise is the object of an association, the most capable will be at the head of it. In all things, when the world is left to its natural course, the natural inequality of men freely displays itself, and each takes the place which he is capable of occupying. Well, as regards religion, men are no more equal in talents, faculties, and power than in the other cases ; such a one will be better able than any other to expound religious doctrines, and to cause them to be generally adopted ; some other bears about him more authority to induce the observance of religious precepts ; a third will excel in sustaining and animating religious emotions and hopes in the souls of men. The same inequality of faculties and influence which gives rise to power in civil society originates it equally in religious society. Missionaries arise and declare themselves like generals. Thus, as on one hand religious government necessarily flows from the nature of religious society, so on the other it naturally develops itself therein by the mere effect of the human faculties and their unequal partition. Therefore, from the moment at which religion is born in man, religious society develops itself ; and from the moment at which religious society appears it gives rise to its government.

But now a fundamental objection arises : there is nothing in this case to ordain or impose ; nothing coercive. There is no room for government, since unlimited liberty is required to exist.

It is, I conceive, a very rude and petty idea of government in general to suppose that it resides solely, or even principally, in the force which it exerts to make itself obeyed in its coercive element.

I leave the religious point of view ; I take civil government. I pray you follow with me the simple course of facts. The society exists : there is something to be done, no matter what, in its interest and name ; there is a law to make, a measure to take, a judgment to pronounce. Assuredly there is likewise a worthy manner of fulfilling these social wants ; a good law to make, a good measure to take, a good judgment to pronounce. Whatever may be the matter in hand, whatever may be the interest in question, there is in every case a truth that must be known, a truth which must decide the conduct of the question.

The first business of government is to seek this truth, to discover what is just, reasonable, and adapted to society. When it has found it, it proclaims it. It becomes then necessary that it should impress it upon men's minds ; that the government should make itself approved of by those upon whom it acts, that it should persuade them of its reasonableness. Is there anything coercive in this? Assuredly not. Now, suppose that the truth which ought to decide concerning the affair, no matter

what, suppose I say, that this truth once discovered and proclaimed, immediately all understandings are convinced, all wills determined, that all recognize the reasonableness of the government, and spontaneously obey it ; there is still no coercion, there is no room for the employment of force. Is it that the government did not exist? Is it that, in all this, there was no government? Evidently there was a government and it fulfilled its task. Coercion comes then only when the resistance of individual will occurs, when the idea, the proceeding which the government has adopted, does not obtain the approbation and voluntary submission of all. The government then employs force to make itself obeyed ; this is the necessary result of human imperfection, an imperfection which resides at once in the governing power and in the society. There will never be any way of completely avoiding it ; civil governments will ever be compelled to have recourse, to a certain extent, to coercion. But governments are evidently not constituted by coercion : whenever they can dispense with it they do, and to the great profit of all ; indeed, their highest perfection is to dispense with it, and to confine themselves to methods purely moral, to the action which they exert upon the understanding ; so that the more the government dispenses with coercion, the more faithful it is to its true nature, the better it fulfills its mission. It is not thereby reduced in power or contracted, as is vulgarly supposed ; it acts only in another manner, and in a manner which is infinitely more general and powerful. Those governments which make the greatest use of coercion succeed not nearly so well as those which employ it scarcely at all.

In addressing itself to the understanding, in determining the will, in acting by purely intellectual means, the government, instead of reducing, extends and elevates itself ; it is then that it accomplishes the most and the greatest things. On the contrary, when it is obliged incessantly to employ coercion, it contracts and lessens itself, and effects very little, and that little very ill.

Thus the essence of government does not reside in coercion, in the employment of force ; but that which above all things constitutes it, is a system of means and powers, conceived with the design of arriving at the discovery of what is applicable to each occasion ; at the discovery of truth, which has a right to rule society, in order that afterward the minds of men may be brought to open themselves to it, and adopt it voluntarily and freely. The necessity for, and the actual existence of a government are thus perfectly conceivable, when there is no occasion for coercion, when even it is absolutely interdicted.

Well, such is the government of the religious society. Undoubtedly, coercion is interdicted to it ; undoubtedly, the employment of force by it is illegitimate, whatever may be its aim,

for the single reason that its exclusive territory is the human conscience : but not less, therefore, does it subsist ; not the less has it to accomplish all the acts I have mentioned. It must discover what are the religious doctrines which solve the problems of the human destiny ; or, if there exists already a general system of creeds whereby those problems are solved, it must discover and exhibit the consequences of that system, as regards each particular case ; it must promulgate and maintain the precepts which correspond to its doctrines ; it must preach and teach them, in order that, when the society wanders from them, it may bring back. There must be no coercion ; the duties of this government are, examining, preaching, and teaching religious virtues ; and, at need, admonishing or censuring. Suppress coercion as completely as you will, you will yet behold all the essential questions of the organization of a government arise and claim solutions. For example, the question whether a body of religious magistrates is necessary, or whether it is possible to trust to the religious inspiration of individuals (a question which is debated between the majority of religious societies and the Quakers), will always exist, it will always be necessary to discuss it. In like manner, the question, whether, when it has been agreed that a body of religious magistrates is necessary, we should prefer a system of equality, of religious ministers equal among themselves and deliberating in common, to an hierarchical constitution, with various degrees of power ; this question will never come to an end, because you deny all coercive power to ecclesiastical magistrates, whosoever they may be. Instead, then, of dissolving religious society in order that we may have the right of destroying religious government, we must rather recognize that the religious society forms itself naturally, that the religious government flows as naturally from the religious society, and that the problem to be solved is to ascertain under what conditions this government should exist, what are its foundations, principles, and conditions of legitimacy. This is the real investigation which is imposed by the necessary existence of a religious government as of all others.

The conditions of legitimacy are the same for the government of a religious society as for that of any other ; they may be reduced to two : the first, that the power should attach itself to and remain constantly in the hands of the best and most capable, as far, at least, as human imperfection will allow of its doing so ; that the truly superior people who exist dispersed among the society should be sought for there, brought to light, and called upon to unfold the social law, and to exercise power ; the second that the power legitimately constituted should respect the legitimate liberties of those over whom it exercises itself. In these two conditions, a good system of forming and organizing power,

and a good system of guarantees of liberty, consists the worth of government in general, whether religious or civil; all governments ought to be judged according to this criterion.

Instead, then, of taunting the church, or the government of the Christian world, with its existence, we should find out how it was constituted, and whether its principles corresponded with the two essential conditions of all good government. Let us examine the church in this twofold view.

As regards the formation and transmission of power in the church, there is a word which is often used in speaking of the Christian clergy, and which I wish to discard; it is the word *caste*. The body of ecclesiastical magistrates has often been called a caste. Look around the world; take any country in which castes have been produced, in India or Egypt; you will see everywhere that the caste is essentially hereditary; it is the transmission of the same position and the same power from father to son. Wherever there is no inheritance there is no caste, there is a corporation; the spirit of a corporation has its inconveniences, but it is very different from the spirit of the caste. The word *caste* cannot be applied to the Christian church. The celibacy of the priests prevents the Christian church from ever becoming a caste.

You already see, to a certain extent, the consequences of this difference. To the system of caste, to the fact of inheritance, monopoly is inevitably attached. This results from the very definition of the word caste. When the same functions and the same powers become hereditary in the same families, it is evident that privilege must have been attached to them, and that no one could have acquired them independently of his origin. In fact, this was what happened; wherever the religious government fell into the hands of a caste it became a matter of privilege; no one entered into it but those who belonged to the families of the caste. Nothing resembling this is met with in the Christian church; and not only is there no resemblance found, but the church has continually maintained the principle of the equal admissibility of all men to all her duties and dignities, whatever may have been their origin. The ecclesiastical career, particularly from the fifth to the twelfth century, was open to all. The church recruited herself from all ranks, alike from the inferior, as well as the superior; more often, indeed, from the inferior. Around her all was disposed of under the system of privilege; she alone maintained the principle of equality and competition; she alone called all who were possessed of legitimate superiority to the possession of power. This was the first great consequence which naturally resulted from her being a body, and not a caste.

Again, there is an inherent spirit in castes, the spirit of immo-

bility. This assertion needs no proof. Open any history and you will see the spirit of immobility imprinted upon all societies, whether political or religious, where the system of castes dominated. The fear of progress, it is true, was introduced at a certain epoch, and up to a certain point, in the Christian church. But we cannot say that it has dominated there; we cannot say that the Christian church has remained immovable and stationary; for many long ages she has been in movement and progress; sometimes provoked by the attacks of an external opposition, sometimes impelled from within, by desires of reform and internal development. Upon the whole it is a society which has continually changed and marched onward, and which has a varied and progressive history. There can be no doubt that the equal admission of all men to the ecclesiastical functions, that the continued recruiting of the church according to principles of equality, has powerfully contributed to maintain, and incessantly reanimate within it, its life and movement, to prevent the triumph of the spirit of immobility.

How could the church, who thus admitted all men to power, assure herself of their right to it? How could she discover and bring to light, from the heart of society, the legitimate superiorities which were to share the government?

Two principles were in vigor in the church: First, the election of the inferior by the superior—the choice, the nomination; second, the election of the superior by the subordinates—that is, an election properly so called, what we understand as such in the present day.

The ordination of priests, for instance, the power of making a man a priest, belonged to the superior alone. The choice was exercised by the superior over the inferior. So, in the collation of certain ecclesiastical benefices, among others, benefices attached to the feudal concessions, it was the superior—king, pope, or lord—who nominated the incumbent; in other cases, the principle of election, properly so called, was in force. The bishops had long been, and at the epoch which occupies us were still very often, elected by the body of the clergy. Sometimes even the congregations interfered. In the interior of monasteries, the abbot was elected by the monks. At Rome, the popes were elected by the college of cardinals, and at one time even the whole of the Roman clergy took part in the election. You thus see the two principles—the choice of the inferior by the superior, and the election of the superior by the subordinate—acknowledged and acted upon in the church, especially at the epoch under consideration. It was by one or other of these means that she nominated the men called upon to exercise a portion of the ecclesiastical power.

Not only were these two principles co-existent, but being

essentially different there was a struggle between them. After many centuries and many vicissitudes the nomination of the inferior by the superior gained the mastery in the Christian church; but as a general thing, from the fifth to the twelfth century, it was the other principle, the choice of the superior by the subordinate, which still prevailed. And do not be surprised at the co-existence of two principles so dissimilar. Regard society in general, the natural course of the world, the manner in which power is transmitted in it, you will see that this transmission is brought into force sometimes according to one of these principles and sometimes according to the other. The church did not originate them; she found them in the providential government of human things, and thence she borrowed them. There is truth and utility in each of them; their combination will often be the best means of discovering the legitimate power. It is a great misfortune, in my opinion, that one of these two, the choice of the inferior by the superior, should have gained the mastery in the church; the second, however, has never entirely prevailed; and under various names, with more or less success, it has been reproduced in all epochs, so as at all events to enter protest and interrupt prescription.

The Christian church derived, at the epoch which occupies us, immense strength from its respect for equality and legitimate superiorities. It was the most popular society, the most accessible and open to all kinds of talent, to all the noble ambitions of human nature. Thence arose its power, much more than from its riches, or from the illegitimate means which it has too often employed.

As regards the second condition of a good government, respect for liberty, there was much to wish for in the church.

Two evil principles met in it; the one avowed, and, as it were, incorporated in the doctrines of the church; the other introduced into it by human weakness, and not as a legitimate consequence of doctrine.

The first was the denial of the right of individual reason, the pretension to transmit creeds down through the whole religious society, without any one having the right to judge for himself. It was easier to lay down this principle than to make it actually prevail. A conviction does not enter into the human intellect unless the intellect admits it; it must make itself acceptable. In whatever form it presents itself, and whatever name it evokes, reason weighs it; and if the creed prevail, it is from being accepted by reason. Thus, under whatever form they may be concealed, the action of the individual reason is always exerted upon the ideas which are sought to be imposed upon it. It is very true that reason may be altered; it may to a certain extent abdicate and mutilate itself; it may be induced to make an ill

use of its faculties, or not to put in force all the use of them to which it has a right; such, indeed, has been the consequence of the ill principle admitted by the church; but as regards the pure and complete influence of this principle, it never has been, and never can be, put into full force.

The second evil principle is, the right of constraint which the church arrogates to herself—a right contrary to the very nature of religious society, to the very origin of the church, and her primitive maxims—a right which has been disputed by many of the most illustrious fathers, St. Ambrose, St. Hilary, St. Martin, but which has, notwithstanding, prevailed, and become a dominant fact. The pretension of forcing to believe, if two such words can stand in juxtaposition, or of physically punishing belief, the persecution of heresy, contempt for the legitimate liberty of human thought, this is an error which was introduced into the church even before the fifth century; and dearly has it cost her.

If, then, we consider the church in relation to the liberty of her members, we perceive that her principles in this respect were less legitimate and less salutary than those which presided at the formation of the ecclesiastical power. It must not be supposed, however, that an evil principle radically vitiates an institution, nor even that it is the cause of all the evil which it carries in its breast. Nothing more falsifies history than logic: when the human mind rests upon an idea, it draws from it every possible consequence, makes it produce all the effect it is capable of producing, and then pictures it in history with the whole retinue. But things do not happen in this way; events are not so prompt in their deductions as the human mind. There is in all things a mixture of good and evil so profound and invincible that wherever you penetrate, when you descend into the most hidden elements of society or the soul, you find there these two orders of existent facts developing themselves side by side, combating without exterminating one another. Human nature never goes to the extremity either of evil or good; it passes incessantly from one to the other, erecting itself at the moment when it seems most likely to fall, and weakening at the moment when its walk seems firmest. We shall find here that character of discordance, variety and strife, which I have remarked as being the fundamental characteristic of European civilization. There is still another general fact which characterizes the government of the church, and of which it is necessary to take notice.

At the present day, when the idea of government presents itself to us, whatever it may be, we know that there is no pretension of governing other than the external actions of man—the civil relations of men among themselves; governments profess to apply themselves to nothing more. With regard to human

thought, human conscience, and morality, properly so called, with regard to individual opinions and private manners, they do not interfere; these fall within the domain of liberty.

The Christian church did or wished to do directly the contrary; she undertook to govern the liberty, private manners and opinions of individuals. She did not make a code like ours, to define only actions at once morally culpable and socially dangerous, and only punishing them in proportion as they bore this twofold character. She made a catalogue of all actions morally culpable, and under the name of sins she punished all with the intention of repressing all; in a word, the government of the church did not address itself, like modern governments, to the external man, to the purely civil relations of men among themselves; it addressed itself to the internal man, to the thought and conscience, that is to say, to all that is most private to him, most free and rebellious against constraint. The church then from the very nature of her enterprise, together with the nature of some of the principles upon which she founded her government, was in danger of becoming tyrannical and of employing illegitimate force. But at the same time the force encountered a resistance which it could not vanquish. However little movement and space are left them, human thought and liberty energetically react against all attempts to subdue them, and at every moment compel the very despotism which they endure to abdicate. Thus it happened in the bosom of the Christian church. You have seen the proscription of heresy, the condemnation of the right of inquiry, the contempt for individual reason, and the principle of the imperative transmission of doctrines upon authority. Well, show one society in which individual reason has been more boldly developed than in the church! What are sects and heresies, if they are not the fruit of individual opinions? Sects and heresies, all the party of opposition in the church, are the incontestable proof of the moral life and activity which reigned in it; a life tempestuous and painful, overspread with perils, errors, crimes, but noble and powerful, and one that has given rise to the finest developments of mind and intellect. Leave the opposition, look into the ecclesiastical government itself; you will find it constituted and acting in a manner very different from what some of its principles seem to indicate. It denied the right of inquiry, and wished to deprive individual reason of its liberty; and yet it is to reason that it incessantly appeals, and liberty is its dominant fact. What are its institutions and means of action? Provincial councils, national councils, general councils, a continual correspondence, the incessant publication of letters, admonitions, and writings. Never did a government proceed to such an extent by discussion and common deliberation. We might suppose ourselves in the heart of the Greek

schools of philosophy; and yet it was no mere discussion or seeking for truth that was at issue; it involved questions of authority, of adopting measures, of promulgating decrees; in fine, of a government. But such in the very heart of this government was the energy of intellectual life, that it became the dominant and universal fact, to which all others gave way; and what shone forth on all sides was the exercise of reason and liberty.

I am far from inferring that these bad principles which I have attempted to set forth, and which, in my opinion, existed in the system of the church, remained in it without effect. At the epoch which now occupies us, they already bore but too bitter fruit, and were destined at a later period to bear fruit still more bitter; but they have not accomplished all the evil of which they were capable, they have not stifled all the good which grew in the same soil. Such was the church, considered in itself, in its internal construction and nature. I now pass to its relations with the sovereigns, the masters of temporal power. This is the second point of view under which I promised to consider it.

When the Empire fell—when, instead of the ancient Roman system, the government, in the midst of which the church had taken birth, with which she had arisen, and had habits in common and ancient ties, she found herself exposed to those barbarian kings and chiefs who wandered over the land or remained fixed in their castles, and to whom neither traditions, creeds nor sentiments could unite her; her danger was great, and as great was her terror.

A single idea became dominant in the church; this was to take possession of the new-comers, to convert them. The relations between the church and the barbarians had, at first, scarcely any other aim. In influencing the barbarians it was necessary that their senses and their imagination should be appealed to. We therefore find at this epoch a great augmentation in the number, pomp and variety of the ceremonies of worship. The chronicles prove that this was the chief means by which the church acted upon the barbarians; she converted them by splendid spectacles. When they were established and converted, and when there existed some ties between them and the church, she did not cease to run many dangers on their part. The brutality and recklessness of the barbarians were such that the new creeds and sentiments with which they were inspired exercised but little empire over them. Violence soon reassumed the upper hand, and the church, like the rest of society, was its victim. For her defence she proclaimed a principle formerly laid down under the Empire, although more vaguely—this was the separation of the spiritual from the temporal power, and their reciprocal independence. It was by the aid of this

principle that the church lived freely in connection with the barbarians; she maintained that force could not act upon the system of creeds, hopes, and religious promises; that the spiritual world and the temporal world were entirely distinct. You may at once see the salutary consequences resulting from this principle. Independently of its temporal utility to the church, it had this inestimable effect of bringing about, on the foundation of right, the separation of powers, and of controlling them by means of each other. Moreover, in sustaining the independence of the intellectual world, as a general thing, in its whole extent, the church prepared the way for the independence of the individual intellectual world—the independence of thought. The church said that the system of religious creeds could not fall under the yoke of force; and each individual was led to apply to his own case the language of the church. The principle of free inquiry, of liberty of individual thought, is exactly the same as that of the independence of general spiritual authority with regard to temporal power.

Unhappily, it is easy to pass from the desire for liberty to the lust for domination. It thus happened within the bosom of the church; by the natural development of ambition and human pride, the church attempted to establish, not only the independence of spiritual power, but also its domination over temporal power. But it must not be supposed that this pretension had no other source than in the weaknesses of human nature; there were other more profound sources which it is of importance to know.

When liberty reigns in the intellectual world, when thought and human conscience are not subjected to a power which disputes their right to debate and decide, or employs force against them; when there is no visible and constituted spiritual government, claiming and exercising the right to dictate opinions; then the idea of the domination of the spiritual over the temporal order is impossible. Nearly such is the present state of the world. But when there exists, as there did exist in the tenth century, a government of the spiritual order; when thought and conscience come under laws, institutions and powers which arrogate to themselves the right of commanding and constraining them; in a word, when spiritual power is constituted, when it actually takes possession of human reason and conscience in the name of right and force, it is natural that it should be led to assume the domination over the temporal order, that it should say: "Now! I have right and influence over that which is most elevated and independent in man; over his thought, his internal will, and his conscience, and shall I not have right over his exterior, material and passing interests? I am the interpreter of justice and truth, and am I not allowed to regulate worldly

affairs according to justice and truth?" In very virtue of this reasoning, the spiritual order was sure to attempt the usurpation of the temporal order. And this was the more certain from the fact that the spiritual order embraced every development of human thought at that time; there was but one science, and that was theology; but one spiritual order, the theological; all other sciences, rhetoric, arithmetic, even music, all was comprised in theology.

The spiritual power, thus finding itself at the head of all the activity of human thought, naturally arrogated to itself the government of the world. A second cause tended as powerfully to this end—the frightful state of the temporal order, the violence and iniquity which prevailed in the government of temporal societies.

We, for many centuries, have spoken at our ease of the rights of temporal power; but at the epoch under consideration the temporal was mere force, ungovernable brigandage. The church, however imperfect her notions still were concerning morality and justice, was infinitely superior to such a temporal government as this; the cries of the people continually pressed her to take its place. When a pope, or the bishops, proclaimed that a prince had forfeited his rights, and that her subjects were absolved from their oath of fidelity, this intervention, without doubt subject to various abuses, was often, in particular cases, legitimate and salutary. In general, when liberty has failed mankind, it is religion that has had the charge of replacing it. In the tenth century the people were not in a state to defend themselves, and so make their rights available against civil violence: religion, in the name of Heaven, interfered. This is one of the causes which have most contributed to the victories of the theocratical principle.

There is a third, which I think is too seldom remarked: the complexity of situation of the heads of the church, the variety of aspects under which they have presented themselves in society. On one hand they were prelates, members of the ecclesiastical order, and part of the spiritual power, and by this title independent; on the other, they were vassals, and, as such, engaged in the bonds of civil feudalism. This is not all; besides being vassals they were subjects; some portion of the ancient relations between the Roman emperors, and the bishops, and the clergy, had now passed into those between the clergy and the barbarian sovereigns. By a series of causes, which it would be too tedious to develop, the bishops had been led to regard, up to a certain point, the barbarian sovereigns as the successors of the Roman emperors, and to attribute to them all their prerogatives. The chiefs of the clergy, then, had a three-fold character: an ecclesiastical character, and as such, an inde-

pendent one ; a feudal character, one as such bound to certain duties, and holding by certain services ; and, lastly, the character of a simple subject, and as such bound to obey an absolute sovereign. Now mark the result. The temporal sovereigns, who were not less covetous and ambitious than the bishops, availed themselves of their rights as lords or sovereigns to encroach upon the spiritual independence, and to seize upon the collation of benefices, the nomination of bishops, etc. The bishops, on their side, often intrenched themselves in their spiritual independence in order to escape their obligations as vassals or subjects ; so that, on either hand, there was an almost inevitable tendency which led the sovereigns to destroy spiritual independence, and the heads of the church to make spiritual independence a means of universal domination.

The result has been shown in facts of which no one is ignorant : in the quarrels concerning investitures, and in the struggle between the priesthood and the empire. The various situations of the heads of the church, and the difficulty of reconciling them, were the real sources of the uncertainty and contest of these pretensions.

Lastly, the church had a third relation with the sovereigns, which was for her the least favorable and the most unfortunate of them all. She laid claim to co-action, to the right of restraining and punishing heresy ; but she had no means of doing this ; she had not at her disposal a physical force ; when she had condemned the heretic, she had no means of executing judgment upon him. What could she do ? She invoked the aid of what was called the secular arm ; she borrowed the force of civil power as a means of co-action. And she thereby placed herself, in regard to civil power, in a situation of dependence and inferiority. A deplorable necessity to which she was reduced by the adoption of the evil principle of co-action and persecution.

It remains for me to make you acquainted with the relations of the church with the people, what principles were prevalent in them, and what consequences have thence resulted to civilization in general. I shall afterward attempt to verify the inductions we have here drawn from the nature of its institutions and principles, by means of history, facts, and the vicissitudes of the destiny of the church from the fifth to the twelfth century.

SIXTH LECTURE.

WE were unable, at our last meeting, to terminate the inquiry into the state of the church from the fifth to the twelfth century. After having decided that it should be considered under three principal aspects, first, in itself alone, in its internal constitution, and in its nature as a distinct and independent society; next, in its relations to the sovereign and the temporal power; and lastly, in its relations with the people, we have only accomplished the two first divisions of this task. It now remains for me to make you acquainted with the church in its relations with the people. I shall afterward endeavor to draw from this threefold inquiry a general idea of the influence of the church upon European civilization from the fifth to the twelfth century. And lastly, we will verify our assertions by an examination of the facts, by the history of the church itself at that epoch.

You will easily understand that, in speaking of the relations of the church with the people, I am forced to confine myself to very general terms. I cannot enter into a detail of the practices of the church, or of the daily relations of the clergy with the faithful. It is the dominant principles and grand effects of the system and of the conduct of the church toward the Christian people, that I have to place before you.

The characteristic fact, and, it must so be called, the radical vice of the relations of the church with the people, is the separation of the governing and the governed, the non-influence of the governed in their government, the independence of the Christian clergy with regard to the faithful.

This evil must have been provoked by the state of man and of society, for we find it introduced into the Christian church at a very early period. The separation of the clergy and the Christian people was not entirely consummated at the epoch under consideration; there was, on certain occasions, in the election of bishops for instance, at least in some cases, a direct intervention of the Christian people in its government. But this intervention became by degrees more weak and of more rare occurrence; it was from the second century of our era that it begun visibly and rapidly to decline. The tendency to the isolation and independence of the clergy is, in a measure, the history of the church itself from its very cradle. From thence,

it cannot be denied, arose the greater portion of those abuses which, at this epoch, and still more at a later period, have cost so dear to the church. We must not, however, impute them solely to this, nor regard this tendency to isolation as peculiar to the Christian clergy. There is in the very nature of religious society a strong inclination to raise the governing far above the governed, to attribute to the former something distinct and divine. This is the effect of the very mission with which they are charged, and of the character under which they present themselves to the eyes of people, and such an effect is more grievous in the religious society than in any other. What is it that is at stake with the governed? Their reason, their conscience, their future destiny—that is to say, all that is most near to them, most individual, and most free. We can conceive, to a certain point, that although great evil may result therefrom, a man may abandon to an external authority the direction of his material interests, and his temporal destiny. We can understand the philosopher, who, when they came to tell him that his house was on fire, answered, "Go and inform my wife; I do not meddle in the household affairs." But, when it extends to the conscience, the thought and the internal existence, to the abdication of self-government, to the delivering one's self to a foreign power, it is truly a moral suicide, a servitude a hundred-fold worse than that of the body, or than that of the soul. Such, however, was the evil which, without prevailing entirely, as I shall immediately show, gradually usurped the Christian church in its relations with the faithful. You have already seen that, for the clergy themselves, and in the very heart of the church, there was no guarantee for liberty. It was far worse beyond the church and among the laity. Among ecclesiastics, there was, at least, discussion, deliberation and a display of individual faculties; there the excitement of contest supplied, in some measure, the want of liberty. There was none of this between the clergy and the people. The laity took part in the government of the church as mere spectators. Thus we see springing up and prevailing at a very early period, the idea that theology and religious questions and affairs are the privileged domain of the clergy; that the clergy alone have the right, not only of deciding, but of taking part therein at all; that in any case the laity can have no kind of right to interfere. At the period under consideration this theory was already in full power; centuries and terrible revolutions were necessary to conquer it, to bring back within the public domain religious questions and science.

In the principle, then, as well as in fact, the legal separation of the clergy and the Christian people was almost consummated before the twelfth century.

I would not have you suppose, however, that even at this epoch the Christian people were entirely without influence in its government. The legal intervention was wanting, but not influence—that is almost impossible in any government, still more so in a government founded upon a belief common both to the governing and the governed. Wherever this community of ideas is developed, or wherever a similar intellectual movement prevails with the government and the people, there must necessarily exist a connection between them which no vice in the organization can entirely destroy. To explain myself clearly I will take an example near to us, and from the political order: at no epoch in the history of France has the French people had less legal influence on its government, by means of institutions, than in the seventeenth and eighteenth centuries, under Louis XIV and Louis XV.

No one is ignorant that at this period nearly all official and direct influence of the country in the exercise of authority had perished; yet there can be no doubt that the people and the country then exercised upon the government far more influence than in other times—in the times, for instance, when the states-general were so often convoked, when the parliament took so important a part in politics, and when the legal participation of the people in power was much greater.

It is because there is a force which cannot be inclosed by laws, which, when need is, can dispense with institutions: it is the force of ideas, of the public mind and opinion. In France, in the seventeenth and eighteenth centuries, there was a public opinion which was much more powerful than at any other epoch. Although deprived of the means of acting legally upon the government, it acted indirectly by the empire of ideas, which were common alike to the governing and the governed, and by the impossibility which the governing felt of taking no note of the opinion of the governed. A similar fact happened in the Christian church from the fifth to the twelfth century; the Christian people, it is true, were deficient in legal action, but there was a great movement of mind in religious matters—this movement brought the laity and the ecclesiastics into conjunction, and by this means the people influenced the clergy.

In all cases in the study of history it is necessary to hold as highly valuable, indirect influences; they are much more efficacious, and sometimes more salutary, than is generally supposed. It is natural that men should wish their actions to be prompt and evident, should desire the pleasure of participating in their success, power and triumph. This is not always possible, not always even useful. There are times and situations in which indirect and unseen influences are alone desirable and practicable. I will take another example from the political

order. More than once, especially in 1641, the English parliament, like many other assemblies in similar crisis, has claimed the right of nominating directly the chief officers of the crown, the ministers, councillors of state, etc.; it regarded this direct action in the government as an immense and valuable guarantee. It has sometimes exercised this prerogative, and always with bad success. The selections were ill concerted, and affairs ill governed. But how is it in England at the present day? Is it not the influence of parliament which decides the formation of the ministry, and the nomination of all the great officers of the crown? Certainly; but then it is an indirect and general influence, instead of a special intervention. The end at which England has long aimed is gained; but by different means; the first means which were tried had never acted beneficially.

There is a reason for this, concerning which I ask your permission to detain you for a moment. Direct action supposes, in those to which it is confided, far more enlightenment, reason and prudence; as they are to attain the end at once, and without delay, it is necessary that they should be certain of not missing that end. Indirect influences, on the contrary, are only exercised through obstacles, and after tests which restrain and rectify them; before prospering, they are condemned to undergo discussion, and to see themselves opposed and controlled; they triumph but slowly, and, in a measure, conditionally. For this reason, when minds are not sufficiently advanced and ripened to guarantee their direct action being taken with safety, indirect influences, although often insufficient, are still preferable. It was thus that the Christian people influenced their government, very incompletely, in much too limited an extent, I am convinced—but still they influenced it.

There was also another cause of approximation between the church and the people; this was the dispersion, so to speak, of the Christian clergy among all social conditions. Almost everywhere, when a church has been constituted independently of the people whom it governed, the body of priests has been formed of men nearly in the same situation; not that great inequalities have not existed among them, but upon the whole the government has appertained to colleges of priests living in common, and governing, from the depths of the temple, the people under their law. The Christian church was quite differently organized. From the miserable habitation of the serf, at the foot of the feudal castle, to the king's palace itself, everywhere there was a priest, a member of the clergy. The clergy was associated with all human conditions. This diversity in the situation of the Christian priests, this participation in all fortunes, has been a grand principle of union between the clergy and the laity, a

principle which has been wanting in most churches invested with power. The bishops and chiefs of the Christian clergy were, moreover, as you have seen, engaged in the feudal organization, and were members, at one and the same time, of a civil and of an ecclesiastical hierarchy. Hence it was that the same interests, habits and manners, became common to both the civil and religious orders. There has been much complaint, and with good reason, of bishops who have gone to war, of priests who have led the life of laymen. Of a verity, it was a great abuse, but still an abuse far less grievous than was, elsewhere, the existence of those priests who never left the temple, and whose life was totally separated from that of the community. Bishops, in some way mixed up in civil discords, were far more serviceable than the priests who were total strangers to the population, to all its affairs and its manners. Under this connection there was established between the clergy and the Christian people a parity of destiny and situation which, if it did not correct, at least lessened the evil of the separation between the governing and the governed.

This separation being once admitted, and its limits determined (the attainment of which object I have just attempted), let us investigate the manner in which the Christian church was governed, and in what way it acted upon the people under its command. On the one hand, how it tended to the development of man, and the internal progress of the individual; and on the other, how it tended to the amelioration of the social condition.

As regards the development of the individual, I do not think, correctly speaking, that, at the epoch under consideration, the church troubled itself much in the matter; it endeavored to inspire the powerful of the world with milder sentiments, and with more justice in their relations with the weak; it maintained in the weak a moral life, together with sentiments and desires of a more elevated order than those to which their daily destiny condemned them. Still, for the development of the individual, properly so called, and for increasing the worth of man's personal nature, I do not think that at this period the church did much, at all events not among the laity. What it did effect was confined to the ecclesiastical society; it concerned itself much with the development of the clergy, and the instruction of the priests; it had for them schools, and all the institutions which the deplorable state of society permitted. But they were ecclesiastical schools destined only for the instruction of the clergy; beyond this, the church acted only indirectly and by very dilatory means upon the progress of ideas and manners. It doubtless provoked general activity of mind, by the career which it opened to all those whom it judged capable of serving

it ; but this was all that it did at this period toward the intellectual development of the laity.

It worked more, I believe, and that in a more efficacious manner, toward the amelioration of social society. There can be no doubt that it struggled resolutely against the great vices of the social state, against slavery, for instance. It has often been repeated, that the abolition of slavery among modern people is entirely due to Christians. That, I think, is saying too much ; slavery existed for a long period in the heart of Christian society without it being particularly astonished or irritated. A multitude of causes, and a great development in other ideas and principles of civilization were necessary for the abolition of this iniquity of all iniquities. It cannot be doubted, however, that the church exerted its influence to restrain it. We have an undeniable proof of this. The greater part of the forms of enfranchisement, at various epochs, were based upon religious principles ; it is in the name of religious ideas, upon hopes of the future, and upon the religious equality of mankind, that enfranchisement has almost always been pronounced.

The church worked equally for the suppression of a crowd of barbarous customs, and for the amelioration of the criminal and civil legislation. You know how monstrous and absurd this legislation then was, despite some principles of liberty in it ; you also know what ridiculous proofs, such as judicial combat, and even the simple oaths of a few men, were considered as the only means of arriving at the truth. The church endeavored to substitute in their stead more rational and legitimate means. I have already spoken of the difference which may be observed between the laws of the Visigoths, issued chiefly from the councils of Toledo, and other barbarous laws. It is impossible to compare them without being struck by the immense superiority of the ideas of the church in matters of legislation, justice and in all that interests the search for truth and the destiny of mankind. Doubtless many of these ideas were borrowed from the Roman legislation ; but had not the church preserved and defended them, if it had not worked their propagation, they would, doubtless, have perished. For example, as regards the employment of the oath in legal procedure, open the law of the Visigoths and you will see with what wisdom it is used :

“ Let the judge, that he may understand the cause, first interrogate the witnesses, and afterward examine the writings, to the end that the truth may be discovered with more certainty, and that the oath may not be needlessly administered. The search for truth requires that the writings on either side be carefully examined, and that the necessity for the oath, suspended over the heads of the parties, arrive unexpectedly. Let the oath be administered only in those cases when the judge can

discover no writings, proof, or other certain evidence of the truth." (*For. Jud.* l. ii. tit. i. 21.)

In criminal matters the relation between the punishments and the offences is determined according to philosophical and moral notions, which are very just. One may there recognize the efforts of an enlightened legislator struggling against the violence and want of reflection of barbarous manners. The chapter, *De cæde et morte hominum*, compared with laws corresponding thereto in other nations, is a very remarkable example. Elsewhere it is the damage done which seems to constitute the crime, and the punishment is sought in the material reparation of pecuniary composition. Here the crime is reduced to its true, veritable and moral element, the intention. The various shades of criminality, absolutely involuntary homicide, homicide by inadvertency, provoked homicide, homicide with or without premeditation, are distinguished and defined nearly as correctly as in our codes, and the punishments vary in just proportion. The justice of the legislator went still further. He has attempted, if not to abolish, at least to lessen the diversity of legal value established among men by the laws of barbarism. The only distinction which he kept up was that of the free man and the slave. As regards free men, the punishment varies neither according to the origin nor the rank of the deceased, but solely according to the various degrees of moral culpability of the murderer. With regard to slaves, although not daring to deprive the master of all right to life and death, he at least attempted to restrain it by subjecting it to a public and regular procedure. The text of the law deserves citation :

"If no malefactor or accomplice in a crime should go unpunished, with how much more reason should we condemn those who have committed homicide lightly and maliciously ! Therefore, as masters, in their pride, often put their slaves to death, without fault on their part, it is right that this license should be entirely extirpated, and we ordain that the present law be perpetually observed by all. No master or mistress can put to death without public trial any of their male or female slaves, nor any person dependent upon them. If a slave, or any other servant, shall commit any crime which will render him liable to capital punishment, his master, or accuser, shall immediately inform the judge, or the count, or the duke, of the place where the crime was committed. After an investigation into the affair, if the crime be proved, let the culprit undergo, either through the judge or his own master, the sentence of death which he merits : provided, however, that if the judge will not put the accused to death, he shall draw up a capital sentence against him in writing ; and then it shall be in the power of the master either to kill him or spare his life. At the same time,

if the slave, by a fatal audacity, resisting his master, shall strike, or attempt to strike, him with a weapon or stone, and if the master, while defending himself, should kill the slave in his rage, the master shall not receive the punishment due to a homicide; but it must be proved that this really was the fact, and that, by the testimony or oath of the slaves, male or female, who may have been present, and by the oath of the author of the deed himself. Whoever, in pure malice, whether with his own hand or by that of another, shall kill his slave without public judgment, shall be reckoned infamous and declared incapable of bearing testimony, and shall pass the remainder of his life in exile or penitence, and his goods shall fall to his nearest heir to whom the law accords the inheritance." (*For. Jud.* l. vi. tit. v. l. 12.)

There is one fact in the institutions of the church which is generally not sufficiently remarked; it is the penitential system, a system so much the more curious to study in the present day from its being, as regards the principles and applications of the penal law, exactly in accordance with the ideas of modern philosophy. If you study the nature of the punishments of the church, and the public penances which were its principal mode of chastisement, you will see that the chief object is to excite repentance in the soul of the culprit and moral terror in the beholders by the example. There was also another idea mixed with it, that of expiation. I know not, as a general thing, if it be possible to separate the idea of expiation from that of punishment, and whether there is not in all punishment, independently of the necessity of provoking repentance in the culprit and of deterring those who might be tempted to become so, a secret and imperious want to expiate the wrong committed. But, leaving aside this question, it is evident that repentance and example are the ends proposed by the church in its whole penitential system. Is not this also the end of a truly philosophical legislation? Is it not in the name of these principles that the most enlightened jurists of this and the past century have advocated the reform of the European penal legislation? Open their works, those of Bentham, for instance, and you will be surprised by all the resemblances which you will meet with between the penal means therein proposed and those employed by the church. They certainly did not borrow them from her, nor could she have foreseen that one day her example would be invoked to aid the plans of the least devout of philosophers. Lastly, she strove by all sorts of means to restrain violence and continual warfare in society. Every one knows what was the *truce of God*, and numerous measures of a similar kind, by which the church struggled against the employment of force and strove to introduce more order and gentleness into society.

These facts are so well known that it is needless for me to enter into details. Such are the principal points which I have to place before you concerning the relations between the church and the people. We have considered it under the three aspects which I first announced; and have gained an inward and outward knowledge of it, both in its internal constitution and its two-fold position. It now remains for us to deduct from our knowledge, by means of induction and conjecture, its general influence upon European civilization. This, if I mistake not, is a work almost completed, or at least far advanced; the simple announcement of the dominant facts and principles in the church show and explain its influence; the results have, in some measure, already passed before your eyes with the causes. If, however, we attempt to recapitulate them, we shall, I think, be led to two general assertions.

The first is, that the church must have exercised a very great influence upon the moral and intellectual orders in modern Europe, upon public ideas, sentiments and manners.

The fact is evident; the moral and intellectual development of Europe has been essentially theological. Survey history from the fifth to the twelfth centuries; it is theology that possessed and directed the human spirit; all opinions are impressed by theology; philosophical, political and historical questions are all considered under a theological point of view. So all-powerful is the church in the intellectual order, that even the mathematical and physical sciences are held in submission to its doctrines. The theological spirit is, in a manner, the blood which ran in the veins of the European world, down to Bacon and Descartes. For the first time, Bacon in England and Descartes in France carried intelligence beyond the path of theology.

The same fact is evident in all branches of literature; theological habits, sentiments and language are manifest at every step.

Upon the whole, this influence has been salutary; not only has it sustained and fertilized the intellectual movement in Europe, but the system of doctrines and precepts, under the name of which it implanted the movement, was far superior to anything with which the ancient world was acquainted. There was at the same time movement and progress.

The situation of the church, moreover, gave an extent and a variety to the development of the human mind in the modern world which it had not possessed previously. In the east, intellect is entirely religious; in Greek society, it is exclusively human; in the one, humanity, properly so called—that is, its actual nature and destiny, vanishes; in the other, it is man himself, his actual passions, sentiments and interests which oc-

cupy the whole stage. In the modern world, the religious spirit is mixed up with everything, but it excludes nothing. Modern intellect has at once the stamp of humanity and of divinity. Human sentiments and interests occupy an important place in our literature; and yet the religious character of man, that portion of his existence which links him to another world, appears in every step; so that the two great sources of man's development—humanity and religion—have flowed at one time, and that abundantly; and despite all the evil and abuses with which it is mixed, despite many acts of tyranny, regarded in an intellectual point of view, the influence of the church has tended more to develop than compress, more to extend than to confine.

Under a political point of view, it is otherwise. There can be no doubt that in softening sentiments and manners, in crying down and exploding numerous barbarous customs, the church has powerfully contributed to the amelioration of the social state; but in the political order, properly so called, as regards the relations between the government and the subject, between power and liberty, I do not think that, upon the whole, her influence has been beneficial. Under this relation, the church has always presented itself as the interpreter and defender of two systems, the theocratic or the Roman Imperial system—that is, of despotism, sometimes under a religious, and sometimes under a civil form. Take all her institutions, and all her legislation; take her canons and procedure; and you will always find, as the dominant principle, theocracy or the empire. If weak, the church sheltered herself under the absolute power of the emperors; if strong, she claimed the same absolutism on her own account in the name of her spiritual power. We must not confine ourselves to particular facts or special instances. The church has, doubtless, often invoked the rights of the people against the bad government of the sovereigns; and often even approved of and provoked insurrection; has often maintained, in the face of the sovereign, the rights and interests of the people. But when the question of political guarantees has arisen between power and liberty, when the question was of establishing a system of permanent institutions, which might truly place liberty beyond the invasions of power, the church has generally ranged upon the side of despotism.

One need not be much astonished at this, nor charge the clergy with too great a degree of human weakness, nor suppose it a vice peculiar to the Christian church. There is a more profound and powerful cause. What does a religion pretend to? It pretends to govern the human passions and the human will. All religion is a restraint, a power, a government. It comes in the name of divine law for the purpose of subduing

human nature. It is human liberty, then, with which it chiefly concerns itself; it is human liberty which resists it, and which it wishes to overcome. Such is the enterprise of religion, such its mission and its hope.

It is true, that although human liberty is what religions concern themselves with, although they aspire to the reformation of the will of man, they have no moral means of acting upon him but through himself, by his own will. When they act by external means, by force, seduction, or any means, in fact, which are foreign to the free concurrence of man, when they treat him as they would water or wind, as a material power, they do not attain their end, they neither reach nor govern the human will. For religions to accomplish what they attempt, they must make themselves acceptable to liberty itself; it is needful that man should submit, but he must do so voluntarily and freely, and must preserve his liberty in the very heart of his submission. This is the double problem which religions are called upon to solve.

This they have too often overlooked; they have considered liberty as an obstacle, not as a means; they have forgotten the nature of the force to which they address themselves, and have treated the human soul as they would a material force. It is in following this error that they have almost always been led to range themselves on the side of power and despotism against human liberty, regarding it only as an adversary, and taking more pains to subdue than to secure it. If religions had turned their means of action to good account, if they had not allowed themselves to be carried away by a natural but deceitful inclination, they would have seen that it is necessary to guarantee liberty in order to regulate it morally; that religion cannot, nor ought to act except by moral means; they would have respected the will of man in applying themselves to govern it. This they have too often forgotten, and religious power has ended in itself suffering as much as liberty.

I will go no further in the examination of the general consequence of the influence of the church upon European civilization. I have recapitulated them in this twofold result; a great and salutary influence upon the social and moral order, an influence rather unfortunate than beneficial on the political order, properly so called. We have now to verify our assertions by facts, to verify by history that which we have deduced from the mere nature and situation of the ecclesiastical society. Let us see what was the fate of the Christian church from the fifth to the twelfth century, and whether the principles which I have placed before you, and the results which I have attempted to draw from them, were really developed as I have ventured to describe.

You should be careful not to suppose that these principles and consequences have appeared at the same periods, and with the same distinctness that I have represented them. It is a great and too common an error, when considering the past at the distance of many centuries, to forget the moral chronology, to forget (singular obliviousness!) that history is essentially successive. Take the life of a man, of Cromwell, Gustavus Adolphus or Cardinal Richelieu. He enters upon his career, he moves and progresses; he influences great events, and he in his turn is influenced by them; he arrives at the goal. We then know him, but it is in his whole; it is, as it were, such as he has issued after much labor from the workshop of Providence. But at starting he was not what he has thus become; he has never been complete and finished at any single period of his life; he has been formed progressively. Men are formed morally as physically; they change daily; their being modifies itself without ceasing; the Cromwell of 1650 was not the Cromwell of 1640. There is always a groundwork of individuality; it is always the same man who perseveres; but how changed are his ideas, sentiments and will! What things has he lost and acquired! At whatever moment we look upon the life of man there is no time when it has been what we shall see it when its term is attained.

It is here, however, that most historians have fallen into error; because they have gained one complete idea of man they see him such throughout the whole course of his career. For them, it is the same Cromwell who enters parliament in 1628, and who dies thirty years afterward in the palace of Whitehall. And with regard to institutions and general influences, they incessantly commit the same error. Let us guard against it. I have represented to you the principles of the church in their entirety, and the development of the consequences. But remember that historically the picture is not correct; all has been partial and successive, cast here and there over space and time. We must not expect to find this uniformity, this prompt and systematic connection, in the recital of facts. Here we shall see one principle springing up, there another; all will be incomplete, unequal and dispersed. We must come to modern times, to the end of the career, before we shall find the entire result. I shall now place before you the various states through which the church passed between the fifth and the twelfth century. We cannot collect an entire demonstration of the assertions which I have placed before you, but we shall see sufficient to enable us to presume they are legitimate.

The first condition in which the church appears at the fifth century is the imperial state, the church of the Roman Empire. When the Roman Empire was on the decline the church

thought herself at the term of her career, and that her triumph was accomplished. It is true she had completely vanquished paganism. The last emperor who took the rank of sovereign pontiff, which was a pagan dignity, was the emperor Gratian, who died at the end of the fourth century. Gratian was called sovereign pontiff, like Augustus and Tiberius. The church likewise thought herself at the end of her struggle with the heretics, especially with the Arians, the chief heretics of the day. The Emperor Theodosius, toward the end of the fourth century, instituted against them a complete and severe legislation. The church then enjoyed the government and the victory over its two most formidable enemies. It was at this moment that she saw the Roman Empire fail her, and found herself in the presence of other pagans and heretics, in the presence of barbarians, Goths, Vandals, Burgundians and Franks. The fall was immense. You may easily conceive the lively attachment for the empire which must have been preserved in the bosom of the church. Thus we see her strongly adhering to what remained of it—to the municipal system and to absolute power. And when she had converted the barbarians, she attempted to resuscitate the empire; she addressed herself to the barbarous kings, conjured them to become Roman emperors, to take all the rights belonging to them, and enter into the same relations with the church as that which she had maintained with the Roman Empire. This was the work of the bishops between the fifth and sixth centuries, the general state of the church.

This attempt could not be successful; there were no means of reforming the Roman society with barbarians. Like the civil world, the church herself fell into barbarism. This was its second state. When one compares the writings of the ecclesiastical chroniclers of the eighth century with those of preceding ages, the difference is immense. Every wreck of Roman civilization had disappeared, even the language; everything felt itself, as it were, cast into barbarism. On the one hand, barbarians entered the clerical order, and became priests and bishops; and, on the other hand, the bishops adopted a life of barbarism, and without quitting their bishoprics, placed themselves at the head of bands, overrunning the country, pillaging, and making war, like the companions of Clovis. You will find in Gregory of Tours mention of several bishops, among others Salonus and Sagittarius, who thus passed their lives.

Two important facts developed themselves in the bosom of this barbarous church. The first is the separation of the spiritual and temporal power. This principle took its rise at this epoch. Nothing could be more natural. The church not having succeeded in resuscitating the absolute power of the Roman

Empire, and sharing it herself, was forced to seek safety in independence. It was necessary that she should defend herself on all sides, for she was continually threatened. Each bishop and priest saw his barbarous neighbors incessantly interfering in the affairs of the church, to usurp her riches, lands and power; her only means of defence was to say, "The spiritual order is totally separate from the temporal; you have not the right to interfere in its affairs." This principle, above all others, became the defensive arm of the church against barbarism.

A second important fact belonged to this epoch, the development of the monastic order in the west. It is known that at the commencement of the sixth century, St. Benedict instituted his order among the monks of the west, who were then trifling in number, but who have since prodigiously increased. The monks at this epoch were not members of the clergy; they were still regarded as laymen. No doubt priests, or even bishops, were sought for among them; but it was only at the end of the fifth and the beginning of the sixth century that the monks in general were considered as forming a part of the clergy, properly so called. We then find that priests and bishops became monks, believing that by so doing they made a fresh progress in religious life. Thus the monastic order in Europe took all at once a great development. The monks struck the fancy of the barbarians far more than the secular clergy. Their number was as imposing as their singularity of life. The secular clergy, the bishop or simple priest, were common to the imagination of the barbarians, who were accustomed to see, maltreat and rob them. It was a much more serious affair to attack a monastery, where so many holy men were congregated in one holy place. The monasteries, during the barbaric epoch, were an asylum for the church, as the church was for the laity. Pious men there found a refuge, as in the east they sheltered themselves in the Thebaid, to escape a worldly life and the temptations of Constantinople.

Such are the two great facts in the history of the church, which belong to the barbaric epoch; on one side the development of the principle of separation between the spiritual and temporal power; on the other, the development of the monastic system in the west.

Toward the end of the barbaric epoch, there was a new attempt to resuscitate the Roman Empire made by Charlemagne. The church and the civil sovereign again contracted a close alliance. This was an epoch of great docility, and hence one of great progress for papacy. The attempt again failed, and the empire of Charlemagne fell; but the advantages which the

church had gained from his alliance still remained with her. Papacy found herself definitely at the head of Christianity.

On the death of Charlemagne, chaos recommenced; the church again fell into it as well as civil society, and only left it to enter the frame of feudalism. This was its third state. By the dissolution of the empire of Charlemagne, there happened almost the same thing in the ecclesiastical order as in the civil order; all unity disappeared, all became local, partial, and individual. There then commenced in the situation of the clergy a struggle which it had never experienced before. This was the struggle between the sentiments and interests of the fief-holder and the sentiments and interests of the priest. The chiefs of the church were placed between these two positions, each tended to overcome the other; the ecclesiastical spirit was no longer so powerful or so universal; individual interest became more influential, and the desire for independence and the habits of a feudal life, loosened the ties of the ecclesiastical hierarchy. There was then made in the bosom of the church an attempt to remedy the effects of this relaxation. They sought in various quarters, by a system of federation, and by communal assemblies and deliberations, to organize national churches. It is at this epoch, and under the feudal system, that we find the greatest number of councils, convocations, and ecclesiastical assemblies, both provincial and national. It was in France, more especially, that this attempt at unity seemed followed with the greatest ardor. Hincmar, archbishop of Rheims, may perhaps be considered as the representative of this idea. His constant care was to organize the French church; he sought and put in force all the means of correspondence and union which might bring back some unity into the feudal church. We find Hincmar maintaining on the one side the independence of the church with regard to its temporal power, and on the other its independence with regard to papacy; it was he who, knowing that the pope wished to come into France, and threatened the bishops with excommunication, said, *Si excommunicaturus venerit, excommunicatus abibit*. But this attempt to organize the feudal church succeeded no better than the attempt to organize the imperial church had done. There were no means of establishing unity in this church. Its dissolution was always increasing. Each bishop, prelate and abbot isolated himself more and more within his diocese or his monastery. The disorder increased from the same cause. This was the time of the greatest abuses of simony, of the entirely arbitrary disposition of ecclesiastical benefices, and of the greatest looseness of manners among the priests. This disorder greatly shocked the people and the better portion of the clergy. We thence see at an early time, a

certain spirit of reform appear in the church, and the desire to seek some authority which could rally all these elements, and impose law upon them. Claude, bishop of Turin, and Agobard, archbishop of Lyons, originated in their dioceses some attempts of this nature, but they were not in a condition to accomplish such a work. There was within the whole church but one force adequate to it, and that was the court of Rome, the papacy. It was, therefore, not long ere it prevailed. The church passed during the course of the eleventh century into its fourth state, that of the theocratical or monastical church. The creator of this new form of church, in so far as a man can create, was Gregory VII.

We are accustomed to represent to ourselves Gregory VII as a man who wished to render all things immovable, as an adversary to intellectual development and social progress, and as a man who strove to maintain the world in a stationary or retrograding system. Nothing can be so false. Gregory VII was a reformer upon the plan of despotism, as were Charlemagne and Peter the Great. He, in the ecclesiastical order, was almost what Charlemagne in France and Peter the Great in Russia were in the civil order. He wished to reform the church, and through the church to reform society, to introduce therein more morality, more justice, and more law—he wished to effect this through the holy see, and to its profit.

At the same time that he strove to subject the civil world to the church, and the church to papacy, with an aim of reform and progress, and not one of immobility or retrogression, an attempt of the same kind and a similar movement was produced in the heart of monasteries. The desire for order, discipline and moral strictness, was zealously shown. It was at this period that Robert de Molême introduced a severe order at Cîteaux. This was the age of St. Norbert and the reform of the prebendaries, of the reform of Cluni, and lastly, of the great reform of St. Bernard. A general ferment reigned in the monasteries; the old monks defended themselves, declared it to be an injurious thing, said that their liberty was in danger, that the manners of the times must be complied with, that it was impossible to return to the primitive church, and treated all the reformers as madmen, dreamers and tyrants. Open the history of Normandy, by Orderic Vital, and you will continually meet with these complaints.

All therefore seemed tending to the advantage of the church, to its unity and power. While papacy sought to seize upon the government of the world, and while monasteries reformed themselves in a moral point of view, some powerful though isolated men claimed for human reason its right to be considered as something in man, and its right to interfere in his

opinions. The greater part of them did not attack received doctrines nor religious creeds; they only said that reason had a right to test them, and that it did not suffice that they should be affirmed upon authority. John Erigena, Roscelin and Abailard were the interpreters through whom reason once more began to claim her inheritance; these were the first authors of the movement of liberty which is associated with the movement of reform of Hildebrand and St. Bernard. When we seek the dominant character of this movement, we find that it is not a change of opinion, or a revolt against the system of public creeds—it is simply the right of reasoning claimed on the behalf of reason. The pupils of Abailard asked him, as he himself tells us in his *Introduction to Theology*, “for philosophical argument calculated to satisfy the reason, supplicating him to instruct them, not to repeat what he taught them, but to understand it; because nothing can be believed without being understood, and it is ridiculous to preach things which neither he who professes, nor those whom he teaches, can understand. . . . To what purpose were the study of philosophy, if not to lead to the study of God, to whom all things should be referred? With what view are the faithful permitted to read the writings which treat of the age and the books of the Gentiles, unless to prepare them for understanding the Holy Scriptures, and the necessary capacity for defending them? In this view it is especially necessary to be aided with all the force of reason, so as to prevent, upon questions so difficult and complicated as are those which form the object of the Christian faith, the subtleties of its enemies from easily contriving to adulterate the purity of our faith.”

The importance of this first attempt at liberty, this regeneration of the spirit of inquiry, was soon felt. Although occupied in reforming herself, the church did not the less take the alarm. She immediately declared war against these new reformers, whose methods menaced her more than their doctrines.

This is the great fact which shone forth at the end of the eleventh and beginning of the twelfth century, at the time when the state of the church was that of the theocratical or monastic. At this epoch, for the first time, there arose a struggle between the clergy and the free-thinkers. The quarrels of Abailard and St. Bernard, the councils of Soissons and Sens, where Abailard was condemned, are nothing but the expression of this fact, which holds so important a position in the history of modern civilization. It was the principal circumstance in the state of the church in the twelfth century, at the point at which we shall now leave it.

At the same time a movement of a different nature was produced, the movement for the enfranchisement of the boroughs.

Singular inconsistency of rude and ignorant manners! If it had been said to the citizens who conquered their liberty with so much passion, that there were men who claimed the rights of human reason, the right of free inquiry—men whom the church treated as heretics—they would have instantly stoned or burnt them. More than once did Abailard and his friends run this risk. On the other hand, those very writers who claimed the rights of human reason, spoke of the efforts for the enfranchisement of the boroughs as of an abominable disorder, and overthrow of society. Between the philosophical and the communal movement, between the political and rational enfranchisement, war seemed to be declared. Centuries were necessary to effect the reconciliation of these two great powers, and to make them understand that their interests were in common. At the twelfth century they had nothing in common.

SEVENTH LECTURE.

WE have conducted, down to the twelfth century, the history of the two great elements of civilization, the feudal system and the church. It is the third of these fundamental elements, I mean the boroughs, which now we have to trace likewise down to the twelfth century, confining ourselves to the same limits which we have observed in the other two.

We shall find ourselves differently situated with regard to the boroughs, from what we were with regard to the church or the feudal system. From the fifth to the twelfth century, the feudal system and the church, although at a later period they experienced new developments, showed themselves almost complete, and in a definitive state; we have watched their birth, increase and maturity. It is not so with the boroughs. It is only at the end of the epoch which now occupies us, in the eleventh and twelfth centuries, that they take up any position in history; not but that before then they had a history which was deserving of study; nor is it that there were not long before this epoch traces of their existence; but it was only at the eleventh century that they became evidently visible upon the great scene of the world, and as an important element of modern civilization. Thus, in the feudal system and the church, from the fifth to the twelfth century, we have seen the effects born and developed from the causes. Whenever, by way of induction or conjecture, we have deduced certain principles and results, we have been able to verify them by an inquiry into the facts themselves. As regards the boroughs, this facility fails us; we are present only at their birth. At present I must confine myself to causes and origins. What I say concerning the effects of the existence of the boroughs, and their influence in the course of European civilization, I shall say in some measure by way of anticipation. I cannot invoke the testimony of contemporaneous and known facts. It is at a later period, from the twelfth to the fifteenth century, that we shall see the boroughs taking their development, the institution bearing all its fruit, and history proving our assertions. I dwell upon this difference of situation in order to anticipate your objections against the incompleteness and

prematurity of the picture which I am about to offer you. I will suppose that in 1789, at the time of the commencement of the terrible regeneration of France, a burgher of the twelfth century had suddenly appeared among us, and that he had been given to read, provided he knew how, one of the pamphlets which so powerfully agitated mind; for example, the pamphlet of M. Sieyès—"Who is the third estate?" His eyes fall upon this sentence, which is the foundation of the pamphlet: "The third estate is the French nation, less the nobility and the clergy." I ask you, what would be the effect of such a phrase upon the mind of such a man? Do you suppose he would understand it? No, he could not understand the words, *the French nation*, because they would represent to him no fact with which he was acquainted, no fact of his age; and if he understood the phrase, if he clearly saw in it this sovereignty attributed to the third estate above all society, of a verity it would appear to him mad, impious, such would be its contradiction to all that he had seen, to all his ideas and sentiments.

Now, ask this astonished burgher to follow you: lead him to one of the French boroughs of this epoch, to Rheims, Beauvais, Laon, or Noyon; a different kind of astonishment would seize him: he enters a town; he sees neither towers nor ramparts, nor burgher militia; no means of defence; all is open, all exposed to the first comer, and the first occupant. The burgher would doubt the safety of this borough; he would think it weak and ill-secured. He penetrates into the interior, and inquires what is passing, in what manner it is governed, and what are its inhabitants. They tell him that beyond the walls there is a power which taxes them at pleasure without their consent; which convokes their militia and sends it to war without their voice in the matter. He speaks to them of magistrates, of the mayor, and of the aldermen; and he hears that the burghers do not nominate them. He learns that the affairs of the borough are not decided in the borough; but that a man belonging to the king, an intendant, administers them, alone and at a distance. Furthermore, they will tell him that the inhabitants have not the right of assembling and deliberating in common upon matters which concern them; that they are never summoned to the public place by the bell of their church. The burgher of the twelfth century would be confounded. First, he was stupefied and dismayed at the grandeur and importance that the communal nation, the third estate, attributed to itself; and now he finds it on its own hearthstone in a state of servitude, weakness, and nonentity, far worse than any thing which he had experienced. He passes from one spectacle to another utterly different, from

the view of a sovereign burghership to that of one entirely powerless. How would you have him comprehend this,—reconcile it, so that his mind be not overcome?

Let us burghers of the nineteenth century go back to the twelfth and be present at an exactly corresponding double spectacle. Whenever we regard the general affairs of a country, its state, its government, the whole society, we shall see no burghers, hear, speak of none; they interfere in nothing, and are quite unimportant. And not only have they no importance in the state, but if we would know what they think of their situation, and how they speak of it, and what their position in regard to their relation with the government of France in general is in their own eyes, we shall find in their language an extraordinary timidity and humility. Their ancient masters, the lords, from whom they forced their franchises, treat them, at least in words, with a haughtiness which confounds us; but it neither astonishes nor irritates them.

Let us enter into the borough itself; let us see what passes there. The scene changes; we are in a kind of fortified place defended by armed burghers: these burghers tax themselves, elect their magistrates, judge and punish, and assemble for the purpose of deliberating upon their affairs. All come to these assemblies; they make war on their own account against their lord; and they have a militia. In a word, they govern themselves; they are sovereigns. This is the same contrast which in the France of the eighteenth century so much astonished the burghers of the twelfth; it is only the parts that are changed. In the latter, the burgher nation is all, the borough nothing; in the former, the burghership is nothing, the borough everything.

Assuredly, between the twelfth and the eighteenth century, many things must have passed—many extraordinary events, and many revolutions have been accomplished, to bring about, in the existence of a social class, so enormous a change. Despite this change, there can be no doubt but that the third estate of 1789 was, politically speaking, the descendant and heir of the corporations of the twelfth century. This French nation, so haughty and ambitious, which raises its pretensions so high, which so loudly proclaims its sovereignty, which pretends not only to regenerate and govern itself, but to govern and regenerate the world, undoubtedly descends, principally at least, from the burghers who obscurely though courageously revolted in the twelfth century, with the sole end of escaping in some corner of the land from the obscure tyranny of the lords.

Most assuredly it is not in the state of the boroughs in the twelfth century that we shall find the explanation of such a metamorphosis: it was accomplished and had its causes in the

events which succeeded it from the twelfth to the eighteenth century; it is there that we shall meet it in its progression. Still the origin of the third estate has played an important part in its history; although we shall not find there the secret of its destiny, we shall, at least, find its germ: for what it was at first is again found in what it has become, perhaps, even to a greater extent than appearances would allow of our presuming. A picture, even an incomplete one, of the state of the boroughs in the twelfth century, will, I think, leave you convinced of this.

The better to understand this state, it is necessary to consider the boroughs from two principal points of view. There are two great questions to resolve; the first, that of the enfranchisement of the boroughs itself—the question how the revolution was operated, and from what causes—what change it brought into the situation of the burghers, what effect it has had upon society in general, upon the other classes and upon the state. The second question relates only to the government of the boroughs, the internal condition of the enfranchised towns, the relations of the burghers among themselves, and the principles, forms and manners which dominated in the cities.

It is from these two sources, on the one hand, from the change introduced into the social condition of the burghers, and on the other, from their internal government and their communal condition, that all their influence upon modern civilization originated. There are no facts produced by this influence but which should be referred to one or other of these causes. When, therefore, we shall have summed them up, when we thoroughly understand, on one side, the enfranchisement of the boroughs, and on the other, the government of the boroughs, we shall be in possession, so to speak, of the two keys to their history.

Lastly, I shall say a word concerning the various state of the boroughs throughout Europe. The facts which I am about to place before you do not apply indifferently to all the boroughs of the twelfth century, to the boroughs of Italy, Spain, England, or France; there are certainly some which belong to all, but the differences are great and important. I shall point them out in passing; we shall again encounter them in a later period of civilization, and we will then investigate them more closely.

To understand the enfranchisement of the boroughs, it is necessary to recall to your minds what was the state of the towns from the fifth to the eleventh century—from the fall of the Roman Empire down to the commencement of the communal revolution. Here, I repeat, the differences were very great; the state of the towns varied prodigiously in the various

countries of Europe; still there are general facts which may be affirmed of almost all towns; and I shall try to confine myself to them. When I depart from this restriction, what I say more especially will apply to the boroughs of France, and particularly to the boroughs of the north of France, beyond the Rhone and the Loire. These will be the prominent points in the picture which I shall attempt to trace.

After the fall of the Roman Empire, from the fifth to the tenth century, the condition of the towns was one neither of servitude nor liberty. One runs the same risk in the employment of words that I spoke of the other day in the painting of men and events. When a society and a language has long existed, the words take a complete, determined and precise sense, a legal and official sense, in a manner. Time has introduced into the sense of each term a multitude of ideas which arise the moment that it is pronounced, and which, not belonging to the same date, are not applicable alike to all times. For example, the words *servitude* and *liberty* call to our minds in the present day ideas infinitely more precise and complete than the corresponding facts of the eighth, ninth or tenth centuries. If we say that, at the eighth century, the towns were in a state of liberty, we say far too much; in the present day we attach a sense to the word *liberty* which does not represent the fact of the eighth century. We shall fall into the same error if we say that the towns were in a state of servitude, because the word implies an entirely different thing from the municipal facts of that period.

I repeat that at that time the towns were neither in a state of servitude nor liberty; they suffered all the ills which accompany weakness; they were a prey to the violence and continual depredations of the strong; but yet, despite all these fearful disorders, despite their impoverishment and depopulation, the towns had preserved and did still preserve a certain importance: in most of them there was a clergy, a bishop, who by the great exercise of power, and his influence upon the population, served as a connecting link between them and their conquerors, and thus maintained the town in a kind of independence, and covered it with the shield of religion. Moreover, there remained in the towns many wrecks of Roman institutions. One meets at this epoch (and many facts of this nature have been collected by MM. de Savigny and Hullman, Mademoiselle de Lézardiére, etc.) with frequent convocations of the senate, of the curia; there is mention made of public assemblies and municipal magistrates. The affairs of the civil order, wills, grants and a multitude of acts of civil life, were legalized in the curia by its magistrates, as was the case in the Roman municipality. The remains of urban activity and

liberty, it is true, gradually disappeared. Barbarism, disorder and always increasing misfortunes accelerated the depopulation. The establishment of the masters of the land in the rural districts, and the growing preponderance of agricultural life, were new causes of decay to the towns. The bishops themselves, when they had entered the frame of feudalism, placed less importance on their municipal existence. Finally, when feudalism had completely triumphed, the towns, without falling into the servitude of serfs, found themselves entirely in the hands of a lord, inclosed within some fief, and robbed of all the independence which had been left to them, even in the most barbarous times, in the first ages of the invasion. So that from the fifth century down to the time of the complete organization of feudalism the condition of the towns was always upon the decline.

When once feudalism was thoroughly established, when each man had taken his place, and was settled upon his land, when the wandering life had ceased, after some time the towns again began to acquire some importance and to display anew some activity. It is, as you know, with human activity as with the fecundity of the earth; from the time that commotion ceases it reappears and makes everything germinate and flourish. With the least glimpse of order and peace man takes hope, and with hope goes to work. It was thus with the towns; the moment that feudalism was a little fixed new wants sprang up among the fief-holders, a certain taste for progress and amelioration; to supply this want a little commerce and industry reappeared in the towns of their domain; riches and population returned to them; slowly, it is true, but still they returned. Among the circumstances which contributed thereto, one, I think, is too little regarded; this is the right of sanctuary in the churches. Before the boroughs had established themselves, before their strength and their ramparts enabled them to offer an asylum to the afflicted population of the country, when as yet they had no safety but that afforded by the church, this sufficed to draw into the towns many unhappy fugitives. They came to shelter themselves in or around the church; and it was not only the case with the inferior class, with serfs and boors, who sought safety, but often with men of importance, rich outlaws. The chronicles of the time are filled with examples of this nature. One sees men, formerly powerful themselves, pursued by a more powerful neighbor, or even by the king himself, who abandon their domains, carrying with them all they can, shut themselves up within a town, and putting themselves under the protection of the church become citizens. These kind of refugees have not been, I think, without their influence upon the progress of the towns;

they introduced into them riches, and elements of a superior population to the mass of their inhabitants. Besides, who knows not that when once an association is in part formed, men flock to it, both because they find more safety and also for the mere sake of that sociability which never leaves them?

By the concurrence of all these causes, after the feudal government was in some manner regulated, the towns regained a little strength. Their security, however, did not return to them in the same proportion. The wandering life had ceased, it is true, but the wandering life had been for the conquerors, for the new proprietors of the soil, a principal means of satisfying their passions. When they had wished to pillage they made an excursion, they went to a distance to seek another fortune, another domain. When each was nearly established, when it became necessary to renounce this conquering vagrancy, there was no cessation of their avidity, their inordinate wants, nor their violent desires. Their weight then fell on the people nearest at hand, upon the towns. Instead of going to a distance to pillage, they pillaged at home. The extortions of the nobility upon the burgesses were redoubled from the commencement of the tenth century. Whenever the proprietor of a domain in which a town was situated had any fit of avarice to satisfy it was upon the burgesses that he exercised his violence. This, above all, was the epoch in which the complaints of the burgesses against the absolute want of security of commerce burst forth. The merchants, after having made their journeys, were not permitted to enter their towns in peace; the roads and approaches were incessantly beset by the lord and his followers. The time at which industry was recommencing was exactly that in which security was most wanting. Nothing can irritate a man more than being thus interfered with in his work, and despoiled of the fruits which he had promised himself from it. He is far more annoyed and enraged than when harassed in an existence which has been some time fixed and monotonous, when that which is carried from him has not been the result of his own activity, has not excited in his bosom all the pleasures of hope. There is, in the progressive movement toward fortune of a man or a population, a principle of resistance against injustice and violence far more energetic than in any other situation.

This, then, was the position of the towns during the tenth century; they had more strength, more importance, more riches, and more interests to defend. At the same time it was more than ever necessary to defend them, because this strength, these interests, these riches, became an object of envy to the lords. The danger and evil increased with the means of resisting them. Moreover, the feudal system gave to all those who

participated in it the example of continued resistance; it never presented to the mind the idea of an organized government, capable of ruling and quelling all by imposing its single intervention. It offered, on the contrary, the continuous spectacle of the individual will refusing submission. Such, for the most part, was the position of the possessors of fiefs toward their superiors, of the lesser lords toward the greater; so that at the moment when the towns were tormented and oppressed, when they had new and most important interests to sustain, at that moment they had before their eyes a continual lesson of insurrection. The feudal system has rendered one service to humanity, that of incessantly showing to men the individual will in the full display of its energy. The lesson prospered: in spite of their weakness, in spite of the infinite inequality of condition between them and their lords, the towns arose in insurrection on all sides.

It is difficult to assign an exact date to this event. It is generally said that the enfranchisement of the commons commenced in the eleventh century; but, in all great events, how many unhappy and unknown efforts occur before the one which succeeds! In all things, to accomplish its designs, Providence lavishly expends courage, virtues, sacrifices, in a word, man himself; and it is only after an unknown number of unrecorded labors, after a host of noble hearts have succumbed in discouragement, convinced that their cause is lost, it is only then that the cause triumphs. It doubtless happened thus with the commons. Doubtless, in the eighth, ninth and tenth centuries, there were many attempts at resistance, and movements toward enfranchisement, which not only were unsuccessful, but of which the memory remained alike without glory or success. It is true, however, that these attempts have influenced posterior events; they reanimated and sustained the spirit of liberty, and prepared the way for the great insurrection of the eleventh century.

I say designedly, insurrection. The enfranchisement of the commons in the eleventh century was the fruit of a veritable insurrection, and a veritable war, a war declared by the population of the towns against their lords. The first fact which is always met with in such histories, is the rising of the burghesses, who arm themselves with the first thing that comes to hand; the expulsion of the followers of the lord who have come to put in force some extortion; or it is an enterprise against the castle; these are always the characteristics of the war. If the insurrection fails, what is done by the conqueror? He orders the destruction of the fortification raised by the citizens, not only round the town but round each house. One sees at the time of the confederation, after having promised

to act in common, and after taking the oath of mutual aid, the first act of the citizen is to fortify himself within his house. Some boroughs, of which at this day the name is entirely obscure, as, for example, the little borough of Vezelay in Nivernois, maintained a very long and energetic struggle against their lord. Victory fell to the abbot of Vezelay; he immediately enjoined the demolition of the fortifications of the citizens' houses; the names of many are preserved whose fortified houses were thus immediately destroyed.

Let us enter the interior of the habitations of our ancestors; let us study the mode of their construction and the kind of life which they suggest; all is devoted to war, all has the character of war.

This is the construction of a citizen's house in the twelfth century, as far as we can follow it out: there were generally three floors, with one room upon each floor; the room on the ground floor was the common room, where the family took their meals; the first floor was very high up, by way of security; this is the most remarkable characteristic of the construction. On this floor was the room which the citizen and his wife inhabited. The house was almost always flanked by a tower at the angle, generally of a square form; another symptom of war, a means of defence. On the second floor was a room, the use of which is doubtful, but which probably served for the children, and the rest of the family. Above, very often, was a small platform, evidently intended for a place of observation. The whole construction of the house suggests war. This was the evident character, the true name of the movement which produced the enfranchisement of the commons.

When war has lasted a certain time, whoever may be the belligerent powers, it necessarily leads to peace. The treaties of peace between the commons and their adversaries were the charters. The borough charters are mere treaties of peace; between the burgesses and their lord.

The insurrection was general. When I say *general*, I do not mean that there was a union or coalition between all the citizens in a country; far from it. The situation of the commons was almost everywhere the same; they were everywhere a prey to the same danger, afflicted with the same evil. Having acquired almost the same means of resistance and defence, they employed them at nearly the same epoch. Example, too, may have done something, and the success of one or two boroughs may have been contagious. The charters seem sometimes to have been drawn after the same pattern; that of Noyon, for example, served as a model for those of Beauvais, St. Quentin, etc. I doubt, however, whether example had so

much influence as has been supposed. Communications were difficult and rare, and hearsay vague and transient; it is more likely that the insurrection was the result of a similar situation, and of a general and spontaneous movement. When I say general, I mean to say that it took place almost everywhere; for, I repeat, that the movement was not unanimous and concerted, all was special and local; each borough was insurgent against its lord upon its own account; all passed in its own locality.

The vicissitudes of the struggle were great. Not only did success alternate, but even when peace seemed established, after the charter had been sworn to by each party, it was violated and eluded in every way. The kings played a great part in the alternations of this struggle. Of this I shall speak in detail when I treat of royalty itself. Its influence in the movement of communal enfranchisement has been sometimes praised, perhaps too highly; sometimes, I think, too much undervalued, and sometimes denied. I shall confine myself at present to saying that it frequently interfered, sometimes invoked by the boroughs and sometimes by the lords; that it has often played contrary parts; that it has acted sometimes on one principle, sometimes on another; that it has unceasingly changed its intentions, designs, and conduct; but that, upon the whole, it has done much, and with more of good than of evil effect.

Despite these vicissitudes, despite the continual violations of charters, the enfranchisement of the boroughs was consummated in the twelfth century. All Europe, and especially France, which for a century had been covered with insurrections, was covered with charters more or less favorable; the corporations enjoyed them with more or less security, but still they enjoyed them. The fact prevailed, and the right was established.

Let us now attempt to discover the immediate results of this great fact, and what changes it introduced into the condition of the burgesses, in the midst of society.

In the first place, it changed nothing, at least not in the commencement, in the relations of the burgesses with the general government of the country—with what we of the present day call the state; they interfered no more in it than heretofore, all remained local, inclosed within the limits of the fief.

One circumstance, however, should modify this assertion, a bond now began to be established between the citizens and the king. At times the burgesses had invoked the aid of the king against their lord, or his guarantee, when the charter was promised or sworn to. At other times, the lords had invoked the judgment of the king between themselves and the

citizens. At the demand of either one or other of the parties, in a multitude of different causes, royalty had interfered in the quarrel; from thence resulted a frequent relation, and sometimes a rather intimate one, between the burgesses and the king. It was by this relation that the burgesses approached the center of the state, and began to have a connection with the general government.

Notwithstanding that all remained local, a new and general class was created by the enfranchisement. No coalition had existed between the citizens; they had, as a class, no common and public existence. But the country was filled with men in the same situation, having the same interests and the same manners, between whom a certain bond of unity could not fail of being gradually established, which should give rise to the *bourgeoisie*. The formation of a great social class, the bourgeoisie, was the necessary result of the local enfranchisement of the burghers.

It must not be imagined that this class was at this time that which it has since become. Not only has its situation changed, but its elements were entirely different: in the twelfth century it consisted almost entirely of merchants, traders carrying on a petty commerce, and of small proprietors, either of land or houses, who had taken up their residence in the town. Three centuries after, the bourgeoisie comprehended, besides, advocates, physicians, learned men of all sorts, and all the local magistrates. The bourgeoisie was formed gradually, and of very different elements; as a general thing, in its history no account is given of its succession or diversity. Wherever the bourgeoisie is spoken of, it seems to be supposed that at all epochs it was composed of the same elements. This is an absurd supposition. It is perhaps in the diversity of its composition at different epochs of history that we should look for the secret of its destiny. So long as it did not include magistrates nor men of letters, so long as it was not what it became in the sixteenth century, it possessed neither the same importance nor the same character in the state. To comprehend the vicissitudes of its fortune and power, it is necessary to observe in its bosom the successive rise of new professions, new moral positions, and a new intellectual state. In the twelfth century, I repeat, it was composed of only the small merchants, who retired into the towns after having made their purchases and sales, and of the proprietors of houses and small domains who had fixed their residence there. Here we see the European burgher class in its first elements.

The third great consequence of the enfranchisement of the commons was the contest of classes, a contest which constitutes the fact itself, and which fills modern history. Modern Europe

was born from the struggle of the various classes of society. Elsewhere, as I have already observed, this struggle led to very different results: in Asia, for example, one class completely triumphed, and the government of castes succeeded to that of classes, and society sunk into immobility. Thank God, none of this has happened in Europe. Neither of the classes has been able to conquer or subdue the others; the struggle, instead of becoming a principle of immobility, has been a cause of progress; the relations of the principal classes among themselves, the necessity under which they found themselves of combating and yielding by turns; the variety of their interests and passions, the desire to conquer without the power to satisfy it; from all this has arisen perhaps the most energetic and fertile principle of the development of European civilization. The classes have incessantly struggled; they detested each other; an utter diversity of situation, of interests, and of manners, produced between them a profound moral hostility: and yet they have progressively approached nearer, come to an understanding, and assimilated; every European nation has seen the birth and development in its bosom of a certain universal spirit, a certain community of interests, ideas, and sentiments, which have triumphed over diversity and war. In France, for example, in the seventeenth and eighteenth centuries, the social and moral separation of the classes was still very profound; yet the fusion was advancing; still, without doubt, at that time there was a veritable French nation, not an exclusive class, but which embraced them all, and in which all were animated by a certain sentiment in common, having a common social existence, strongly impressed, in a word, with nationality. Thus, from the bosom of variety, enmity and war has arisen in modern Europe the national unity so striking in the present day, and which tends to develop and refine itself, from day to day, with still greater brilliancy.

Such are the great, external, apparent and social effects of the revolution which at present occupies us. Let us investigate its moral effects, what changes it brought about in the soul of the citizens themselves, what they became, what, in fact, they necessarily became morally in their new situation.

There is a fact by which it is impossible not to be struck while contemplating the relation of the burghers toward the state in general, the government of the state, and the general interests of the country, not only in the twelfth century, but also in subsequent ages; I mean the prodigious timidity of the citizens, their humility, the excessive modesty of their pretensions as to the government of the country, and the facility with which they contented themselves. Nothing is seen among them of the true political spirit which aspires to influence,

reform and govern; nothing which gives proof of boldness of thought or grandeur of ambition; one might call them sensible-minded, honest, freed men.

There are but two sources in the sphere of politics from which greatness of ambition or firmness of thought can arise. It is necessary to have either the feeling of immense importance, of great power exercised upon the destiny of others, and in a vast extent—or else it is necessary to bear within one's self a feeling of complete individual independence, a confidence in one's own liberty, a conviction of a destiny foreign to all will but that of the man himself. To one or other of these two conditions seem to belong boldness of thought, greatness of ambition, the desire of acting in an enlarged sphere, and of obtaining great results.

Neither one nor the other of these conditions entered into the condition of the burghers of the middle ages. These, as you have just seen, were only important to themselves; they exercised no sensible influence beyond their own town, or upon the state in general. Nor could they have any great sentiment of individual independence. It was in vain that they conquered, in vain that they obtained a charter. The citizen of a town, in comparing himself with the inferior lord who dwelt near him, and who had just been conquered, was not the less sensible of his extreme inferiority; he was not filled with the haughty sentiment of independence which animated the proprietor of the fief; he held not his portion of liberty from himself alone, but from his association with others; a difficult and precarious succor. Hence that character of reserve, of timidity of spirit, of retiring modesty and humility of language, even in conjunction with a firmness of conduct, which is so deeply imprinted in the life of the citizens, not only in the twelfth century, but even of their descendants. They had no taste for great enterprises, and when fate forced them among them, they were uneasy and embarrassed; the responsibility annoyed them; they felt that they were out of their sphere of action, and wished to return to it; they therefore treated on moderate terms. Thus one finds in the course of European history, especially of France, that the bourgeoisie has been esteemed, considered, flattered, and even respected, but rarely feared; it has rarely produced upon its adversaries an impression of a great and haughty power, of a truly political power. There is nothing to be surprised at in this weakness of the modern bourgeoisie; its principal cause lay in its very origin, and in the circumstances of its enfranchisement, which I have just placed before you. A high ambition, independently of social conditions, enlargement and firmness of political thought, the desire to participate in the affairs of the country,

the full consciousness of the greatness of man as man, and of the power which belongs to him, if he is capable of exercising it, these are in Europe sentiments and dispositions entirely modern, the fruit of modern civilization, the fruit of that glorious and powerful universality which characterizes it, and which cannot fail of insuring to the public an influence and weight in the government of the country, which were always wanting, and necessarily so, to the burghers our ancestors.

On the other hand, they acquired and displayed, in the struggle of local interests which they had to maintain in their narrow stage, a degree of energy, devotedness, perseverance and patience which has never been surpassed. The difficulty of the enterprise was such, and such the perils which they had to strive against, that a display of unexampled courage was necessary. In the present day, a very false idea is formed of the life of the burghers in the twelfth and thirteenth centuries. You have read in one of the novels of Walter Scott, "Quentin Durward," the representation he has given of the burgomaster of Liège; he has made of him a regular burgher in a comedy, fat, indolent, without experience or boldness, and wholly occupied in passing his life easily. Whereas, the burghers of this period always had a coat of mail upon their breast, a pike in their hand; their life was as tempestuous, as warlike and as hardy as that of the lords with whom they fought. It was in these continual perils, in struggling against all the difficulties of practical life, that they acquired that manly character and that obstinate energy which is, in a measure, lost in the soft activity of modern times.

None of these social or moral efforts of the enfranchisement of the boroughs had attained their development in the twelfth century; it is in the following centuries that they distinctly appeared, and are easily discernible. It is certain, however, that the germ was laid in the original situation of the boroughs, in the manner of their enfranchisement, and the place then taken by the burghers in society. I was, therefore, right in placing them before you alone. Let us now investigate the interior of the borough of the twelfth century; let us see how it was governed, what principles and facts dominated in the relations of the citizens among themselves.

You will recollect that in speaking of the municipal system, bequeathed by the Roman Empire to the modern world, I told you that the Roman Empire was a great coalition of municipalities, formerly sovereign municipalities like Rome itself. Each of these towns had originally possessed the same existence as Rome, had once been a small independent republic, making peace and war, and governing itself as it thought proper. In proportion as they became incorporated with the

Roman Empire the rights which constitute sovereignty, the right of peace and war, the right of legislation, the right of taxation, etc., left each town and centred in Rome. There remained but one sovereign municipality, Rome, reigning over a large number of municipalities which had now only a civil existence. The municipal system changed its character; and instead of being a political government and a system of sovereignty, it became a mode of administration.

This was the great revolution which was consummated under the Roman Empire. The municipal system became a mode of administration, was reduced to the government of local affairs and the civic interests of the city. This was the condition in which the towns and their institutions were left at the fall of the Roman Empire. In the midst of the chaos and barbarism, all ideas, as well as facts, were in utter confusion; all the attributes of sovereignty and of the administration were confounded. These distinctions were no longer attended to. Affairs were abandoned to the course of necessity. There was a sovereign, or an administrator, in each locality, according to circumstances. When the towns rose in insurrection to recover some security, they took upon themselves the sovereignty. It was not in any way for the purpose of following out a political theory, nor from a feeling of their dignity; it was that they might have the means of resisting the lords against whom they rebelled that they appropriated to themselves the right of levying militia, of taxations for the purposes of war, of themselves nominating their chiefs and magistrates; in a word, of governing themselves. The government in the interior of the towns was the means of defence and security. Thus sovereignty re-entered the municipal system, from which it had been eradicated by the conquests of Rome. The boroughs again became sovereign. We have here the political character of their enfranchisement.

It does not follow that this sovereignty was complete. It always retained some trace of external sovereignty: sometimes the lord preserved to himself the right of sending a magistrate into the town, who took for his assessors the municipal magistrates; sometimes he possessed the right of receiving certain revenues; elsewhere a tribute was secured to him. Sometimes the external sovereignty of the community lay in the hands of the king.

The boroughs themselves having entered within the frame of feudalism had vassals, became suzerains, and by virtue of this title partly possessed themselves of the sovereignty which was inherent in the lord paramount. This caused a confusion between the rights which they had from their feudal position, and those which they had conquered by their insur-

rections; and under this double title the sovereignty belonged to them.

Thus we see, as far as can be judged from very deficient monuments, how government was administered, at least in the early ages in the interior of a borough. The totality of the inhabitants formed the assembly of the borough; all those who had sworn the borough oath (and whoever lived within the walls was obliged to do so) were convoked by the ringing of a bell to the general assembly. It was there that they nominated the magistrates. The number and form of the magistracy were very various. The magistrates being once nominated, the assembly was dissolved, and the magistrates governed almost alone, somewhat arbitrarily, and without any other responsibility than that of the new elections or popular riots, which were the chief mode of responsibility in those times.

You see that the internal organization of boroughs reduced itself to two very simple elements; the general assembly of the inhabitants, and a government invested with an almost arbitrary power, under the responsibility of insurrections and riots. It was impossible, principally from the state of manners, to establish a regular government, with veritable guarantees for order and duration. The greater portion of the population of the boroughs was in a state of ignorance, brutality and ferocity, which it would have been very difficult to govern. After a short time, there was almost as little security in the interior of the borough as there had formerly been in the relations between the burgher and the lord. There was formed, however, very quickly a superior bourgeoisie. You can easily comprehend the causes. The state of ideas and of social relations led to the establishment of industrial professions, legally constituted corporations. The system of privilege was introduced into the interior of boroughs, and from this a great inequality ensued. There was shortly everywhere a certain number of rich and important burghers, and a working population more or less numerous, which, in spite of its inferiority, had an important influence in the affairs of the borough. The boroughs were then divided into a high bourgeoisie and a population subject to all the errors and vices of a populace. The superior bourgeoisie found itself pressed between the immense difficulty of governing the inferior population, and the incessant attempts of the ancient master of the borough, who sought to re-establish his power. Such was its situation, not only in France but in all Europe, down to the sixteenth century. This perhaps has been the chief means of preventing the corporations, in most European nations, and especially in France, from possessing all the important political influence

which they might otherwise have had. Two principles carried on incessant warfare within them; in the inferior population, a blind, unbridled and ferocious spirit of democracy; and as a consequence, in the superior population, a spirit of timidity at making agreements, an excessive facility of conciliation, whether in regard to the king, the ancient lords, or in re-establishing some peace and order in the interior of the borough. Each of these principles could not but tend to deprive the corporation of any great influence in the state.

All these effects were not visible in the twelfth century; still, however, one might foresee them in the very character of the insurrection, in the manner of its commencement, and in the condition of the various elements of the communal population.

Such, if I mistake not, are the principal characteristics and the general results of the enfranchisement of the boroughs and of their internal government. I forewarn you that these facts were neither so uniform nor so universal as I have broadly represented them. There is great diversity in the history of boroughs in Europe. For example, in Italy and in the south of France, the Roman municipal system dominated; there was not merely so much diversity and inequality here as in the north, and the communal organization was much better, either by reason of the Roman traditions, or from the superior condition of the population. In the north the feudal system prevailed in the communal existence; there, all was subordinate to the struggle against the lords. The boroughs of the south were more occupied with their internal organization, amelioration and progress; they thought only of becoming independent republics. The destiny of the northern boroughs, in France particularly, showed themselves more and more incomplete and destined for less fine developments. If we glance at the boroughs of Germany, Spain and England, we shall find in them other differences. I shall not enter into these details; we shall remark some of them as we advance in the history of civilization. In their origin, all things are nearly confounded under one physiognomy; it is only by successive developments that variety shows itself. Then commences a new development which urges society toward free and high unity, the glorious end of all the efforts and wishes of the human race.

EIGHTH LECTURE.

I HAVE not as yet explained to you the complete plan of my course. I commenced by indicating its object; I then passed in review European civilization without considering it as a whole, without indicating to you at one and the same time the point of departure, the route, and the port, the commencement, the middle and the end. We have now, however, arrived at an epoch when this entire view, this general sketch of the region which we survey, has become necessary. The times which have hitherto occupied us in some measure explain themselves, or are explained by immediate and evident results. Those upon which we are about to enter would not be understood, nor even would they excite any lively interest, unless they are connected with even the most indirect and distant of their consequences.

In so extensive a study, moments occur when we can no longer consent to proceed while all before us is unknown and dark. We wish not only to know whence we have come and where we are, but also to what point we tend. This is what we now feel. The epoch to which we are approaching is not intelligible, nor can its importance be appreciated except by the relations which unite it to modern times. Its true meaning is not evident until a later period.

We are in possession of almost all the essential elements of European civilization. I say almost, because as yet I have not spoken to you of royalty. The decisive crisis of the development of royalty did not take place until the twelfth or even thirteenth century. It was not until then that the institution was really constituted, and that it began to occupy a definite place in modern society. I have, therefore, not treated of it earlier; it will form the subject of my next lecture. With this exception, I repeat, we have before us all the great elements of European civilization. You have beheld the birth of feudal aristocracy, of the church, the boroughs; you have seen the institutions which should correspond to these facts; and not only the institutions, but also the principles and ideas which these facts should raise up in the mind. Thus, while treating of feudalism, you were present at the cradle of the modern family, at the hearth of domestic life; you have com-

prehended, in all its energy, the sentiment of individual independence, and the place which it has held in our civilization. With regard to the church, you have seen the purely religious society rise up, its relations with the civil society, the theocratical principle, the separation of the spiritual and temporal powers, the first blows of persecutions, and the first cries of the liberty of conscience. The rising boroughs have shown you glimpses of an association founded upon altogether other principles than those of feudalism and the church, the diversity of the social classes, their struggles, the first and profound characteristics of modern burgher manners, timidity of spirit side by side with energy of soul, the demagogue spirit side by side with the legal spirit. In a word, all the elements which have contributed to the formation of European society, all that it has been, and, so to speak, all that it has suggested, have already met your view.

Let us now transport ourselves to the heart of modern Europe. I speak not of existing Europe, after the prodigious metamorphoses which we have witnessed, but of Europe in the seventeenth and eighteenth centuries. I ask you, do you recognize the society which we have just seen in the twelfth century? What a wonderful difference! I have already dwelt upon this difference as regards the boroughs. I afterward tried to make you sensible of how little the third estate of the eighteenth century resembled that of the twelfth. If we make the same essay upon feudalism and the church, we shall be struck with the same metamorphosis. There was no more resemblance between the nobility at the court of Louis XV and the feudal aristocracy, or between the church of Cardinal de Bernis and that of the Abbot Suger, than between the third estate of the eighteenth century and the bourgeoisie of the twelfth century. Between these two epochs, although already in possession of all its elements, society was entirely transformed.

I wish to establish clearly the general and essential character of this transformation. From the fifth to the twelfth century society contained all that I have described. It possessed kings, a lay aristocracy, a clergy, burghers, laborers, religious and civil powers—in a word, the germs of everything which is necessary to form a nation and a government, and yet there was neither government nor nation. Throughout the epoch upon which we are occupied there was nothing bearing a resemblance to a people, properly so called, nor to a veritable government, in the sense which the words have for us in the present day. We have encountered a multitude of particular forces, of special facts, and local institutions; but nothing general or public; no policy, properly so called, nor no true nationality.

Let us look, on the contrary, upon Europe of the seventeenth and eighteenth centuries; we shall everywhere see two leading figures present themselves upon the scene of the world, the government and the people. The action of a universal power upon the whole country, and the influence of the country upon the power which governs it, this is society, this is history: the relations of the two great forces, their alliance or their struggle, this is what history discovers and relates. The nobility, the clergy and the burghers, all these particular classes and forces, now only appear in a secondary rank, almost like shadows effaced by those two great bodies, the people and its government.

This, if I mistake not, is the essential feature which distinguishes modern from primitive Europe; this is the metamorphosis which was accomplished from the thirteenth to the sixteenth centuries.

It is then from the thirteenth to the sixteenth century, that is to say, in the period which we are about to enter upon, that the secret of this must be sought for; it is the distinctive character of this epoch that it was employed in converting primitive Europe into modern Europe; and hence its historical importance and interest. If it is not considered from this point of view, and unless we everywhere seek what has arisen from it, not only will it not be understood, but we shall soon be weary of and annoyed by it. Indeed, viewed in itself, and apart from its results, it is a period without character, a period when confusion continues to increase, without our being able to discover its causes, a period of movement without direction, and of agitation without result. Royalty, nobility, clergy, bourgeoisie, all the elements of social order seem to turn in the same circle, equally incapable of progress or repose. They make attempts of all kinds, but all fail; they attempt to settle governments and to establish public liberties; they even attempt religious reforms, but nothing is accomplished—nothing perfected. If ever the human race has been abandoned to a destiny, agitated and yet stationary, to labor incessant, yet barren of effect, it was between the thirteenth and the fifteenth centuries that such was the physiognomy of its condition and its history.

I know of but one work in which this physiognomy is truly shown, the "*Histoire des Ducs de Bourgogne*," by M. de Barante. I do not speak of the truth which sparkles in the descriptions of manners, or in the detailed recital of facts, but of that universal truth which makes the entire book a faithful image, a sincere mirror of the whole epoch, of which it at the same time shows the movement and the monotony.

Considered, on the contrary, in its relation to that which follows, as the transition from the primitive to the modern Europe,

this epoch brightens and becomes animated ; we discover in it a totality, a direction and a progress ; its unity and interest consist in the slow and secret work which is accomplished in it.

The history of European civilization may then be summed up into three grand periods : First, a period which I shall call the period of origins, of formation—a time when the various elements of our society freed themselves from the chaos, took being, and showed themselves under their native forms with the principles which animated them. This period extended nearly to the twelfth century. Second, the second period is a time of essay, of trial, of groping ; the various elements of the social order drew near each other, combined, and, as it were, felt each other, without the power to bring forth anything general, regular, or durable. This state was not ended, properly speaking, till the sixteenth century. Third, the period of development, properly so called, when society in Europe took a definite form, followed a determined tendency, and progressed rapidly and universally toward a clear and precise end. This commenced at the sixteenth century, and now pursues its course.

Such appears to me to be the spectacle of European civilization in its whole, and such I shall endeavor to represent it to you. It is the second period that we enter upon now. We have to seek in it the great crises and determinative causes of the social transformation which has been the result of it.

The crusades constitute the first great event which presents itself to us, which, as it were, opens the epoch of which we speak. They commenced at the eleventh century, and extended over the twelfth and thirteenth. Of a surety, a great event ; for since it was completed it has not ceased to occupy philosophic historians ; even before reading the account of it, all have foreseen that it was one of those events which change the condition of the people, and which it is absolutely necessary to study in order to comprehend the general course of facts.

The first characteristic of the crusades is their universality ; the whole of Europe joined in them—they were the first European event. Previously to the crusades, Europe had never been excited by one sentiment, or acted in one cause ; there was no Europe. The crusades revealed Christian Europe. The French formed the vanguard of the first army of crusaders ; but there were also Germans, Italians, Spaniards, and English. Observe the second, the third crusade ; all the Christian nations engaged in it. Nothing like it had yet been seen.

This is not all : just as the crusades form an European event, so in each country do they form a national event. All classes of society were animated with the same impression, obeyed the same idea, abandoned themselves to the same impulse. Kings, lords, priests, burghers, countrymen, all took the same part, the

same interest in the crusades. The moral unity of nations was shown—a fact as novel as the European unity.

When such events happen in the infancy of a people, at a time when men act freely and spontaneously, without premeditation, without political intention or combination, one recognizes therein what history calls heroic events—the heroic age of nations. In fact, the crusades constitute the heroic event of modern Europe—a movement at once individual and general, national, and yet unregulated.

That such was really their primitive character is verified by all documents, proved by all facts. Who were the first crusaders that put themselves in motion? Crowds of the populace, who set out under the guidance of Peter the Hermit, without preparation, without guides, and without chiefs, followed rather than guided by a few obscure knights; they traversed Germany, the Greek empire, and dispersed or perished in Asia Minor.

The superior class, the feudal nobility, in their turn became eager in the cause of the crusade. Under the command of Godefroi de Bouillon, the lords and their followers set out full of ardor. When they had traversed Asia Minor, a fit of indifference and weariness seized the chiefs of the crusaders. They cared not to continue their route; they united to make conquests and establish themselves. The common people of the army rebelled; they wished to go to Jerusalem—the deliverance of Jerusalem was the aim of the crusade; it was not to gain principalities for Raimond de Toulouse, nor for Bohemond, nor for any other, that the crusaders came. The popular, national and European impulsion was superior to all individual wishes; the chiefs had not sufficient ascendancy over the masses to subdue them to their interests. The sovereigns, who had remained strangers to the first crusade, were at last carried away by the movement, like the people. The great crusades of the twelfth century were commanded by kings.

I pass at once to the end of the thirteenth century. People still spoke in Europe of the crusades, they even preached them with ardor. The popes excited the sovereigns and the people—they held councils in recommendation of the Holy Land; but no one went there—it was no longer cared for. Something had passed into the European spirit and European society that put an end to the crusades. There were still some private expeditions. A few lords, a few bands, still set out for Jerusalem; but the general movement was evidently stopped; and yet it does not appear that either the necessity or the facility of continuing it had disappeared. The Moslems triumphed more and more in Asia. The Christian kingdom founded at Jerusalem had fallen into their hands. It was necessary to reconquer it; there were greater means of success than they had at the com-

mencement of the crusades; a large number of Christians were established, and still powerful, in Asia Minor, Syria and Palestine. They were better acquainted with the means of travelling and acting. Still nothing could revive the crusades. It was clear that the two great forces of society—the sovereigns on one side and the people on the other—were averse to it.

It has often been said that this was lassitude—that Europe was tired of thus falling upon Asia. We must come to an understanding upon this word *lassitude*, which is so often used upon similar occasions; it is strangely inexact. It is not possible that human generations can be weary with what they have never taken part in; weary of the fatigues undergone by their forefathers. Weariness is personal, it cannot be transmitted like a heritage. Men in the thirteenth century were not fatigued by the crusades of the twelfth, they were influenced by another cause. A great change had taken place in ideas, sentiments, and social conditions. There were no longer the same wants and desires. They no longer thought or wished the same things. It is these political or moral metamorphoses, and not weariness, which explain the different conduct of successive generations. The pretended lassitude which is attributed to them is a false metaphor.

Two great causes, one moral and the other social, threw Europe into the crusades. The moral cause, as you know, was the impulsion of religious sentiments and creeds. Since the end of the seventh century, Christianity had been struggling against Mahommedanism; it had conquered it in Europe after being dangerously menaced; it had succeeded in confining it to Spain. Thence also it still constantly strove to expel it. The crusades have been represented as a kind of accident, as an event unforeseen, unheard of, born solely of the recitals of pilgrims on their return from Jerusalem, and of the preaching of Peter the Hermit. It was nothing of the kind. The crusades were the continuation, the zenith of the grand struggle which had been going on for four centuries between Christianity and Mahommedanism. The theatre of this struggle had been hitherto in Europe; it was now transported into Asia. If I put any value upon those comparisons and parallels, into which some people delight at times to press, suitable or not, historical facts, I might show you Christianity running precisely the same career in Asia, and undergoing the same destiny as Mahommedanism in Europe. Mahommedanism was established in Spain, and had there conquered and founded a kingdom and principalities. The Christians did the same in Asia. They there found themselves with regard to Mahommedans in the same situation as the latter in Spain with regard to the Christians. The kingdom of Jerusalem and the kingdom of Grenada correspond to each other.

But these similitudes are of little importance. The great fact is the struggle of the two social and religious systems; and of this the crusades was the chief crisis. In that lies their historical character, the connecting link which attaches them to the totality of facts.

There was another cause, the social state of Europe in the eleventh century, which no less contributed to their outburst. I have been careful to explain why, between the fifth and the eleventh century, nothing general could be established in Europe. I have attempted to show how every thing had become local, how states, existences, minds, were confined within a very limited horizon. It was thus feudalism had prevailed. After some time an horizon so restricted did not suffice; human thought and activity desired to pass beyond the circle in which they had been confined. The wandering life had ceased, but not the inclination for its excitement and adventures. The people rushed into the crusades as into a new existence, more enlarged and varied, which at one time recalled the ancient liberty of barbarism as others opened out the perspective of a vast future.

Such, I believe, were the two determining causes of the crusades of the twelfth century. At the end of the thirteenth century neither of these causes existed. Men and society were so much changed that neither the moral impulsion nor the social need which had precipitated Europe upon Asia was any longer felt. I do not know if many of you have read the original historians of the crusades, or whether it has ever occurred to you to compare the contemporaneous chroniclers of the first crusades with those at the end of the twelfth and thirteenth centuries, for example, Albert d'Aix, Robert the Monk and Raymond d'Agiles, who took part in the first crusade, with William of Tyre and James de Vitry. When we compare these two classes of writers, it is impossible not to be struck by the distance which separates them. The first are animated chroniclers, full of vivid imagination, who recount the events of the crusades with passion. But they are, at the same time, men of very narrow minds, without an idea beyond the little sphere in which they have lived; strangers to all science, full of prejudices, and incapable of forming any judgment whatever upon what passes around them, or upon the events which they relate. Open, on the contrary, the history of the crusades by William of Tyre: you will be surprised to find almost an historian of modern times, a mind developed, extensive and free, a rare political understanding of events, completeness of views, a judgment bearing upon causes and effects. James de Vitry affords an example of a different kind of development; he is a scholar, who not only concerns himself with what has reference to the crusades, but also occupies himself with manners, geography,

ethnography, natural history; who observes and describes the country. In a word, between the chroniclers of the first crusades and the historians of the last, there is an immense interval, which indicates a veritable revolution in mind.

This revolution is above all seen in the manner in which each speaks of the Mahommedans. To the first chroniclers, and consequently to the first crusaders, of whom the first chroniclers are but the expression, the Mahommedans are only an object of hatred. It is evident that they knew nothing of them, that they weighed them not, considered them not, except under the point of view of the religious hostility which existed between them; we discover no trace of any social relation; they detested and fought them, and that was all. William of Tyre, James de Vitry, and Bernard the Treasurer, speak quite differently of the Mussulmans: one feels that, although fighting them, they do not look upon them as mere monsters; that to a certain point they have entered into their ideas; that they have lived with them, that there is a sort of relation, and even a kind of sympathy established between them. William of Tyre warmly eulogizes Nouredin—Bernard the Treasurer, Saladin. They even go far as to compare the manners and conduct of the Mussulmans with those of the Christians; they take advantage of the Mussulmans to satirize the Christians, as Tacitus painted the manners of the Germans in contrast with the manners of the Romans. You see how enormous the change between the two epochs must have been, when you find in the last, with regard to the enemies of the Christians, to those against whom the crusades were directed, a liberty and impartiality of spirit which would have filled the first crusaders with surprise and indignation.

This, then, was the first and principal effect of the crusades, a great step toward the enfranchisement of mind, a great progress toward more extensive and liberal ideas. Commenced in the name and under the influence of religious creeds, the crusades removed from religious ideas, I will not say their legitimate influence, but the exclusive and despotic possession of the human mind. This result, doubtless altogether unforeseen, was born of many causes. The first is evidently the novelty, extension and variety of the spectacle which was opened to the view of the crusaders. It happened with them as with travellers. It is a common saying that the mind of travellers becomes enlarged; that the habit of observing various nations and manners, and different opinions, extends the ideas, and frees the judgment from old prejudices. The same fact was accomplished among these travelling nations who were called crusaders: their minds were opened and elevated, by seeing a multitude of different things, and by observing other manners

than their own. They also found themselves in juxtaposition with two civilizations, not only different from their own, but more advanced; the Greek on the one hand, and the Mahomedan on the other. There can be no doubt that the Greek society, although enervated, perverted, and falling into decay, had upon the crusaders the effect of a more advanced, polished and enlightened society than their own. The Mahomedan society afforded them a spectacle of the same nature. It is curious to observe in the old chroniclers the impression which the crusaders made upon the Mussulmans; these latter regarded them at first as barbarians, as the rudest, most ferocious and most stupid class of men they had ever seen. The crusaders, on their part, were struck with the riches and elegance of manners of the Mussulmans. To this first impression succeeded frequent relations between the two people. These extended and became much more important than is generally supposed. Not only had the Christians of the east habitual relations with the Mussulmans, but the west and the east became acquainted, visited and mixed with each other. It is not long since that one of those scholars who honor France in the eyes of Europe, M. Abel Remusat, discovered the existence of relations between the Mongol emperors and the Christian kings. Mongol ambassadors were sent to the Frank kings, to Saint Louis among others, to treat for an alliance with them, and to recommence the crusades in the common interest of the Mongols and the Christians against the Turks. And not only were diplomatic and official relations thus established between the sovereigns; frequent and various national relations were formed. I quote the words of M. Abel Remusat.*

"Many Italian, French and Flemish monks were charged with diplomatic missions to the Great Khan. Mongols of distinction came to Rome, Barcelona, Valentia, Lyons, Paris, London, Northampton; and a Franciscan of the kingdom of Naples was archbishop of Pekin. His successor was a professor of theology of the faculty of Paris. But how many others, less known, were drawn after these, either as slaves or attracted by the desire for gain, or guided by curiosity into countries till then unknown! Chance has preserved the names of some: the first who came to visit the King of Hungary, on the part of the Tartars, was an Englishman, banished from his country for certain crimes, and who, after wandering all over Asia, ended by taking service among the Mongols. A Flemish shoemaker met in the depths of Tartary a woman from Metz, named Paquette, who had been carried off from

**Mémoires sur les Relations Politiques des Princes Chrétiens avec les Empereurs Mongols* Deuxieme Mémoire, pp. 154-157.

Hungary; a Parisian goldsmith, whose brother was established at Paris, upon the great bridge, and a young man from the environs of Rouen, who had been at the taking of Belgrade. He saw, also, Russians, Hungarians and Flemings. A chorister, named Robert, after having traveled over Eastern Asia, returned to finish his days in the cathedral of Chartres. A Tartar was purveyor of helmets in the army of Philip the Handsome; John de Plancarpin found near Gayouk a Russian gentleman, whom he calls Temer, who was serving as an interpreter; many merchants of Breslau, Poland and Austria accompanied him on his journey to Tartary. Others returned with him by way of Russia; these were Genoese, Pisans and Venetians. Two merchants, whom chance had led to Bokhara, consented to follow a Mongol ambassador sent by Koulagou to Khoubilai. They sojourned several years both in China and Tartary, returned with letters from the Great Khan to the Pope; again returned to the Great Khan, taking with them the son of one of them, the celebrated Marco Polo, and again quitted the court of Khoubilai to return to Venice. Travels of this kind were not less frequent in the following century. Among the number are those of Sir John Mandeville, an English physician, of Oderic of Friula, of Pegoletti, of William de Bouldeselle, and several others, and we may suppose that those whose memorials are preserved, form but the least part of what were undertaken, and that there were at this period more persons capable of executing long journeys than of writing an account of them. Many of these adventurers remained and died in the countries which they visited. Others returned to their country as obscure as when they left it, but with an imagination filled with what they had seen, relating it to their family, exaggerating, no doubt, but leaving around them, amid absurd fables, useful remembrances and traditions capable of bearing fruit. Thus in Germany, Italy and France, in the monasteries, in the castles of the lords, and even down to the lowest ranks of society, were deposited precious seeds destined before long to germinate. All these unknown travellers carried the arts of their native land into the most distant countries, brought back other knowledge no less precious, and thus made, without being aware of it, more advantageous exchanges than all those of commerce. By these means not only the trade in silk, porcelain and Indian commodities was extended and facilitated—new routes opened to commercial industry and activity—but, what was of much more importance, foreign manners, unknown nations, extraordinary productions, offered themselves in crowds to the minds of the Europeans, confined, since the fall of the Roman Empire, within too narrow a circle. They began to know the value of the

most beautiful, the most populous, and the most anciently civilized of the four quarters of the globe. They began to study the arts, creeds, and idioms of its inhabitants, and there was even talk of establishing a professorship of the Tartar language in the University of Paris. Romantic narrative, when duly discussed and investigated, spread on all sides more just and varied notions. The world seemed to open on the side of the east; geography took a great stride, and the desire for discovery became the new form which clothed the adventurous spirit of the Europeans. The idea of another hemisphere ceased to present itself as a paradox void of all probability, when our own became better known; and it was in searching for the Zipangi of Marco Polo that Christopher Columbus discovered the New World."

You see, by the facts which led to the impulsion of the crusades, what, at the thirteenth and fourteenth centuries, was the new and vast world which was thrown open to the European mind. There can be no doubt but that this was one of the most powerful causes of development, and of the freedom of mind which shone forth at the end of this great event.

There is another cause which merits observation. Down to the time of the crusades, the court of Rome, the centre of the church, had never been in communication with the laity, except through the medium of ecclesiastics, whether legates sent from the court of Rome, or the bishops and the entire clergy. There had always been some laymen in direct relation with Rome; but, taken all together, it was through the ecclesiastics that she communicated with the people. During the crusades, on the contrary, Rome became a place of passage to the greater part of the crusaders, both in going and in returning. Numbers of the laity viewed her policy and manners, and could see how much of personal interest influenced religious controversy. Doubtless this new knowledge inspired many minds with a hardihood till then unknown.

When we consider the state of minds in general, at the end of the crusades, and particularly in ecclesiastical matters, it is impossible not to be struck by one singular fact: religious ideas experienced no change; they had not been replaced by contrary or even different opinions. Yet minds were infinitely more free; religious creeds were no longer the only sphere in which it was brought into play; without abandoning them, it began to separate itself from them, and carry itself elsewhere. Thus, at the end of the thirteenth century, the moral cause which had determined the crusades, which at least was its most energetic principle, had vanished; the moral state of Europe was profoundly modified.

The social state had undergone an analogous change. Much

investigation has been expended upon what was the influence of the crusades in this respect; it has been shown how they reduced a large number of fief holders to the necessity of selling them to their sovereigns, or of selling charters to the boroughs in order to procure the means of following the crusade. It has been shown that by their mere absence many of the lords must have lost the greater portion of their power. Without entering into the details of this inquiry, we may, I think, resolve into a few general facts the influence of the crusades upon the social state.

They greatly diminished the number of petty fiefs and small domains, of inferior fief-holders; and they concentrated property and power in a smaller number of hands. It is with the commencement of the crusades that we see the formation and augmentation of large fiefs and great feudal existences.

I have often regretted that there is no map of France divided into fiefs, as there is of its division into departments, arrondissements, cantons and parishes, in which all the fiefs should be marked, with their extent and successive relations and changes. If we were to compare, with the aid of such a map, the state of France before and after the crusades, we should see how many fiefs had vanished, and to what a degree the great and middle fiefs had increased. This was one of the most important facts to which the crusades led.

Even where the petty proprietors preserved their fiefs, they no longer lived as isolated as formerly. The great fief-holders became so many centres around which the smaller ones converged, and near to which they passed their lives. It had become necessary during the crusades for them to put themselves in the train of the richest and most powerful, to receive succor from him; they had lived with him, partaken of his fortune, gone through the same adventures. When the crusaders returned home, this sociability, this habit of living near to the superior lord, remained fixed in their manners. Thus as we see the augmentation of the great fiefs after the crusades, so we see the holders of those fiefs holding a much more considerable court in the interior of their castles, having near them a larger number of gentlemen who still preserved their small domains, but did not shut themselves up within them.

The extension of the great fiefs and the creation of a certain number of centres of society, in place of the dispersion which formerly existed, are the two principal effects brought about by the crusades in the heart of feudalism.

As to the burghers, a result of the same nature is easily perceptible. The crusades created the great boroughs. Petty commerce and industry did not suffice to create boroughs such as the great towns of Italy and Flanders were. It was com-

merce on a great scale, maritime commerce, and especially that of the east, which gave rise to them; it was the crusades which gave to maritime commerce the most powerful impulsion it had ever received.

Upon the whole, when we regard the state of society at the end of the crusades, we find that this movement of dissolution, of the dispersion of existences and influences, this movement of universal localization, if such a phrase be permitted, which had preceded this epoch, had ceased, by a movement with an exactly contrary tendency, by a movement of centralization. All now tended to approximation. The lesser existences were either absorbed in the greater, or were grouped around them. It was in this direction that society advanced, that all its progress was made.

You now see why, toward the end of the thirteenth and fourteenth centuries, neither people nor sovereigns any longer desired the crusades; they had no longer either the need or desire for them; they had been cast into them by the impulsion of the religious spirit, and by the exclusive domination of religious ideas upon the whole existence; this domination had lost its energy. They had sought, too, in the crusades a new life, more extensive and more varied; they now began to find it in Europe itself, in the progress of social relations. It was at this epoch the career of political aggrandizement opened itself to kings. Wherefore seek kingdoms in Asia, when they had them to conquer at their own doors? Philip Augustus went to the crusades against his will: what could be more natural? He had to make himself king of France. It was the same with the people. The career of riches opened before their eyes; they renounced adventures for work. For the sovereigns, the place of adventures was supplied by policy; for the people, by work on a great scale. One single class of society still had a taste for adventure; this was that portion of feudal nobility who, not being in a condition to think of political aggrandizement, and not liking work, preserved their ancient condition and manners. They therefore continued to rush to the crusades, and attempted their revival.

Such, in my opinion, are the great and true effects of the crusades: on one side, the extension of ideas, the enfranchisement of mind; on the other, the aggrandizement of existences and a large sphere opened to activity of all kind; they produced at once a greater degree of individual liberty, and of political unity. They aided the independence of man and the centralization of society. Much has been asked as to the means of civilization—which they directly imported from the east; it has been said that the chief portion of the great discoveries which, in the fourteenth and fifteenth centuries, called forth the

development of European civilization—the compass, printing, gunpowder—were known in the east, and that the crusaders may have brought them thence. This, to a certain point, is true. But some of these assertions are disputable. That which is not disputable is this influence, this general effect of the crusades upon the mind on one hand, and upon society on the other hand; they drew European society from a very straightened tract, and led it into new and infinitely more extensive paths; they commenced that transformation of the various elements of European society into governments and peoples which is the character of modern civilization. About the same time, royalty, one of those institutions which have most powerfully contributed to this great result, developed itself. Its history, from the birth of modern states down to the thirteenth century, will form the subject of my next lecture.

NINTH LECTURE.

IN our last lecture I attempted to determine the essential and distinctive character of modern European society as compared with primitive European society ; I believe that we discovered in this fact that all the elements of the social state, at first numerous and various, reduce themselves to two : on one hand the government, and on the other the people. Instead of encountering the feudal nobility, the clergy, the kings, the burghers, and serfs as the dominant powers and chief actors in history, we find in modern Europe but two great figures which alone occupy the historic scene, the government, and the country.

If such is the fact in which European civilization terminates, such also is the end to which we should tend, and to which our researches should conduct us. It is necessary that we should see this grand result take birth, and progressively develop and strengthen itself. We are entered upon the epoch in which we may arrive at its origin : it was, as you have seen, between the twelfth and the sixteenth century that the slow and concealed work operated in Europe which has led our society to this new form and definite state. We have likewise studied the first great event, which, in my opinion, evidently and powerfully impelled Europe, in this direction, that is, the crusades.

About the same epoch, almost at the moment that the crusades broke out, that institution commenced its aggrandizement, which has, perhaps, contributed more than anything to the formation of modern society, and to that fusion of all the social elements into two powers, the government and the people—royalty.

It is evident that royalty has played a prodigious part in the history of European civilization ; a single glance at facts suffices to convince one of it ; we see the development of royalty marching with the same step, so to speak, at least for a long period, as that of society itself ; the progress is mutual.

And not only is the progress mutual, but whenever society advances toward its modern and definitive character, royalty seems to extend and prosper ; so that when the work is consummated, when there is no longer any, or scarcely any, other important or

decisive influence in the great states of Europe, than that of the government and the public, royalty is the government.

And it has thus happened, not only in France, where the fact is evident, but also in the greater portion of European countries ; a little earlier or a little later, under somewhat different forms, the same result is offered us in the history of society in England, Spain, and Germany. In England, for example, it was under the Tudors that the ancient, peculiar, and local elements of English society were perverted and dissolved, and gave place to the system of public powers ; this also was the time of the greatest influence of royalty. It was the same in Germany, Spain and all the great European states.

If we leave Europe, and if we turn our view upon the rest of the world, we shall be struck by an analogous fact ; we shall everywhere find royalty occupying an important position, appearing as, perhaps, the most general and permanent of institutions, the most difficult to prevent, where it did not formerly exist, and the most difficult to root out where it had existed. From time immemorial it has possessed Asia. At the discovery of America, all the great states there were found with different combinations, subject to the monarchical system. When we penetrate into the interior of Africa, wherever we meet with nations in any way extensive, this is the prevailing system. And not only has royalty penetrated everywhere, but it has accommodated itself to the most diverse situations, to civilization, and to barbarism, to manners the most pacific, as in China, for example, and to those in which war, in which the military spirit dominates. It has alike established itself in the heart of the system of castes ; in the most rigorously classified societies, and in the midst of a system of equality, in societies which are utter strangers to all legal and permanent classification. Here despotic and oppressive, there favorable to civilization and even to liberty, it seems like a head which may be placed upon a multitude of different bodies, a fruit that will spring from the most dissimilar germs.

In this fact we may discover many curious and important consequences. I will take only two. The first is, that it is impossible such a result should be the fruit of mere chance, of force or usurpation alone ; it is impossible but that there should be a profound and powerful analogy between the nature of royalty, considered as an institution, and the nature, whether of individual man, or of human society. Doubtless force is intermixed with the origin of the institution ; doubtless force has taken an important part in its progress ; but when we meet with such a result as this, when we see a great event developing and reproducing itself during the course of many centuries, and in the midst of such different situations, we cannot attribute it to force.

Force plays a great part and an incessant one in human affairs ; but it is not their principle, their *primum mobile* ; above force and the part which it plays there hovers a moral cause which decides the totality of things. It is with force in the history of societies as with the body in the history of man. The body surely holds a high place in the life of man, but still it is not the principle of life. Life circulates within it, but it does not emanate from it. So it is with human societies ; whatever part force takes therein, it is not force which governs them, and which presides supremely over their destinies ; it is ideas and moral influences, which conceal themselves under the accidents of force and regulate the course of the society. It is a cause of this kind, and not force, which gave success to royalty.

A second fact, and one which is no less worthy of remark, is the flexibility of the institution, its faculty of modifying and adapting itself to a multitude of different circumstances. Mark the contrast : its form is unique, permanent, and simple ; it does not offer that prodigious variety of combinations which we see in other institutions, and yet it applies itself to societies which the least resemble it. It must evidently allow of great diversity, and must attach itself, whether in man himself or in society, to many different elements and principles.

It is from not having considered the institution of royalty in its whole extent ; from not having, on the one hand, penetrated to its peculiar and fixed principle, which, whatever may be the circumstances to which it applies itself, is its very essence and being—and, on the other, from not having estimated all the varieties to which it lends itself, and all the principles with which it may enter into alliance ; it is, I say, from not having considered royalty under this vast and two-fold point of view, that the part taken by it in the history of the world has not been always comprehended, that its nature and effects have often been misconstrued.

This is the work which I wish to go through with you, and in such a manner as to take an exact and complete estimate of the effects of this institution in modern Europe, whether they have flowed from its own peculiar principles or the modifications which it has undergone.

There can be no doubt that the force of royalty, that moral power which is its true principle, does not reside in the sole and personal will of the man momentarily king ; there can be no doubt that the people, in accepting it as an institution, philosophers in maintaining it as a system, have not intended or consented to accept the empire of the will of a man essentially narrow, arbitrary, capricious, and ignorant.

Royalty is quite a distinct thing from the will of a man, although it presents itself in that form ; it is the personification of

the sovereignty of right, of that will, essentially reasonable, enlightened, just and impartial, foreign and superior to all individual wills, and which in virtue of this title has a right to govern them. Such is the meaning of royalty in the minds of nations, such the motive for their adhesion.

Is it true that there is a sovereignty of right, a will which possesses the right of governing men? It is quite certain that they believe so; because they seek, and constantly have sought, and indeed cannot but seek, to place themselves under its empire. Conceive to yourselves the smallest assembly of men, I will not say a people: conceive that assembly under the submission to a sovereign who is only so *de facto*, under a force which has no right except that of force, which governs neither according to reason, justice, nor truth; human nature revolts at such a supposition—it must have right to believe in. It is the supremacy of right which it seeks, that is the only power to which man consents to submit. What is history but the demonstration of this universal fact? What are the greater portion of the struggles which take place in the life of nations but an ardent effort toward the sovereignty of right, so that they may place themselves under its empire? And not only nations, but philosophers believe in its existence, and incessantly seek it. What are all the systems of political philosophy, but the search for the sovereign of right? What is it that they treat of, but the question of knowing who has a right to govern society? Take the theocratical, monarchical, aristocratical, or democratical systems, all of them boast of having discovered wherein the sovereignty of right resides; all promise to society that they will place it under the rule of its legitimate master. I repeat, this is the end alike of all the works of philosophers, of all efforts of nations.

How should they but believe in the sovereignty of right? How should they but be constantly in search of it? Take the most simple suppositions; let there be something to accomplish, some influence to exercise, whether upon society in its whole, or upon a number of its members, or upon a single individual; there is evidently always a rule for this action, a legitimate will to follow and apply. Whether you penetrate into the smallest details of social life, or whether you elevate yourselves to the greatest events, you will everywhere encounter a truth to be proved, or a just and reasonable idea to be passed into reality. This is the sovereign of right, toward which philosophers and nations have never ceased and never can cease to aspire.

Up to what point can the sovereignty of right be represented in a general and permanent manner by a terrestrial force or by a human will? How far is such a supposition necessarily false and dangerous? What should be thought in particular of the personification of the sovereignty of right under the image of

royalty? Upon what conditions, within what limits is this personification admissible? Great questions, which I have not to treat of here, but which I could not resist pointing out, and upon which I shall say a word in passing.

I affirm, and the merest common sense will acknowledge, that the sovereignty of right completely and permanently can appertain to no one ; that all attribution of the sovereignty of right to any human power whatsoever is radically false and dangerous. Hence arises the necessity for the limitation of all powers, whatever their names or forms may be ; hence the radical illegitimacy of all absolute power, whether its origin be from conquest, inheritance, or election. People may differ as to the best means of seeking the sovereign of right ; they may vary as to place and times ; but in no place, no time, can any legitimate power be the independent possessor of this sovereignty.

This principle being laid down, it is no less certain that royalty, in whatever system it is considered, presents itself as the personification of the sovereign of right. Listen to the theocratical system : it will tell you that kings are the image of God upon earth ; this is only saying that they are the personification of sovereign justice, truth, and goodness. Address yourself to the jurisconsults ; they will tell you that the king is the living law ; that is to say, the king is the personification of the sovereign of right, of the just law, which has the right of governing society. Ask royalty itself, in the system of pure monarchy ; it will tell you that it is the personification of the state, of the general interest. In whatever alliance and in whatever situation you consider it, you will always find it summing itself up in the pretension of representing and reproducing the sovereign of right, alone capable of legitimately governing society.

There is no occasion for astonishment in all this. What are the characteristics of the sovereign of right, the characteristics derivable from his very nature? In the first place he is unique ; since there is but one truth, one justice, there can be but one sovereign of right. He is permanent, always the same ; truth never changes. He is placed in a superior situation, a stranger to all the vicissitudes and changes of this world ; his part in the world is, as it were, that of a spectator and judge. Well, is it royalty which externally reproduces, under the most simple form, that which appears its most faithful image, these rational and natural characteristics of the sovereign of right. Open the work in which M. Benjamin Constant has so ingeniously represented royalty as a neutral and moderating power, raised above the accidents and struggles of social life, and only interfering at great crises. Is not this, so to speak, the attitude of the sovereign of right in the government of human things? There must be something in this idea well calculated to impress the mind,

for it has passed with singular rapidity from books to facts. One sovereign made it in the constitution of Brazil the very foundation of his throne ; there royalty is represented as a moderating power, raised above all active powers, as a spectator and judge.

Under whatever point of view you regard this institution as compared with the sovereign of right, you will find that there is a great external resemblance, and that it is natural for it to have struck the minds of men. Accordingly, whenever their reflection or imagination turned with preference toward the contemplation or study of the nature of the sovereign of right, and his essential characteristics, they have inclined toward royalty. As in the time of the preponderance of religious ideas, the habitual contemplation of the nature of God led mankind toward the monarchical system, so when the jurisconsults dominated in society, the habit of studying, under the name of the law, the nature of the sovereign of right, was favorable to the dogma of his personification in royalty. The attentive application of the human mind to the contemplation of the nature of the sovereignty of right when no other causes have interfered to destroy the effect, has always given force and credit to royalty, which presents its image.

Moreover, there are times peculiarly favorable to this personification. These are the times when individual powers display themselves in the world with all their risks and caprices ; times when egotism dominates in individuals, whether from ignorance and brutality, or from corruption. Then society, abandoned to the contests of personal wills, and unable to raise itself by their free concurrence to a common and universal will, passionately long for a sovereign to whom all individuals may be forced to submit ; and the moment any institution, bearing any one of the characteristics of the sovereignty of right, presented itself and promised its empire to society, society rallied round it with eager earnestness, like outlaws, taking refuge in the asylum of a church. This is what has been seen in the disorderly youth of nations, such as we have surveyed. Royalty is admirably adapted to epochs, of vigorous and fruitful anarchy, so to speak, when society desires to form and regulate itself, without knowing how to do so by the free concord of individual wills. There are other times when, from directly opposite causes, it has the same recommendation. Why did the Roman Empire, so nearly in a state of dissolution at the end of the republic, subsist for nearly fifteen centuries afterward, under the name of that empire which, after all, was but a continual decay, a lengthened agony? Royalty alone could produce such an effect ; that alone could hold together a society which selfishness incessantly tended to destroy. The imperial power struggled for fifteen centuries against the ruin of the Roman world.

Thus there are times when royalty alone can retard the dissolution of society, and times when it alone accelerates its formation. And in both these cases it is because it represents more clearly and powerfully than any other form the sovereignty of right, that it exercises this power upon events.

From whatever point of view you may consider this institution, and at whatever epoch, you will acknowledge then that its essential characteristic, its moral principle, its true and inmost meaning is the image, the personification, the presumed interpreter of this unique, superior and essentially legitimate will, which alone has the right of governing society.

Let us now regard royalty from the second point of view, that is to say, in its flexibility, in the variety of parts which it has played, and the effects which it has produced; it is necessary that we should give the reason of these features and determine their causes.

Here we have an advantage; we can immediately enter upon history, and upon our own history. By a concurrence of singular circumstances it has happened that in modern Europe royalty has assumed every character under which it has shown itself in the history of the world. If I may be allowed to use an arithmetical expression, European royalty is the sum total of all possible species of royalty. I will run over its history from the fifth to the twelfth century; you will see how various are the aspects under which it presents itself, and to what an extent we shall everywhere find this character of variety, complication and conflict which belongs to all European civilization.

In the fifth century, at the time of the great German invasion, two royalties are present; the barbarian and the imperial royalty, that of Clovis and that of Constantine, both differing essentially in principles and effects. Barbaric royalty is essentially elective; the German kings were elected, although their election did not take place with the same forms which we are accustomed to attach to the idea; they were military chiefs, who were bound to make their power freely acceptable to a large number of companions, who obeyed them as being the most brave and the most able among them. Election is the true source of barbaric royalty, its primitive and essential characteristic.

Not that this characteristic in the fifth century was not already a little modified, or that different elements had not been introduced into royalty. The various tribes had had their chiefs for a certain time; some families had raised themselves to more trust, consideration and riches than others. Hence a commencement of inheritance; the chief was now mostly elected out of these families. This was the first differing principle which became associated with the dominant principle of election.

Another idea, another element, had also already penetrated

into barbaric royalty: this was the religious element. We find among some of the barbarous nations, among the Goths, for example, that the families of their kings descended from the families of their gods, or from those heroes of whom they had made gods, such as Odin. This is the situation of the kings of Homer, who sprang from gods or demi-gods, and by reason of this title were the objects of a kind of religious veneration, despite their limited power.

Such, in the fifth century, was barbaric royalty, already varying and fluctuating, although its primitive principle still dominated.

I take imperial, Roman royalty; this is a totally different thing; it is the personification of the state, the heir of the sovereignty and majesty of the Roman people. Consider the royalty of Augustus and Tiberius; the emperor is the representative of the senate, the comitia, and the whole republic; he succeeded them, and they are summed up in his person. Who would not recognize this in the modesty of language of the first emperors; of those, at least, who were men of sense, and understood their situation? They felt themselves in the presence of the late sovereign people who had abdicated in their favor; they addressed them as their representatives and ministers. But, in fact, they exercised the whole power of the people, and that with the most formidable intensity. It is easy for us to understand such a transformation; we have ourselves witnessed it; we have seen the sovereignty pass from the people to a man; that is the history of Napoleon. He also was the personification of the sovereign people; he unceasingly repeated to it, "Who like me has been elected by eighteen millions of men? Who like me is the representative of the people *Republique Française*?" And when upon one side of his coinage we read, *The French Republic*, and upon the other, *Napoleon, Empereur*, what does this mean, if not the fact which I have described, the people become king?

Such was the fundamental character of imperial royalty, which it preserved for the three first centuries of the empire; it was not till Diocletian that it took its definite and complete form. It was then, however, upon the point of undergoing a great change; a new royalty had almost appeared. Christianity labored for three centuries to introduce the religious element into society. It was under Constantine that it met with success, not in making it the prevalent fact, but in making it play an important part. Here royalty presents itself under a different aspect; its origin is not earthly; the prince is not the representative of the public sovereignty; he is the image of God, his representative and delegate. Power came down to him from above, while in imperial royalty it came from below. These are two utterly

different situations, and have entirely different results. The rights of liberty, political guarantees, are difficult to combine with the principle of religious royalty; but the principle itself is elevated, moral and salutary. Let us see the idea which was formed of the prince in the seventh century in the system of religious royalty. I take it from the canons of the councils of Toledo.

"The king is called king (*rex*) because he governs justly (*rectè*). If he act with justice (*rectè*) he legitimately possesses the name of king; if he act with injustice he miserably loses it. Our fathers, therefore, said with good reason: *Rex ejus eris si recta facis, si autem non facis, non eris*. The two principal royal virtues are justice and truth (science of the reason).

"The royal power is bound, like the people, to respect the laws . . . Obedience to the will of Heaven, gives to us and to our subjects wise laws which our greatness and that of our successors is bound to obey, as well as the whole population of our kingdom. . . .

"God, the creator of all things, in disposing the structure of the human body, has raised the head on high and has willed that the nerves of all the members should proceed therefrom. And he has placed in the head the torch of the eyes, to the end that from thence may be viewed all things that might be prejudicial. He has established the power of intellect, charging it to govern all the members and wisely to regulate their action. . . . It is first necessary, then, to regulate what relates to princes, to watch over their safety, and to protect their life, and then to order what relates to the people; so that in guaranteeing, as is fitting, the safety of kings, they at the same time guarantee, and more effectually, that of the people."*

But, in the system of religious royalty, another element, quite different from that of royalty itself, almost always introduced itself. A new power took its place by the side of it, a power nearer to God, to the source whence royalty emanates, than royalty itself: this was the clergy, the ecclesiastical power which interposed itself between God and kings and between kings and the people; so that royalty, the image of divinity, ran a chance of falling to the rank of an instrument of the human interpreters of the divine will. This was a new cause of diversity in the destinies and effects of the institution.

Here, then, we see, what in the fifth century were the various royalties which manifested themselves upon the ruins of the Roman Empire; the barbaric royalty, the imperial royalty and the rising religious royalty. Their fortunes were as various as their principles.

* *Forum Judaicum*, i. lib. 2; tit. i. l. 2, l. 4.

In France, under the first race, barbaric royalty prevailed; there were many attempts of the clergy to impress upon it the imperial or religious character; but election in the royal family, with some mixture of inheritance and religious ideas, remained dominant. In Italy, among the Ostrogoths, imperial royalty superseded the barbarian customs. Theodoric asserted himself the successor of the emperors. You need only read Cassiodorus, to acknowledge this character of his government.

In Spain, royalty appeared more religious than elsewhere; as the councils of Toledo were, I will not say the masters, but the influencing power, the religious character dominated, if not in the government, properly so-called, of the Visigoth kings at least, in the laws with which the clergy inspired them and the language which it made them speak.

In England, among the Saxons, barbarian manners subsisted almost entire. The kingdoms of the heptarchy were merely the domains of various bands, having each its chief. The military election is more evident there than elsewhere. Anglo-Saxon royalty is the most perfect type of barbaric royalty.

Thus from the fifth to the twelfth century three kinds of royalty manifested themselves at the same time in general facts; one or other of them prevailed, according to circumstances, in each of the different states of Europe.

The chaos was such at this epoch that nothing universal or permanent could be established; and, from one vicissitude to another, we arrive at the eighth century, without royalty having anywhere taken a definitive character. Toward the middle of the eighth century, with the triumph of the second race of the Frank kings, events generalized themselves and became clearer; as they were accomplished upon a greater scale they were better understood and led to more results. You will shortly see the different royalties distinctly succeed and combine with each other.

At the time when the Carolingians replace the Merovingians, a return of barbaric royalty is visible; election again appears. Pepin causes himself to be elected at Soissons. When the first Carolingians give the kingdoms to their sons, they take care to have them accepted by the chief persons in the states assigned them; when they make a partition, they wish it to be sanctioned in the national assemblies. In a word, the elective principle, under the form of public acceptance, reassumes some reality. You bear in mind that this change of dynasty was like a new invasion of the Germans in the west of Europe and brought back some shadow of their ancient institutions and manners.

At the same time we see the religious principle introduced more clearly into royalty, and playing therein a more important part. Pepin was acknowledged and crowned by the pope. He

had need of religious sanction; it had already a great power, and he courted it. Charlemagne took the same precaution; religious royalty was developing. Still under Charlemagne this character did not dominate; imperial royalty was evidently what he attempted to resuscitate. Although he closely allied himself to the clergy, and made use of them, he was not their instrument. The idea of a great state, of a great political unity, the resurrection of the Roman Empire, was the favorite idea, the dream of Charlemagne's reign. He died, and was succeeded by Louis le Debonnaire. Every one knows what character the royal power instantly assumed; the king fell into the hands of the clergy, who censured, deposed, re-established, and governed him; religious royalty, late subordinate, seemed on the point of being established.

Thus, from the middle of the eighth to the middle of the ninth century, the diversity of three kinds of royalty manifested itself in important, closely connected, and palpable events.

After the death of Louis le Debonnaire, in the dissolution into which Europe fell, the three species of royalty disappeared almost simultaneously; all became confusion. After some time, when the feudal system prevailed, a fourth royalty presented itself, different from any that we have yet seen; this was feudal royalty. This is confused, and very difficult to define. It has been said that the king in the feudal system was sovereign of sovereigns, lord of lords, that he held by sure ties, from one class to another, the entire society; that in calling around him his vassals, then the vassals of his vassals, he called the whole nation, and truly showed himself a king. I do not deny that this was the theory of feudal royalty; but it is a mere theory, which has never governed facts. That general influence of the king by the means of an hierarchial organization, those ties which united royalty to the entire feudal society, are the dreams of publicists. In fact, the greater part of the feudal lords were at this epoch entirely independent of royalty; a large number scarcely knew the name, and had little or no connection with it. All the sovereignties were local and independent: the title of king borne by one of the feudal lords expressed rather a remembrance than a fact.

This was the state of royalty during the course of the tenth and eleventh centuries. In the twelfth, with the reign of Louis le Gros, the aspect of things began to change. We more often find the king spoken of; his influence penetrated into places where hitherto he had never made way; his part in society became more active. If we seek by what title, we shall recognize none of the titles of which royalty had hitherto been accustomed to avail itself. It was not as the heir of the emperors, or by the title of imperial royalty, that it aggrandized itself and assumed

more coherence; nor was it in virtue of election, nor as the emanation of divine power. All trace of election had disappeared, the hereditary principle of succession had become definitively established; and although religion sanctioned the accession of kings, the minds of men did not appear at all engrossed with the religious character of the royalty of Louis le Gros. A new element, a character hitherto unknown, produced itself in royalty; a new royalty commenced.

I need not repeat that society was at this epoch in a prodigious disorder, a prey to unceasing violence. Society had in itself no means of striving against this deplorable state, of regaining any regularity or unity. The feudal institutions, those parliaments of barons, those seigneurial courts, all those forms under which in modern times, feudalism has been represented as a systematic and organized regime, all this was devoid of reality, of power; there was nothing there which could re-establish order or justice; so that, amid this social desolation, none knew to whom to have recourse for the reparation of any great injustice, or to remedy any great evil, or in any way to constitute anything resembling a state. The name of king remained; a lord bore it, and some few addressed themselves to him. The various titles under which royalty had hitherto presented itself, although they did not exercise any great control, were still present to many minds, and on some occasions were recognized. It sometimes happened that they had recourse to the king to repress any scandalous violence, or to re-establish something like order, in any place near to his residence, or to terminate any difference which had long existed; he was sometimes called upon to interfere in matters not strictly within his jurisdiction; he interfered as the protector of public order, as arbitrator and redresser of wrongs. The moral authority which remained attached to his name by degrees attracted to him this power.

Such is the character which royalty began to take under Louis le Gros, and under the administration of Suger. Then, for the first time, we see in the minds of men the idea, although very incomplete, confused and weak, of a public power, foreign to the powers which possessed society, called to render justice to those who were unable to obtain it by ordinary means, capable of establishing, or, at least, of commanding order; the idea of a great magistrate, whose essential character was that of maintaining or re-establishing peace, of protecting the weak, and of ending differences which none others could decide. This is the entirely new character under which, dating from the twelfth century, royalty presented itself in Europe, and especially in France. It was neither as a barbarous royalty, a religious royalty, nor as an imperial royalty, that it exercised its empire; it possessed only a limited, incomplete and accidental power;

the power, as it were (I know of no expression more exact), of a great justice of peace for the whole nation.

This is the true origin of modern royalty; this, so to speak, is its vital principle; that which has been developed in the course of its career, and which, I do not hesitate in saying, has brought about its success. At the different epochs of history, we see the different characters of royalty reappear; we see the various royalties which I have described attempting by turns to regain the preponderance. Thus the clergy has always preached religious royalty; juriconsults labored to resuscitate imperial royalty; and the nobles have sometimes wished to revive elective royalty, or the feudal. And not only have the clergy, juriconsults and nobility striven to make dominant in royalty such or such a character; it has itself made them all subservient to the aggrandizement of its power; kings have sometimes represented themselves as the delegates of God, sometimes as the successors of the emperors, according to the need or inclination of the moment; they have illegitimately availed themselves of these various titles, but none of them has been the veritable title of modern royalty, or the source of its preponderating influence. It is, I repeat, as the depositary and protector of public order, of universal justice and common interest—it is under the aspect of great magistracy, the center and union of society—that it has shown itself to the eyes of the people, and has appropriated their strength by obtaining their adhesion.

You will see, as we advance; this characteristic of modern European royalty, which commenced at the twelfth century, under the reign of Louis le Gros, strengthen and develop itself, and become, so to speak, its political physiognomy. It is through it that royalty has contributed to the great result which characterizes European societies in the present day, namely, the reduction of all social elements into two, the government and the country.

Thus, at the termination of the crusades, Europe entered the path which was to conduct it to its present state; and royalty took its appropriate part in the great transformation. In our next lecture we shall study the different attempts made at political organization, from the twelfth to the sixteenth century, with a view to maintain, by regulating it, the order, then almost in ruin. We shall consider the efforts of feudalism, of the church, and even of the boroughs, to constitute society after its ancient principles, and under its primitive forms, and thus defend themselves against the general metamorphosis which was in preparation.

go through with them, and to be just toward those men, those ages, who have so often gone astray, and have so cruelly failed, and who, notwithstanding, have displayed such high virtues, made such noble efforts, merited so much glory!

The attempts at political organization, formed from the twelfth to the sixteenth century, are of two kinds: the object of the one was to bring about the predominance of a particular social element, whether the clergy, the feudal nobility, or the boroughs; to make all the others subordinate to this, and on these terms to establish unity. The other proposed to itself to reconcile all the particular societies, and make them act in common, leaving to each its liberty, and guaranteeing its share of influence. The first class of these attempts is much more liable to the suspicion of selfishness and tyranny than the second. They have, in fact, oftener been tainted with these vices; they are, indeed, by their very nature, essentially tyrannical in their means of action. Some of them, however, may have been—in fact, have been—conceived with pure views for the good and progress of humanity.

The first which presents itself is the attempt at a theocratical organization—that is to say, the design of subduing the various classes of society to the principles and empire of the ecclesiastical society. You will call to mind what I have said concerning the history of the church. I have endeavored to show what principles have been developed within it, what was the share of legitimacy of each, how they were born of the natural course of events, what services they have rendered, and what evil they have brought about. I have characterized the various states into which the church passed from the eighth to the twelfth century; I have shown the state of the imperial church, the barbarian, the feudal, and lastly, the theocratical church. I suppose these recollections to be present to your minds; I shall now endeavor to indicate what the clergy did to dominate in Europe, and why they failed.

The attempt at theocratical organization appeared at a very early period, whether in the acts of the court of Rome, or in those of the clergy in general; it naturally resulted from the political and moral superiority of the church, but we shall find that it encountered, from the first, obstacles which, even in its greatest vigor, it did not succeed in removing.

The first was the very nature of Christianity. Wholly different in this respect from the greater number of religious creeds, Christianity was established by persuasion alone, by simply moral means; it was never, from the time of its birth, armed with force. In the early ages it conquered by the Word alone, and it only conquered souls. Hence it happened; that even after its triumph, when the church was in possession of great riches and

consideration, we never find her invested with the direct government of society. Her origin, purely moral, and merely by means of persuasion, was found impressed in her condition. She had much influence, but she had no power. She insinuated herself into the municipal magistracies, she acted powerfully upon the emperors and their agents, but she had not the positive administration of public affairs, the government, properly so called. Now a system of government—the theocratical or any other—cannot be established in an indirect manner by mere force of influence; it is necessary to administer, command, receive taxes, dispose of revenues, govern, in a word, actually to take possession of society. When nations and governments are acted upon by persuasion, much may be effected, and a great empire exercised; but there would be no government, no system would be founded, the future could not be provided for. Such has been, from its very origin, the situation of the Christian church; she has always been at the side of the government of society, but she has never removed it and taken its place; a great obstacle which the attempt at theocratical organization could not surmount.

She met at a very early period with a second obstacle. The Roman Empire once fallen, and the barbarian states founded, the church found herself among the conquered. The first thing necessary was to escape this situation; the work she had to commence by converting the conquerors, and thus raising herself to their rank. When this task was accomplished, and the church aspired to domination, she encountered the pride and resistance of the feudal nobility. This was a great service rendered to Europe by the feudal laity; in the eleventh century nations were almost entirely subjected to the church—sovereigns were scarce able to defend themselves; the feudal nobility alone never received the yoke of the clergy, never humbled themselves before it. One need only recall the general physiognomy of the middle ages to be struck by the singular mixture of haughtiness and submission, of blind credulity and freedom of mind in the relations between the lay lords and the priests; we there see some wreck of their primitive condition. You will call to mind how I endeavored to represent to you the origin of feudalism, its first elements, and the manner in which the elementary feudal society was formed around the habitation of the fiefholder. I remarked how in that society the priest was below the lord. Well, there always remained in the heart of the feudal nobility a recollection and feeling of this situation; it always regarded itself, not only as independent of the church, but as superior to it, as alone called to possess and really govern the country; it was always willing to live in concord with the clergy, but so as to guard its own interests, and not to give in

to those of the clergy. During many centuries it was the lay aristocracy which maintained the independence of society with regard to the church—that haughtily defended it when kings and people were subdued. It was the first to oppose, and perhaps contributed more than any other power to the failure of the attempt at a theocratical organization of society.

A third obstacle was likewise opposed, of which in general but little account has been held, and often even its effects been misconstrued.

Wherever a clergy has seized upon society and subjected it to a theocratical organization, it is upon a married clergy that this empire has devolved, upon a body of priests recruiting themselves from their own bosom, and bringing up their children from their very birth in and for the same situation. Examine history: look at Asia, Egypt; all the great theocracies are the work of a clergy which is a complete society in itself, which suffices for its own wants and borrows nothing from without.

By the celibacy of priests the Christian clergy was in an entirely different position; it was obliged, in order to its perpetuation, to have continual recourse to the laity; to seek from abroad, in all social positions and professions, the means of duration. In vain did the *esprit-de-corps* labor afterward to assimilate these foreign elements; something of the origin of the new-comers always remained; burghers or nobles, they always preserved some trace of their ancient spirit, their former condition. Doubtless celibacy, in placing the Catholic clergy in an entirely special situation, foreign to the interests and common life of mankind, has been to it a chief cause of isolation; but it has thus unceasingly forced it into connection with lay society, in order to recruit and renew itself therefrom, to receive and undergo some part of the moral revolutions which were accomplished in it; and I do not hesitate to say that this necessity, constantly renewing, has been much more prejudicial to the success of the attempt at theocratical organization than the *esprit-de-corps*, strongly maintained by celibacy, has been able to promote it.

The church finally encountered, within her own bosom, powerful adversaries to this attempt. Much has been said concerning the unity of the church, and it is true she has constantly aspired to it, and in some respects has happily attained it. But let us not be deceived by the pomp of words, nor by that of partial facts. What society has presented more civil dissensions, or undergone more dismemberment than the clergy? What nation has been more divided, more disordered, more unfixed than the ecclesiastical nation? The national churches of the majority of European countries almost incessantly struggled against the court of Rome; councils struggled against popes; heresies have

been innumerable and constantly renewing, schisms always in readiness ; nowhere has there been such diversity of opinions, such fury in contest, such parcelling out of power. The internal life of the church, the divisions which have broken out in it, the revolutions which have agitated it, have, perhaps, been the greatest obstacles to the triumph of that organization which she has attempted to impose upon society.

All these obstacles were in action and visible in the very cradle of the great attempt which we have in review. They did not, however, prevent its following its course, nor its being in progress for many centuries. Its most glorious time, its day of crisis, so to speak, was in the reign of Gregory VII, at the end of the eleventh century. You have already seen that the dominant idea of Gregory VII was to subjugate the world to the clergy, the clergy to the papal power, and Europe to a vast and regular theocracy. In this design, as far as it may be permitted us to judge of events at such a distance; this great man committed, in my opinion, two great faults ; one the fault of a theorist, the other of a revolutionist. The first was that of ostentatiously displaying his plan, of systematically proclaiming his principles on the nature and rights of spiritual power, of drawing from them beforehand, like an intractable logician, the most distant consequences. He thus menaced and attacked all the lay sovereignties of Europe, before being assured of the means of conquering them. Success in human affairs is neither obtained by such absolute proceedings, nor in the name of philosophical argument. Moreover, Gregory VII fell into the common error of revolutionists, that of attempting more than they can execute, and not taking the possible as the measure and limit of their efforts. In order to hasten the domination of his ideas, he engaged in contest with the empire, with all the sovereigns and with the clergy itself. He hesitated at no consequence, nor cared for any interest, but haughtily proclaimed that he willed to reign over all kingdoms, as well as over all minds, and thus raised against him, on one side, all the temporal powers, who saw themselves in pressing danger, and on the other the free-thinkers, who began to appear, and who already dreaded the tyranny over thought. Upon the whole, Gregory perhaps compromised more than he advanced the cause he wished to serve.

It, however, continued to prosper during the whole of the twelfth and down to the middle of the thirteenth century. This is the time of the greatest power and brilliancy of the church, though I do not think it can be strictly said that she made any great progress in that epoch. Down to the end of the reign of Innocent III she rather cultivated than extended her glory and power. It was at the moment of her greatest apparent success that a popular reaction declared itself against her in a large por-

tion of Europe. In the south of France the heresy of the Albigenses broke forth, which took possession of an entire, numerous, and powerful community. Almost at the same time in the north, in Flanders, ideas and desires of the same nature appeared. A little later, in England, Wyclif attacked with talent the power of the church, and founded a sect which will never perish. Sovereigns did not long delay entering the same path as the people. It was at the commencement of the thirteenth century that the most powerful and the ablest sovereigns of Europe, the emperors of the house of Hohenstaufen, succumbed in their struggle with the papacy. During this century Saint Louis, the most pious of kings, proclaimed the independence of the temporal power, and published the first Pragmatic Sanction, which has been the basis of all others. At the commencement of the fourteenth century the quarrel broke out between Philip le Bel and Boniface VIII; the king of England, Edward I, was not more docile toward Rome. At this epoch, it is clear, the attempt at a theocratical organization has failed; the church henceforth, will be on the defensive; she will no longer undertake to impose her system upon Europe; her only thought will be to preserve what she has conquered. It is from the end of the thirteenth century that the emancipation of the European lay society really dates; it was then that the church ceased to pretend to the possession of it.

She had long before renounced this claim, in the very sphere in which she seemed to have had the best chance of success. Long since, upon the very threshold of the church, around her very throne in Italy, theocracy had completely failed, and given place to an entirely different system—to that attempt at a democratical organization, of which the Italian republics are the type, and which, from the eleventh to the sixteenth century, played so brilliant a part in Europe.

You recollect what I have already related of the history of the boroughs, and the manner in which they were formed. In Italy, their destiny was more precocious and powerful than anywhere else; the towns there were much more numerous and wealthy than in Gaul, Britain, or Spain; the Roman municipal system remained more full of life and regular there.

The country parts of Italy, also, were much less fit to become the habitation of their new masters, than those of the rest of Europe. They had everywhere been cleared, drained, and cultivated; they were not clothed with forests; here the barbarians were unable to follow the hazards of the chase, or to lead an analogous life to that of Germany. Moreover, one part of this territory did not belong to them. The south of Italy, the *Campagna di Roma* and *Ravenna*, continued to depend upon the Greek emperors. Favored by its distance from the sovereign

and the vicissitudes of war, the republican system, at an early period, gained strength and developed itself in this part of the country. And not only the whole of Italy was not in the power of the barbarians, but even where the barbarians did conquer it, they did not remain in tranquil and definitive possession. The Ostrogoths were destroyed and driven out by Belisarius and Narses. The kingdom of the Lombards succeeded no better in establishing itself. The Franks destroyed it; and, without destroying the Lombard population, Pepin and Charlemagne judged it expedient to form an alliance with the ancient Italian population, in order to struggle against the recently conquered Lombards. The barbarians, then, were not in Italy, as elsewhere, the exclusive and undisturbed masters of the land and of society. Hence it was, that beyond the Alps, only a weak, thin, and scattered feudalism was established. The preponderance, instead of passing into the inhabitants of the country parts, as had happened in Gaul, for example, continued to appertain to the towns. When this result became evident, a large portion of the fief-holders, either from free-will or necessity, ceased to inhabit the country, and settled in the cities. Barbarian nobles became burghers. You may imagine what power and superiority this single fact gave the Italian towns as compared with the other boroughs of Europe. What we have remarked in these latter, was the inferiority and timidity of the population. The burghers appeared to us like courageous freedmen painfully struggling against a master who was always at their gates. The burghers of Italy were very different; the conquering and the conquered population mixed within the same walls; the towns had not to defend themselves from a neighboring master; their inhabitants were citizens, from all time free, at least the majority of them, who defended their independence and their rights against distant and foreign sovereigns, at one time against the Frank kings, at another against the emperors of Germany. Hence, the immense and early superiority of the towns of Italy: while elsewhere even the poorest boroughs were formed with infinite trouble, here we see republics, states arise.

Thus is explained the success of the attempt at republican organization in this part of Europe. It subdued feudalism at a very early period, and became the dominant form of society. But it was little calculated to spread or perpetuate itself; it contained but few germs of amelioration, the necessary condition to extension and duration.

When we examine the history of the republics of Italy, from the eleventh to the fifteenth century, we are struck with two apparently contradictory yet incontestable facts. We find an admirable development of courage, activity and genius, and in consequence great prosperity; there is there a movement and lib-

erty which is wanting to the rest of Europe. Let us ask, what was the real condition of the inhabitants, how their life was passed, what was their share of happiness? Here the aspect changes; no history can be more melancholy and gloomy. There is, perhaps, no epoch or country in which the position of man appears to have been more agitated, subject to more deplorable mischances, or where we meet with more dissensions, crimes, and misfortunes. Another fact is manifest at the same time; in the political system of the greater part of the republics liberty continually diminished. The want of security was such that the factions were inevitably forced to seek refuge in a system less tempestuous, though less popular, than that with which the state had commenced. Take the history of Florence, Venice, Genoa, Milan, Pisa; you will everywhere see that the general course of events, instead of developing liberty, and enlarging the circle of institutions, tends to contract it, and to concentrate the power within the hands of a small number of men. In a word, in these republics, so energetic, brilliant, and wealthy, two things were wanting: security of life, the first condition of a social state, and the progress of institutions.

Thence a new evil, which did not allow of the extension of the attempt at republican organization. It was from without, from foreign sovereigns, that the greatest danger was threatened to Italy. Yet this danger had never the effect of reconciling these republics and making them act in concert; they would never resist in common a common enemy. Many of the most enlightened Italians, accordingly, the best patriots of our time, deplore the republican system of Italy in the middle ages as the real cause of its never having become a nation. It was parcelled out, they say, into a multitude of petty people, too much under the control of their passions to allow of their confederating, or constituting themselves a state. They regret that their country, like the rest of Europe, has not passed through a despotic centralization which would have formed it into a nation, and have rendered it independent of foreigners. It seems, then, that the republican organization, even under the most favorable circumstances, did not contain within itself at this epoch the principle of progress, of duration, extension—that it had no future. Up to a certain point, one may compare the organization of Italy in the middle ages to that of ancient Greece. Greece also was a country full of petty republics, always rivals and often enemies, and sometimes rallying toward a common end. The advantage in this comparison is entirely with Greece. There can be no doubt that, although history gives us many instances of iniquity in them, too, there was more order, security, and justice in the interior of Athens, Lacedæmon, Thebes, than in the Italian republics. Yet how short was the political existence of Greece!

What a principle of weakness existed in that parcelling out of power and territory! When Greece came in contact with great neighboring states, with Macedonia and Rome, she at once succumbed. These small republics, so glorious and still so flourishing, could not form a coalition for defense. How much stronger was the reason for the same result happening in Italy, where society and human reason had been so much less developed and less firm than among the Greeks.

If the attempt at republican organization had so little chance of duration in Italy, where it had triumphed, where the feudal system had been vanquished, you may easily conceive that it would much sooner succumb in the other parts of Europe.

I will rapidly place its destinies before you.

There was one portion of Europe which bore a great resemblance to Italy; this was the south of France and the neighboring Spanish provinces, Catalonia, Navarre, and Biscay. There likewise the towns had gained great development, importance, and wealth. Many of the petty lords were allied with the burghers; a portion of the clergy had likewise embraced their cause; in a word, the country was in a situation remarkably analogous to that of Italy. Accordingly, in the course of the eleventh century, and at the commencement of the twelfth, the towns of Provence, Languedoc, and Aquitaine, aimed at a political flight, at forming themselves into independent republics, just like those beyond the Alps. But the south of France was in contact with a very strong feudalism, that of the north. At this time occurred the heresy of the Albigenses, and war broke out between feudal and municipal France. You know the history of the crusade against the Albigenses, under Simon de Montfort. This was the contest of the feudalism of the north against the attempt at democratical organization of the south. Despite the southern patriotism, the north carried the day; political unity was wanting in the south, and civilization was not sufficiently advanced for men to supply its place by concert. The attempt at republican organization was put down, and the crusade re-established the feudal system in the south of France.

At a later period, the republican attempt met with better success in the mountains of Switzerland. There the theater was very straitened. They had only to struggle against a foreign sovereign, who, although of a superior force to the Swiss, was by no means among the most formidable sovereigns of Europe. The struggle was courageously sustained. The Swiss feudal nobility allied themselves in a great measure with the towns—a powerful succor, which, however, altered the nature of the revolution which it aided, and imprinted upon it a more aristocratic and less progressive character than it seemed at first intended to bear.

I now pass to the north of France, to the boroughs of Flanders, the banks of the Rhine, and the Hanseatic league. There the democratical organization triumphed fully in the interior of the towns; yet, we perceive, from its outset, that it was not destined to extend itself, or to take entire possession of society. The boroughs of the north were surrounded and oppressed by feudalism, by lords and sovereigns, so that they were constantly on the defensive. It is clear that all they did was to defend themselves as well as they could; they essayed no conquests. They preserved their privileges, but remained shut up within their own walls. There the democratical organization was confined and stopped short; if we go elsewhere into the country, we do not find it.

You see what was the state of the republican attempt. Triumphant in Italy, but with little chance of success or progress; vanquished in the south of Gaul; victorious on a small scale in the mountains of Switzerland; in the north, in the boroughs of Flanders, the Rhine, and the Hanseatic league, condemned never to pass beyond the town walls. Still, in this position, evidently inferior in force to the other elements of society, it inspired the feudal nobility with a prodigious terror. The lords were jealous of the wealth of the boroughs, and feared their power; the democratical spirit penetrated into the rural districts; the insurrections of the peasants became more frequent and obstinate. A great coalition was formed among the feudal nobility against the boroughs, almost throughout Europe. The party was unequal; the boroughs were isolated; there was no understanding or communication between them; all was local. There existed, indeed, a certain sympathy between the burghers of various countries. The successes or reverses of the towns in Flanders in the struggles with the dukes of Burgundy certainly excited a lively emotion in the French towns. But this emotion was transitory and without result. No tie, no real union, was established. Nor did the boroughs lend strength to one another. Feudalism, then, had immense advantages over them. But, itself divided and incoherent, it did not succeed in destroying them. When the struggle had lasted a certain time, when they had acquired the conviction that a complete victory was impossible, it became necessary to acknowledge the petty republican burghers, to treat with them, and to receive them as members of the state. Then a new order commenced, a new attempt at political organization, that of mixed organization, the object of which was to reconcile all the elements of society, the feudal nobility, the boroughs, clergy and sovereigns, and to make them live and act together in spite of their profound hostility.

All of you know what are the States-general in France, the Cortes in Spain and Portugal, the Parliament in England, and

the Diets in Germany. You know, likewise, what were the elements of these various assemblies. The feudal nobility, the clergy and the boroughs, collected at them with a view to unite themselves into a single society, into one state, under one law and one power. They all, under various names, have the same tendency and design.

I shall take, as the type of this attempt, the fact which is the most interesting and the best known to us, namely, the States-general in France. I say the best known to us; yet I am convinced that the name of States-general awakens in your minds only vague and incomplete ideas. None of you can say what there was fixed or regular in the States-general of France, what was the number of their members, what the subjects of deliberation, or what the periods of convocation, and the duration of sessions; nothing is known of these things; it is impossible to draw from history any clear, general, or universal results as to this subject. When we examine closely the character of these assemblies in the history of France, they look like mere accidents, political last resource alike for people and knigs; as a last resource for kings when they had no money, and knew not how to escape from their embarrassments; and as a last resource for the people when the evil became so great that they knew not what remedy to apply. The nobility were present in the States-general; the clergy likewise took part in them; but they came full of indifference, for they knew that this was not their great means of action, that they could not promote by it the real part they took in the government. The burghers themselves were scarcely more eager about it; it was not a right which they took an interest in exercising, but a necessity which they tolerated. Thus may be seen the character of the political activity of these assemblies. They were sometimes utterly insignificant, and sometimes terrible. If the king was the strongest, their humility and docility were carried to an extreme; if the situation of the crown was unfortunate, if it had absolute need of the states, they fell into faction and became the instruments of some aristocratical intrigue, or some ambitious leaders. In a word, they were sometimes mere assemblies of notables, sometimes regular conventions. Thus their works almost always died with them; they promised and attempted much, and did nothing. None of the great measures which have really acted upon society in France, no important reform in the government, the legislation, or the administration, has emanated from the States-general. It must not, however, be supposed that they were without utility or effect; they have had a moral effect, of which too little account is generally taken; they have been, from one epoch to another, a protest against political servitude, a violent proclamation of certain tutelary principles; for example, that the country has

the right to impose taxes, to interfere in its own affairs, and to impose a responsibility upon the agents of power.

That these maxims have never perished in France is to be attributed to the States-general, and it is no small service to render to a people, to maintain in its manners, and renew in its thoughts the remembrances and rights of liberty. The States-general have possessed this virtue, but they have never been a means of government; they have never entered into the political organization; they have never attained the end for which they were formed, that is to say, the fusion into a single body of the various societies which divided the country.

The Cortes of Spain and Portugal offer us the same result. In a thousand circumstances, however, they are different. The importance of the Cortes varies according to place and time; in Aragon and Biscay, amid the debates concerning the succession to the crown, or the struggle against the Moors, they were more frequently convoked and more powerful. In certain Cortes, for example, in those of Castile in 1370 and 1373, the nobles and the clergy were not called. There is a crowd of details which it is necessary should be taken into account, if we look closely into events. But in the general view to which I am obliged to confine myself, it may be said of the Cortes, as of the States-general of France, that they have been an accident in history, and never a system, political organization, or a regular means of government.

The destiny of England was different. I shall not now enter upon this subject in detail. I propose to devote one lecture especially to the political life of England; I shall now merely say a few words upon the causes which have imparted to it a direction entirely different from that of the continent.

And, first, there were no great vassals in England, no subject in a condition to strive personally against royalty. The English barons and great lords were obliged to coalesce in order to resist in common. Thus have prevailed, in the high aristocracy, the principle of association and true political manners. Moreover, English feudalism, the petty fief-holders, have been gradually led by a series of events, which I cannot enumerate at present, to unite themselves with the burghers, to sit with them in the House of Commons, which thus possessed a power superior to that of the continental assemblies, a force truly capable of influencing the government of the country. Let us see what was the state of the British Parliament in the fourteenth century. The House of Lords was the great council of the king, a council actively associated in the exercise of power. The House of Commons, composed of the deputies of the petty fief-holders, and of burghers, took scarcely any part in the government, properly so called, but it established rights, and very energetically

defended private and local interests. The Parliament, considered as a whole, did not yet govern, but it was already a regular institution, a means of government adopted in principle, and often, in fact, indispensable. Thus the attempt at junction and alliance between the various elements of society, with a view to form of them a single political body, a regular state, was successful in England, while it had failed everywhere on the continent.

I shall say but a few words as to Germany, and those only to indicate the dominant character of its history. There the attempts at fusion, unity, and general political organization, were followed with little ardor. The various social elements remained much more distinct and independent than in the rest of Europe. If a proof is wanted, one may be found in modern times. Germany is the only country in which the feudal election long took part in the creation of royalty. I do not speak of Poland, nor the Slavonian nations, which entered at so late an age into the system of European civilization. Germany is likewise the only country of Europe where ecclesiastical sovereigns remained; which preserved free towns, having a true political existence and sovereignty. It is clear that the attempt to combine in a single society the elements of primitive European society has there had much less activity and effect than elsewhere.

I have now placed before you the great essays at political organization in Europe down to the end of the fourteenth century and the beginning of the fifteenth. You have seen them all fail. I have endeavored to indicate, in passing, the causes of this ill-success; indeed, truly speaking, they are reduceable to one. Society was not sufficiently advanced for unity; everything was as yet too local, too special, too narrow, too various in existence, and in men's minds. There were neither general interests nor general opinions capable of controlling particular interests and opinions. The most elevated and vigorous minds had no idea of administration, nor of true political justice. It was evidently necessary that a more active and vigorous civilization should first mix, assimilate, and, so to speak, grind together all these incoherent elements; it was first necessary that a powerful centralization of interest, laws, manners, and ideas should be brought about; in a word, it was necessary that a public power and public opinion should arise. We have arrived at the epoch when this great work was consummated. Its first symptoms, the state of mind and manners during the course of the fifteenth century, the tendency toward the formation of a central government, and a public opinion, will form the subject of our next lecture.

ELEVENTH LECTURE.

WE touch the threshold of modern history, properly so called—the threshold of that society which is our own, of which the institutions, opinions and manners were, forty years ago, those of France, are still those of Europe, and still exercise so powerful an influence upon us, despite the metamorphosis brought about by our revolution. It was with the sixteenth century, as I have already said, that modern society really commenced. Before entering upon it, recall to your minds, I pray you, the roads over which we have passed. We have discovered amid the ruins of the Roman Empire all the essential elements of the Europe of the present day; we have seen them distinguish and aggrandize themselves, each on its own account, and independently. We recognized, during the first epoch of history, the constant tendency of these elements to separation, isolation and a local and special existence. Scarcely was this end obtained—scarcely had feudalism, the boroughs and the clergy each taken its distinct form and place, than we see them tending to approach each other, to reunite, and form themselves into a general society, into a nation and a government. In order to arrive at this result, the various countries of Europe addressed themselves to all the different systems which co-existed in its bosom; they demanded the principle of social unity, the political and moral tie, from theocracy, aristocracy, democracy and royalty. Hitherto all these attempts had failed; no system or influence had known how to seize upon society, and by its empire to insure it a truly public destiny. We have found the cause of this ill-success in the absence of universal interests and ideas. We have seen that all was, as yet, too special, individual and local; that a long and powerful labor of centralization was necessary to enable society to extend and cement itself at the same time, to become at once great and regular—an end to which it necessarily aspired. This was the state in which we left Europe at the end of the fourteenth century.

She was far from understanding her position, such as I have endeavored to place it before you. She did not know distinctly what she wanted or what she sought; still she applied herself to the search as if she knew. The fourteenth century closed.

Europe entered naturally, and, as it were, instinctively, the path which led to centralization. It is the characteristic of the fifteenth century to have constantly tended to this result; to have labored to create universal interests and ideas, to make the spirit of specialty and locality disappear, to reunite and elevate existences and minds; in fine, to create what had hitherto never existed on a large scale, nations and governments. The outbreak of this fact belongs to the sixteenth and seventeenth centuries; it was in the fifteenth that it was preparing. It is this preparation which we have to investigate at present—this silent and concealed work of centralization, whether in social relations or ideas, a work accomplished by the natural course of events, without premeditation or design.

Thus man advances in the execution of a plan which he has not himself conceived, or which, perhaps, he does not even understand. He is the intelligent and free artificer of a work which does not belong to him. He does not recognize or comprehend it until at a later period, when it manifests itself outwardly and in realities; and even then he understands it but very incompletely. Yet it is by him, it is by the development of his intellect and his liberty that it is accomplished. Conceive a great machine, of which the idea resides in a single mind, and of which the different pieces are confided to different workmen, who are scattered, and are strangers to one another; none of them knowing the work as a whole, or the definitive and general result to which it concurs, yet each executing with intelligence and liberty, by rational and voluntary acts, that of which he has the charge. So is the plan of Providence upon the world executed by the hand of mankind; thus do the two facts which manifest themselves in the history of civilization co-exist; on the one hand, its fatality, that which escapes science and the human will—and on the other, the part played therein by the liberty and intellect of man, that which he infuses of his own will by his own thought and inclination.

In order properly to comprehend the fifteenth century—to obtain a clear and exact idea of this prelude, as it were, of modern society—we will distinguish the different classes of facts. We will first examine the political facts, the changes which have tended to form both nations and governments. Thence we will pass to moral facts; we will observe the changes which have been produced in ideas and manners, and we will thence deduce what general opinions were in preparation. As regards political facts, in order to proceed simply and quickly, I will run over all the great countries of Europe, and show you what the fifteenth century made of them—in what state it found and left them.

I shall commence with France. The last half of the four-

teenth century and the first half of the fifteenth were, as you know, the times of great national wars—the wars against the English. It was the epoch of the struggle for the independence of France and the French name against a foreign dominion. A glance at history will show with what ardor, despite a multitude of dissensions and treasons, all classes of society in France concurred in the struggle; what patriotism took possession of the feudal nobility, the burghers and even peasants. If there were nothing else to show the popular character of the event than the history of Joan of Arc, it would be more than sufficient proof. Joan of Arc sprung from the people. It was by the sentiments, creed and passions of the people that she was inspired and sustained. She was looked upon with distrust, scorn and even enmity by the people of the court and the chiefs of the army; but she had the soldiers and the people ever on her side. It was the peasants of Lorraine who sent her to the succor of the burghers of Orleans. No event has more strikingly shown the popular character of this war, and the feeling with which the whole country regarded it.

Thus began the formation of French nationality. Up to the reign of the Valois it was the feudal character which dominated in France; the French nation, the French mind, French patriotism, did not as yet exist. With the Valois commenced France, properly so called. It was in the course of their wars, through the phases of their destiny, that the nobility, the burghers and the peasants, were for the first time united by a moral tie, by the tie of a common name, a common honor and a common desire to conquer the enemy. But expect not to find there as yet any true political spirit, not any great purpose of unity in the government and institutions, such as we conceive them at the present day. Unity in the France of this epoch resided in its name, its national honor, and in the existence of a national royalty, whatever it might be, provided the foreigner did not appear therein. It is in this way that the struggle against the English powerfully contributed to the formation of the French nation, to impel it toward unity. At the same time that France was thus morally forming herself, and the national spirit was being developed, she was also forming herself materially, so to speak—that is to say, her territory was being regulated, extended, strengthened. This was the period of the incorporation of the greater part of the provinces which have become France. Under Charles VII, after the expulsion of the English, almost all the provinces which they had occupied, Normandy, Angoumois, Touraine, Poitou, Saintonge, etc., became definitively French. Under Louis XI, ten provinces, three of which were afterward lost and regained, were united to France; namely, Roussillon and Cerdagne, Burgundy,

Franche-Comté, Picardy, Artois, Provence, Maine, Anjou and Perche. Under Charles VIII and Louis XII, the successive marriages of Anne with these two kings brought us Brittany. Thus, at the same epoch, and during the course of the same events, the national territory and mind were forming together; moral and material France conjointly acquired strength and unity.

Let us pass from the nation to the government; we shall see the accomplishment of similar facts, shall move toward the same result. Never had the French government been more devoid of unity, connection and strength than under the reign of Charles VI and during the first part of that of Charles VII. At the end of this later reign the aspect of all things changed. There was evidently a strengthening, extending and organizing of power; all the great means of government—taxes, military force, law—were created upon a great scale and with some uniformity. This was the time of the formation of standing armies—free companies, cavalry—and free archers, infantry. By these companies Charles VII re-established some order in those provinces which had been desolated by the disorders and exactions of the soldiery, even after war had ceased. All contemporary historians speak with astonishment of the marvellous effects of the free companies. It was at the same epoch that the poll-tax, one of the principal revenues of the kingdom, became perpetual; a serious blow to the liberty of the people, but which powerfully contributed to the regularity and strength of the government. At this time, too, the great instrument of power, the administration of justice, was extended and organized; parliaments multiplied. There were five new parliaments constituted within a very short period of time: under Louis XI, the parliament of Grenoble (in 1451), of Bordeaux (in 1462), and of Dijon (in 1477); under Louis XII, the parliaments of Rouen (in 1499), and of Aix (in 1501). The parliament of Paris, also, at this time greatly increased in importance and firmness, both as regards the administration of justice and as charged with the policy of its jurisdiction.

Thus, as regards military force, taxation and justice, that is, in what constitutes its very essence, government in France in the fifteenth century acquired a character of permanence and regularity hitherto unknown; public power definitively took the place of the feudal powers.

At the same time another and far different change was brought about; a change which was less visible and which has less impressed itself upon historians, but which was perhaps of still more importance—namely, the change which Louis XI effected in the manner of governing.

Much has been said concerning the struggle of Louis XI

against the high nobles of the kingdom, of their abasement, and of his favor toward the burghers and the lower classes. There is truth in this, although much of it is exaggerated; it is also true that the conduct of Louis XI toward the different classes oftener troubled than served the state. But he did something much more important. Up to this time the government had proceeded almost entirely by force and by material means. Persuasion, address, the managing men's minds and leading them to particular views, in a word, policy—policy doubtless of falsehood and imposition, but also of management and prudence, had hitherto been but little attended to. Louis XI substituted in the government intellectual in place of material means, artifice instead of force, the Italian policy in place of the feudal. Look at the two men whose rivalry occupies this epoch of our history, Charles le Téméraire and Louis XI. Charles was the representative of the ancient form of governing; he proceeded by violence alone, he appealed incessantly to war, he was incapable of exercising patience, or of addressing himself to the minds of men in order to make them instruments to his success. It was on the contrary the pleasure of Louis XI to avoid the use of force and take possession of men individually by conversation and the skilful handling of interests and minds. He changed neither the institutions nor the external system, but only the secret proceedings, the tactics of power. It was left for modern times to attempt a still greater revolution, by laboring to introduce, alike into political means as into political ends, justice instead of selfishness, and publicity instead of lying fraud. It is not less true, however, that there was great indication of progress in renouncing the continual employment of force, in invoking chiefly intellectual superiority, in governing through mind, and not by the ruin of existences. It was this that Louis XI commenced, by force of his high intellect alone, amid all his crimes and faults, despite his bad nature.

From France I pass to Spain; there I find events of the same nature; it was thus that the national unity of Spain was formed in the fifteenth century; at that time, by the conquest of the kingdom of Grenada, the lengthened struggle between the Christians and the Arabs was put an end to. Then, also, the country was centralized; by the marriage of Ferdinand the Catholic and Isabella, the two principal kingdoms of Castile and Aragon were united under one power. As in France, royalty was here extended and strengthened; sterner institutions, and which bore a more mournful name, served as its fulcrum; instead of parliament, the inquisition arose. It contained in germ what it was to be, but it was not then the same as in its maturer age. It was at first rather political than religious, and intended rather to maintain order than to defend the faith. The

analogy extends beyond institutions, it is found even in the persons. With less artifice, mental movement and restless and busy activity, the character and government of Ferdinand the Catholic resembles that of Louis XI. I hold as unimportant all arbitrary comparisons and fanciful parallels; but here the analogy is profound and visible alike in general facts and in details.

We find the same in Germany. It was in the middle of the fifteenth century, in 1438, that the house of Austria returned to the empire, and with it the imperial power acquired a permanence which it had never possessed before; election afterward did little more than consecrate the hereditary successor. At the end of the fifteenth century Maximilian I definitively founded the preponderance of his house and the regular exercise of central authority; Charles VII first created in France a standing army for the maintenance of order; Maximilian was also the first, in his hereditary states, to attain the same end by the same means. Louis XI established the post-office in France; and Maximilian introduced it into Germany. Everywhere the same progressions of civilization were similarly cultivated for the good of central power.

The history of England in the fifteenth century consists of two great events; without, the struggle against the French, and within, that of the two roses, the foreign and the civil war. These two so dissimilar wars led to the same result. The struggle against the French was sustained by the English people with an ardor which profited only royalty. This nation, already more skilful and firm than any other in keeping back its forces and supplies, at this epoch abandoned them to its kings without foresight or limit. It was under the reign of Henry V that a considerable tax, the customs, was granted to the king from the commencement of his reign until his death. When the foreign war was ended, or almost so, the civil war, which had been associated with it, continued alone; the houses of York at first and Lancaster disputed for the throne. When they came to the end of their bloody contests, the high English aristocracy found itself ruined, decimated and incapable of preserving the power which it had hitherto exercised. The coalition of the great barons could no longer influence the throne. The Tudors ascended it, and with Henry VII, in 1485, commenced the epoch of political centralization and the triumph of royalty.

Royalty was not established in Italy, at least not under that name; but this matters little as regards the result. It was in the fifteenth century that the republics fell; even where the name remained, the power was concentrated in the hands of one or more families; republican life was extinct. In the north of Italy, almost all the Lombard republics were absorbed in the

duchy of Milan. In 1434 Florence fell under the domination of Medicis; in 1464 Genoa became subject to the Milanese. The greater portion of the republics, great and small, gave place to sovereign houses. The pretensions of foreign sovereigns were soon put forth upon the north and south of Italy, upon the Milanese on one side, and the kingdom of Naples on the other.

Upon whatever country of Europe we turn our eyes, and whatever portion of its history we may consider, whether it has reference to the nations themselves, or to their governments, to the institutions of the countries, we shall everywhere see the ancient elements and forms of society on the point of disappearing. The traditional liberties perish and new and more concentrated and regular powers arise. There is something profoundly sad in the fall of the old European liberties; at the time it inspired the bitterest feelings. In France, Germany, and above all, Italy, the patriots of the fifteenth century contested with ardor, and deplored with despair, this revolution, which, on all sides, was bringing about what might justly be called despotism. One cannot help admiring their courage and commiserating their sorrow; but at the same time it must be understood that this revolution was not only inevitable, but beneficial also. The primitive system of Europe, the old feudal and communal liberties, had failed in the organization of society. What constitutes social life is security and progress. Any system which does not procure present order and future progress, is vicious, and soon abandoned. Such was the fate of the ancient political forms, the old European liberties, in the fifteenth century. They could give to society neither security nor progress. These were sought elsewhere from other principles and other means. This is the meaning of all the facts which I have just placed before you.

From the same epoch dates another fact which has held an important place in the political history of Europe. It was in the fifteenth century that the relations of governments between themselves began to be frequent, regular, permanent. It was then for the first time that those great alliances were formed, whether for peace or war, which at a later period produced the system of equilibrium. Diplomacy in Europe dates from the fifteenth century. Toward the end of this century you see the principal powers of Continental Europe, the popes, the dukes of Milan, the Venetians, the emperors of Germany and the kings of Spain and of France, form connections, negotiate, unite, balance each other. Thus, at the time that Charles VII formed his expedition to conquer the kingdom of Naples, a great league was formed against him, between Spain, the pope, and the Venetians. The league of Cambrai was formed some years later (in 1508), against the Venetians. The holy league,

directed against Louis XII, succeeded in 1511 to the league of Cambrai. All these alliances arose from Italian policy, from the desire of various sovereigns to possess Italy, and from the fear that some one of them, by seizing it exclusively, should acquire an overpowering preponderance. This new order of facts was highly favorable to the development of royalty. On the one hand, from the nature of the external relations of states, they can only be conducted by a single person or a small number of persons, and exact a certain secrecy; on the other, the people had so little foresight, that the consequences of an alliance of this kind escaped them; it was not for them of any internal or direct interest; they cared little about it, and left such events to the discretion of the central power. Thus diplomacy at its birth fell into the hands of the kings, and the idea that it belonged exclusively to them, that the country, although free, and having the right of voting its taxes and interfering in its affairs, was not called upon to mix itself in external matters—this idea, I say, was established in almost all European minds as an accepted principle, a maxim of common law. Open English history at the sixteenth and seventeenth centuries, you will see what power this idea exercised, and what obstacle it opposed to English liberties under the reigns of Elizabeth, James I and Charles I. It was always under the name of this principle that peace and war, commercial relations, and all external affairs, appertained to the royal prerogative; and it was by this that absolute power defended itself against the rights of the country. Nations have been excessively timid in contesting this part of prerogative; and this timidity has cost them the more dear, since, from the epoch upon which we are now entering, that is to say, the sixteenth century, the history of Europe is essentially diplomatic. External relations, during nearly three centuries, are the important fact of history. Within nations became regulated, the internal government, upon the continent at least, led to no more violent agitations, nor absorbed public activity. It is external relations, wars, negotiations and alliances, which attract attention, and fill the pages of history, so that the greater portion of the destiny of nations has been abandoned to the royal prerogative and to central power.

Indeed, it was hardly possible it should be otherwise. A very great progress in civilization, and a great development of intellect and political skill are necessary, before the public can interfere with any success in affairs of this kind. From the sixteenth to the eighteenth century, the people were very far from being thus qualified. See what took place under James I in England at the commencement of the seventeenth century: his son-in-law, the elector-palatine, elected king of Bohemia, lost his crown; he was even robbed of his hereditary states, the

palatinate. The whole of Protestantism was interested in his cause, and for that reason England testified a lively interest toward him. There was a powerful ebullition of public opinion to force King James to take the part of his son-in-law, and regain for him the palatinate. Parliament furiously demanded war, promising all the means for carrying it on. James was unwilling; he eluded the matter, made some attempts at negotiation, sent some troops to Germany, and then came to tell Parliament that £900,000 sterling were necessary to maintain the contest with any chance of success. It is not said, nor indeed does it appear to have been the case, that his calculation was exaggerated. But the Parliament recoiled with surprise and terror at the prospect of such a charge, and it unwillingly voted £70,000 sterling to re-establish a prince, and reconquer a country three hundred leagues from England. Such was the political ignorance and incapacity of the public in matters of this kind; it acted without knowledge of facts, and without troubling itself with any responsibility. It was not then in a condition to interfere in a regular or efficacious manner. This is the principal cause of the external relations falling into the hands of the central power; that alone was in a condition to direct them, I do not say for the public interest, for it was far from being always consulted, but with any continuity or good sense.

You see, under whatever point of view the political history of Europe at this epoch is presented to us, whether we turn our eyes upon the internal state of nations, or upon the relations of nations with each other, whether we consider the administration of war, justice, or taxation, we everywhere find the same character; everywhere we see the same tendency to the centralization, unity, formation and preponderance of general interests and public powers. This was the secret work of the fifteenth century, a work which did not as yet lead to any very prominent result, nor any revolution, properly so called, in society, but which prepared the way for all of them. I shall immediately place before you facts of another nature, moral facts, facts which relate to the development of the human mind and universal ideas. There also we shall acknowledge the same phenomenon, and arrive at the same result.

I shall commence with a class of facts which has often occupied us, and which, under the most various forms, has always held an important place in the history of Europe, namely, facts relative to the church. Down to the fifteenth century we have seen in Europe no universal and powerful ideas acting truly upon the masses, except those of a religious nature. We have seen the church alone invested with the power of regulating, promulgating and prescribing them. Often, it is true, attempts at independence, even separation, were formed, and the church had

much to do to overcome them. But hitherto she had conquered them; creeds repudiated by the church had taken no general and permanent possession of the minds of the people; the Albigenses themselves were crushed. Dissension and contest were of incessant occurrence in the heart of the church, but without any decisive or eminent result. At the beginning of the fifteenth century an entirely different fact announced itself; new ideas, a public and avowed want of change and reform, agitated the church herself. The end of the fourteenth and commencement of the fifteenth century were marked by the great schism of the west, the result of the translation of the holy see to Avignon, and of the creation of two popes, one at Avignon, the other at Rome. The struggle between these two papacies is what is called the great schism of the west. It commenced in 1378. In 1409, the council of Pisa wishing to end it, deposed both popes, and nominated a third, Alexander V. So far from being appeased, the schism became warmer; there were three popes instead of two. The disorder and abuses continued to increase. In 1414 the council of Constance assembled at the summons of the Emperor Sigismund. It proposed to itself a work very different from nominating a new pope; it undertook the reform of the church. It first proclaimed the indissolubility of the general council, and its superiority over the papal power; it undertook to make these principles prevalent in the church, and to reform the abuses which had crept into it, above all the exactions by which the court of Rome had procured supplies. For the attainment of this end, the council nominated what we will call a commission of inquiry, that is to say, a *college of reform*, composed of deputies of the council taken from different nations; it was the duty of this college to seek what were the abuses which disgraced the church, and how they might best be remedied, and to make a report to the council, which would consult upon the means of execution. But while the council was occupied in this work, the question was mooted as to whether they could proceed in the reformation of abuses, without the visible participation of the chief of the church, without the sanction of the pope. The negative was passed by the influence of the Romanist party, supported by honest, but timid men; the council elected a new pope, Martin V, in 1417. The pope was desired to present on his part a plan of reform in the church. This plan was not approved, and the council separated. In 1431 a new council assembled at Basle with the same view. It resumed and continued the work of reform of the council of Constance, and met with no better success. Schism broke out in the interior of the assembly, the same as in Christianity. The pope transferred the council of Basle to Ferrara, and afterward to Florence. Part of the prelates refused to obey

the pope, and remained at Basle; and as formerly there had been two popes, so there were now two councils. That of Basle continued its projects of reform, and nominated its pope, Felix V. After a certain time it transported itself to Lausanne; and in 1449 dissolved itself, without having effected anything.

Thus papacy carried the day, and remained in possession of the field of battle and the government of the church. The council could not accomplish what it had undertaken; but it effected things which it had not undertaken, and which survived it. At the time that the council of Basle failed in its attempts at reform, sovereigns seized upon the ideas which it proclaimed, and the institution which it suggested. In France, upon the foundation of the decrees of the council of Basle, Charles V formed the Pragmatic Sanction, which he issued at Bourges in 1438; it enunciated the election of bishops, the suppression of first fruits, and the reform of the principal abuses which had been introduced into the church. The Pragmatic Sanction was declared in France the law of the state. In Germany, the diet of Mayence adopted it in 1439, and likewise made it a law of the German Empire. What the spiritual power had unsuccessfully attempted, the temporal power seemed destined to accomplish.

New reverses sprung up for the projects of reform. As the council had failed, so did the Pragmatic Sanction. In Germany it perished very abruptly. The diet abandoned it in 1448, in consequence of a negotiation with Nicholas V. In 1516, Francis I likewise abandoned it, and in its place substituted his Concordat with Leo X. The princes' reform did not succeed any better than that of the clergy. But it must not be supposed that it entirely perished. As the council effected things which survived it, so also the Pragmatic Sanction had consequences which it left behind, and which played an important part in modern history. The principles of the council of Basle were powerful and fertile. Superior men, and men of energetic character, have adopted and supported them. John of Paris, D'Ailly, Gerson, and many distinguished men of the fifteenth century, devoted themselves to their defense. In vain was the council dissolved; in vain was the Pragmatic Sanction abandoned; its general doctrines upon the government of the church, and upon the reforms necessary to be carried out, had taken root in France; they were perpetuated; they passed into the parliaments; and became a powerful opinion. They gave rise first to the Jansenists and afterward to the Gallicans. All this series of maxims and efforts tending to reform the church, which commenced with the council of Constance and terminated with the four propositions of Bossuet, emanated from the same source and were directed toward the same end; it was the same

fact successively transformed. It was in vain that the attempt at legal reform in the fifteenth century failed; not the less has it taken its place in the course of civilization—not the less has it indirectly exercised an enormous influence.

The councils were right in pursuing a legal reform, for that alone could prevent a revolution. Almost at the moment when the council of Pisa undertook to bring the great schism of the west to a termination, and the council of Constance to reform the church, the first essays at popular religious reform violently burst forth in Bohemia. The predictions and progress of John Huss date from 1404, at which period he began to teach at Prague. Here, then, are two reforms marching side by side; the one in the very heart of the church, attempted by the ecclesiastical aristocracy itself—a wise, but embarrassed and timid reform; the other, outside and against the church, violent and passionate. A contest arose between these two powers and designs. The council summoned John Huss and Jerome of Prague to Constance, and condemned them as heretics and revolutionists. These events are perfectly intelligible to us at the present day. We can very well understand this simultaneousness of separate reforms—enterprises undertaken, one by the governments, the other by the people, opposed to one another, and yet emanating from the same cause and tending to the same end, and, in fine, although at war with each other, still concurring to the same result. This is what occurred in the fifteenth century.

The popular reform of John Huss was for the instant stifled; the war of the Hussites broke forth three or four years after the death of their master. It lasted long, and was violent, but the empire finally triumphed. But as the reform of the councils had failed, as the end which they pursued had not been attained, the popular reform ceased not to ferment. It watched the first opportunity, and found it at the commencement of the sixteenth century. If the reform undertaken by the councils had been well carried out, the reformation might have been prevented. But one or the other must have succeeded; their coincidence shows a necessity.

This, then, is the state in which Europe was left by the fifteenth century with regard to religious matters—an aristocratical reform unsuccessfully attempted, and a popular reform commenced, stifled, and always ready to reappear. But it was not to the sphere of religious creeds that the fermentation of the human mind at this epoch was confined. It was in the course of the fourteenth century, as you all know, that Greek and Roman antiquity were, so to speak, restored in Europe. You know with what eagerness Dante, Petrarch, Boccaccio, and all their contemporaries sought for the Greek and Latin manu-

scripts, and published and promulgated them, and what noise and transports the least discovery of this kind excited.

In the midst of this excitement, a school was commenced in Europe which has played a very much more important part in the development of the human mind than has generally been attributed to it: this was the classical school. Let me warn you from attaching the same sense to this word which we give to it in the present day; it was then a very different thing from a literary system or contest. The classical school of that period was inflamed with admiration, not only for the writings of the ancients, for Virgil and Homer, but for the whole of ancient society, for its institutions, opinions and philosophy, as well as for its literature. It must be confessed that antiquity, under the heads of politics, philosophy and literature, was far superior to the Europe of the fourteenth and fifteenth centuries. It cannot, therefore, be wondered at that it should exercise so great a sway, or that for the most part, elevated, active, refined and fastidious minds should take a disgust at the coarse manners, confused ideas, and barbarous forms of their own times, and that they should devote themselves with enthusiasm to the study, and almost to the worship of a society at once more regular and developed. Thus was formed that school of free-thinkers which appeared at the commencement of the fifteenth century, and in which prelates, jurisconsults and scholars met together.

Amid this excitement happened the taking of Constantinople by the Turks, the fall of the Eastern Empire, and the flight into Italy of the Greek fugitives. They brought with them a higher knowledge of antiquity, numerous manuscripts, and a thousand new means of studying ancient civilization. The redoubled admiration and ardor with which the classical school was animated may easily be imagined. This was the time of the most brilliant development of the high clergy, particularly in Italy, not as regards political power, properly speaking, but in point of luxury and wealth; they abandoned themselves with pride to all the pleasures of a voluptuous, indolent, elegant and licentious civilization—to the taste for letters and arts, and for social and material enjoyments. Look at the kind of life led by the men who played a great political and literary part at this epoch—by Cardinal Bembo, for instance; you will be surprised at the mixture of sybaritism and intellectual development, of effeminate manners and hardihood of mind. One would think, indeed, when we glance over this epoch, when we are present at the spectacle of its ideas and the state of its moral relations, one would think we were living in France in the midst of the eighteenth century. There is the same taste for intellectual excitement, for new ideas, for an easy, agreeable life; the same

effeminateness and licentiousness; the same deficiency in political energy and moral faith, with a singular sincerity and activity of mind. The literati of the fifteenth century were, with regard to the prelates of the high church, in the same relation as men of letters and philosophers of the eighteenth century with the high aristocracy; they all had the same opinions and the same manners, lived harmoniously together and did not trouble themselves about the commotions that were in preparation around them. The prelates of the fifteenth century, commencing with Cardinal Bembo, most certainly no more foresaw Luther and Calvin than the people of the court foresaw the French revolution. The position, however, was analogous.

Three great facts, then, present themselves at this epoch in the moral order: first, an ecclesiastical reform attempted by the church herself; secondly, a popular religious reform; and finally an intellectual reform, which gave rise to a school of free-thinkers. And all these metamorphoses were in preparation amid the greatest political change which had taken place in Europe, amid the work of centralization of people and governments.

This was not all. This also was the time of the greatest external activity of mankind; it was a period of voyages, enterprises, discoveries and inventions of all kinds. This was the time of the great expeditions of the Portuguese along the coast of Africa, of the discovery of the passage of the Cape of Good Hope by Vasco da Gama, of the discovery of America by Christopher Columbus, and of the wonderful extension of European commerce. A thousand new inventions came forth; others already known, but only within a narrow sphere, became popular and of common use. Gunpowder changed the system of war, the compass changed the system of navigation. The art of oil-painting developed itself and covered Europe with masterpieces of art: engraving on copper, invented in 1460, multiplied and promulgated them. Linen paper became common; and lastly, from 1436 to 1452, printing was invented; printing, the theme of so much declamation and so many commonplaces, but the merit and effects of which no commonplace nor any declamation can ever exhaust.

You see what was the greatness and activity of this century—a greatness still only partially apparent, an activity, the results of which have not yet been fully developed. Violent reforms seem unsuccessful, governments strengthened and nations pacified. It might be thought that society was preparing to enjoy a better order of things, amid a more rapid progress. But the powerful revolutions of the sixteenth century were impending: the fifteenth had been preparing them. They will be the subject of my next lecture.

/

TWELFTH LECTURE.

WE have often deplored the disorder and chaos of European society ; we have complained of the difficulty of understanding and describing a society thus scattered, incoherent and broken up ; we have longed for, and patiently invoked, the epoch of general interests, order and social unity. We have now arrived at it ; we are entering upon the epoch when all is general facts and general ideas, the epoch of order and unity. We shall here encounter a difficulty of another kind. Hitherto we have had much trouble in connecting facts with one another, in making them co-ordinate, in perceiving whatever they may possess in common, and distinguishing some completeness. Everything reverses itself in modern Europe ; all the elements and incidents of social life modify themselves and act and react on one another ; the relations of men among themselves become much more numerous and complicated. It is the same in their relations with the government of the state, the same in the relations of the states among themselves, the same in ideas and in the works of the human mind. In the times which we have gone through a large number of facts passed away, isolated, foreign to one another, and without reciprocal influence. We shall now no longer find this isolation ; all things touch, commingle and modify as they meet. Is there anything more difficult than to seize the true unity amid such diversity, to determine the direction of a movement so extended and complex, to recapitulate this prodigious number of various elements so clearly connected with one another ; in fine, to ascertain the general dominant fact, which sums up a long series of facts, which characterizes an epoch, and is the faithful expression of its influence and its share in the history of civilization ? You will measure with a glance this difficulty in the great event which now occupies our attention. We encountered, in the twelfth century, an event which was religious in its origin if not in its nature ; I mean the crusades. Despite the greatness of this event, despite its long duration and the variety of incidents to which it led, we found it difficult enough to distinguish its general character, and to determine with any precision its unity and its influence. We have now to consider the religious revolution of the sixteenth century, usually called

the Reformation. Permit me to say, in passing, that I shall use the word *reformation* as a simple and understood term, as synonymous with *religious revolution*, and without implying any judgment of it. You see at the very commencement how difficult it is to recognize the true character of this great crisis, to say in a general manner what it was and what it effected.

It is between the commencement of the sixteenth and the middle of the seventeenth century that we must look for the reformation; for that period comprises, so to speak, the life of the event, its origin and end. All historical events, have, so to speak, a limited career; their consequences are prolonged to infinity; they have a hold upon all the past and all the future; but it is not the less true that they have a particular and limited existence, that they are born, that they increase, that they fill with their development a certain duration of time, and then decrease and retire from the scene in order to make room for some new event.

The precise date assigned to the origin of the reformation is of little importance; we may take the year 1520, when Luther publicly burnt, at Wittemberg, the bull of Leo X, which condemned him, and thus formally separated himself from the Roman church. It was between this epoch and the middle of the seventeenth century, the year 1648, the date of the treaty of Westphalia, that the life of the reformation was comprised. Here is the proof of it. The first and greatest effect of the religious revolution was to create in Europe two classes of states—the Catholic states and the Protestant states, to place them opposite each other, and open the contest between them. With many vicissitudes, this struggle lasted from the commencement of the sixteenth century down to the middle of the seventeenth. It was by the treaty of Westphalia, in 1648, that the Catholic and Protestant states at last acknowledged one another; agreed to, then, a mutual existence, and promised to live in society and peace, independently of the diversity of religion. Dating from 1648, diversity in religion ceased to be the dominant principle of the classification of states, of their external policy, their relations, and alliances. Up to this epoch, in spite of great variations, Europe was essentially divided into a Catholic and a Protestant league. After the treaty of Westphalia, this distinction vanished; states were either allied or divided upon other considerations than religious creeds. At that point, then, the preponderance, that is to say, the career, of the reformation stopped, although its consequences did not then cease to develop themselves. Let us now glance hastily over this career; and without doing more than naming the events and men, let us indicate what it contains. You will see by this mere indication, by this dry and incomplete nomenclature, what must be

the difficulty of recapitulating a series of facts so varied and so complex—of recapitulating them, I say, in one general fact; of determining what was the true character of the religious revolution of the sixteenth century, and of assigning its part in the history of our civilization. At the moment when the reformation broke forth, it fell, so to speak, into the midst of a great political event, the struggle between Francis I and Charles V, between France and Spain; a contest, first for the possession of Italy, afterward for that of the empire of Germany, and, lastly, for the preponderance in Europe. It was then the house of Austria elevated itself, and became dominant in Europe. It was then, also, that England, under Henry VIII, interfered in continental politics with more regularity, permanence, and to a greater extent that she had hitherto done.

Let us follow the course of the sixteenth century in France. It was filled by the great religious wars of the Protestants and Catholics, the means and the occasion of a new attempt of the great lords to regain the power they had lost. This is the political purport of our religious wars, of the League, of the struggle of the Guises against the Valois, a struggle which ended by the accession of Henry IV.

In Spain, during the reign of Philip II, the revolution of the United Provinces broke out. The inquisition and civil and religious liberty waged war under the names of the Duke of Alva and the Prince of Orange. While liberty triumphed in Holland by force of perseverance and good sense, she perished in the interior of Spain, where absolute power prevailed, both lay and ecclesiastical.

In England, during this period, Mary and Elizabeth reigned; there was the contest of Elizabeth, the head of Protestantism, against Philip II. This period is also marked by the accession of James Stuart to the throne of England, and by the commencement of the great quarrels between royalty and the English people.

About the same time new powers were created in the north. Sweden was reinstated by Gustavus Vasa in 1523. Prussia was created by the secularizing of the Teutonic Order. The powers of the north then took in European politics a place which they had never hitherto occupied, the importance of which was soon to be shown in the Thirty Years' War.

I return to France. The reign of Louis XIII; Cardinal Richelieu changed the internal administration of France, entered into relations with Germany, and lent aid to the Protestant party. In Germany, during the last part of the sixteenth century, the contest took place against the Turks; and at the commencement of the seventeenth century the Thirty Years' War, the greatest event of modern Eastern Europe. At this time

flourished Gustavus Adolphus, Wallenstein, Tilly, the Duke of Brunswick and the Duke of Weimar, the greatest names that Germany has yet to pronounce.

At the same epoch, in France, Louis XIV ascended the throne; the Fronde commenced. In England, the revolution which dethroned Charles I broke out.

I only take the leading events of history, events whose name every one knows; you see their number, variety and importance. If we seek events of another nature, events which are less apparent, and which are less summed up in names, we shall find this epoch equally full. This is the period of the greatest changes in the political institutions of almost all nations, the time when pure monarchy prevailed in the majority of great states, while in Holland the most powerful republic in Europe was created, and in England constitutional monarchy triumphed definitively, or nearly so. In the church, this was the period when the ancient monastic orders lost almost all political power, and were replaced by a new order of another character, and the importance of which, perhaps erroneously, is held as far superior to theirs, the Jesuits. At this epoch the council of Trent effaced what might still remain of the influence of the councils of Constance and Basle, and secured the definitive triumph of the court of Rome in the ecclesiastical order. Let us leave the church and cast an eye upon philosophy, upon the free career of the human mind; two men present themselves, Bacon and Descartes, the authors of the greatest philosophical revolution which the modern world has undergone, the chiefs of the two schools which disputed its empire. This also was the period of the brilliancy of Italian literature, and of the commencement of French and of English literature. And lastly, it was the time of the foundation of great colonies and the most active developments of the commercial system. Thus, under whatever point of view you consider this epoch, its political, ecclesiastical, philosophical and literary events are in great number, and more varied and important than in any century preceding it. The activity of the human mind manifested itself in every way: in the relations of men between themselves, in their relations with power, in the relations of states, and in purely intellectual labors; in a word, it was a time for great men and for great things. And in the midst of this period, the religious revolution which occupies our attention is the greatest event of all; it is the dominant fact of this epoch, the fact which gives to it its name and determines its character. Among so many powerful causes which have played so important a part, the reformation is the most powerful, that in which all the others ended, which modified them all, or was by them modified. So that what we have to do at present is to truly characterize and ac-

curately sum up the event which in a period of the greatest events, dominated over all, the cause which effected more than all others in a time of the most influential causes.

You will easily comprehend the difficulty of reducing facts so various, so important, and so closely united to a true historical unity. It is, however, necessary to do this. When events are once consummated, when they have become history, what are more important, and what man seeks above all things, are general facts, the connection of causes and effects. These, so to speak, are the immortal part of history, that to which all generations must refer in order to understand the past and to understand themselves. The necessity for generalization and rational result is the most powerful and the most glorious of all intellectual wants; but we should be careful not to be contented with incomplete and precipitate generalizations. Nothing can be more tempting than to give way to the pleasure of assigning immediately and at the first view, the general character and permanent results of an epoch or event. The human mind is like the will, always urgent for action, impatient of obstacles, and eager for liberty and conclusions; it willingly forgets facts which impede and cramp it; but in forgetting, it does not destroy them; they subsist to condemn it some day and convict it of error. There is but one means for the human mind to escape this danger; that is, courageously and patiently to exhaust the study of facts before generalizing and concluding. Facts are to the mind what rules of morality are to the will. It is bound to know them and to bear their weight; and it is only when it has fulfilled this duty, when it has viewed and measured their whole extent, it is then only that it is permitted to unfold its wings and take flight to the higher region where it will see all things in their totality and their results. If it attempt to mount too quickly, and without having gained a knowledge of all the territory which it will have to contemplate from thence, the chance of error and failure is very great. It is the same as in an arithmetical calculation, where one error leads to others, *ad infinitum*. So in history, if in the first labor we do not attend to all the facts, if we give ourselves up to the taste for precipitate generalization, it is impossible to say to what mistakes we may be led.

I am warning you in a measure against myself. I have only made, and, indeed, could only make, attempts at generalization, general recapitulations of facts which we have not studied closely and at large. But having arrived at an epoch when this undertaking is much more difficult than at any other, and when the chances of error are much greater, I have thought it a duty thus to warn you. That done, I shall now proceed and attempt as to the reformation what I have done as to other events; I

shall endeavor to distinguish its dominant fact, to describe its general character, to say, in a word, what is the place and the share of this great event in European civilization.

You will call to mind how we left Europe at the end of the fifteenth century. We have seen in its course, two great attempts at religious revolution and reform: an attempt at legal reform by the councils, and an attempt at revolutionary reform in Bohemia by the Hussites; we have seen them stifled and failing, one after the other; but still we have seen that it was impossible the event should be prevented, that it must be reproduced under one form or another; that what the fifteenth century had attempted, the sixteenth would inevitably accomplish. I shall not recount in any way the details of the religious revolution of the sixteenth century: I take it for granted that they are almost universally known. I attend only to its general influence upon the destinies of the human race.

When the causes which determined this great event have been investigated, the adversaries of the reformation have imputed it to accidents, to misfortunes in the course of civilization; for example, to the sale of indulgences having been confided to the Dominicans, which made the Augustines jealous; Luther was an Augustine, and, therefore, was the determining cause of the reformation. Others have attributed it to the ambition of sovereigns, to their rivalry with the ecclesiastical power, and to the cupidity of the lay nobles, who wished to seize upon the property of the church. They have thus sought to explain the religious revolution merely from the ill side of men and human affairs, by suggestions of private interests and personal passions.

On the other hand, the partisans and friends of the reformation have endeavored to explain it merely by the necessity for reform in the existing abuses of the church; they have represented it as a redressing of religious grievances, as an attempt conceived and executed with the sole design of reconstituting a pure and primitive church. Neither of these explanations seems to me sound. The second has more truth in it than the first; at least it is more noble, more in unison with the extent and importance of the event; still I do not think it correct. In my opinion, the reformation was neither an accident, the result of some great chance, of personal interest, nor a mere aim at religious amelioration, the fruit of an Utopia of humanity and truth. It had a far more powerful cause than all this, and which dominates over all particular causes. It was a great movement of the liberty of the human mind, a new necessity for freely thinking and judging on its own account, and with its own powers, of facts and ideas which hitherto Europe had received, or was held bound to receive, from the hands of authority.

It was a grand attempt at the enfranchisement of the human mind; and to call things by their proper names, an insurrection of the human mind against absolute power in the spiritual order. Such I believe to be the true, general and dominant character of the reformation.

When we consider the state at this epoch, of the human mind on the one hand, and on the other that of the church which governed the human mind, we are struck by this twofold fact: on the part of the human mind there was much more activity, and much more thirst for development and empire than it had ever felt. This new activity was the result of various causes, but which had been accumulating for ages. For example, there had been ages when heresies took birth, occupied some space of time, fell, and were replaced by others; and ages when philosophical opinions had run the same course as the heresies. The labor of the human mind, whether in the religious or in the philosophical sphere, had accumulated from the eleventh to the sixteenth century: and at last the moment had arrived when it was necessary that the result should appear. Moreover, all the means of instruction created or encouraged in the very bosom of the church bore their fruits. Schools had been instituted: from these schools had issued men with some knowledge, and their number was daily augmented. These men wished at last to think for themselves, and on their own account, for they felt stronger than they had ever yet done. Finally arrived that renewal and regeneration of the human mind by the restoration of antiquity, the progress and effects of which I have described to you.

The union of all these causes at the commencement of the sixteenth century, impressed upon the mind a highly energetic movement, an imperative necessity for progress.

The situation of the government of the human mind, the spiritual power, was quite different; it, on the contrary, had fallen into a state of indolence and immobility. The political credit of the church, of the court of Rome, had much diminished; European society no longer belonged to it; it had passed into the dominion of lay governments. Still the spiritual power preserved all its pretensions, all its splendor and external importance. It happened with it as it has more than once done with old governments. The greater part of the complaints urged against it were no longer applied. It is not true that the court of Rome in the sixteenth century was very tyrannical; nor is it true that its abuses, properly so called, were more numerous or more crying than they had been in other times. On the contrary, perhaps ecclesiastical government had never been more easy and tolerant, more disposed to let all things take their course, provided they did not put itself in question, pro-

vided it was so far acknowledged as to be left in the enjoyment of the rights which it had hitherto possessed, that it was secured the same existence and paid the same tributes. It would willingly have left the human mind in tranquillity if the human mind would have done the same toward it. But it is precisely when governments are least held in consideration, when they are the least powerful, and do the least evil that they are attacked, because then they can be attacked, and formerly they could not be.

It is evident, then, by the mere examination of the state of the human mind, and that of its government at this epoch, that the character of the reformation must have been a new impulse of liberty, a great insurrection of the human intellect. Do not doubt but this was the dominant cause, the cause which rose above all the others—a cause superior to all interests, whether of nations or sovereigns—superior also to any mere necessity for reform, or the necessity for redressing of grievances which were then complained of.

I will suppose that after the first years of the reformation, when it had displayed all its pretensions, set forth all its grievances, the spiritual power had suddenly fallen in with its views, and had said, "Well, so be it. I will reform everything; I will return to a more legal and religious order; I will suppress all vexations, arbitrariness and tributes; even in doctrinal matters, I will modify, explain, and return to the primitive meaning. But when all grievances are thus redressed, I will preserve my position—I will be as formerly, the government of the human mind, with the same power and the same rights." Do you suppose that on these conditions the religious revolution would have been content, and would have stopped its progress? I do not think it. I firmly believe that it would have continued its career, and that after having demanded reformation, it would have demanded liberty. The crisis of the sixteenth century was not merely a reforming one, it was essentially revolutionary. It is impossible to take from it this character, its merits and its vices; it had all the effects of this character.

Let us cast a glance upon the destinies of the reformation; let us see, especially and before all, what it effected in the different countries where it was developed. Observe that it was developed in very various situations, and amid very unequal chances. If we find that in spite of the diversity of situations, and the inequality of chances, it everywhere pursued a certain end, obtained a certain result, and preserved a certain character, it will be evident that this character, which surmounted all diversities of situation, and all unequalities of chances, must have been the fundamental character of the event—that this result must have been its essential aim.

Well, wherever the religious revolution of the sixteenth cen-

ture prevailed, if it did not effect the entire enfranchisement of the human mind, it procured for it new and very great increase of liberty. It doubtless often left the mind to all the chances of the liberty or servitude of political institution; but it abolished or disarmed the spiritual power, the systematic and formidable government of thought. This is the result which the reformation attained amid the most various combinations. In Germany there was no political liberty; nor did the reformation introduce it. It fortified rather than weakened the power of princes. It was more against the free institutions of the middle ages than favorable to their development. Nevertheless, it resuscitated and maintained in Germany a liberty of thought greater, perhaps, than anywhere else.

In Denmark, a country where absolute power dominated, where it penetrated into the municipal institutions as well as into the general institutions of the state, there also, by the influence of the reformation, thought was enfranchised and freely exercised in all directions.

In Holland, in the midst of a republic, and in England, under constitutional monarchy, and despite a religious tyranny of long duration, the emancipation of the human mind was likewise accomplished. And, lastly, in France, in a situation which seemed the least favorable to the effects of the religious revolution, in a country where it had been conquered, there even it was a principle of intellectual independence and liberty. Down to 1685, that is to say, until the revocation of the edict of Nantes, the reformation had a legal existence in France. During this lengthened period it wrote and discussed, and provoked its adversaries to write and discuss with it. This single fact, this war of pamphlets and conferences between the old and new opinions, spread in France a liberty far more real and active than is commonly believed—a liberty which tended to the profit of science, the honor of the French clergy, as well as to the profit of thought in general. Take a glance at the conferences of Bossuet with Claude upon all the religious polemics of that period, and ask yourselves whether Louis XIV would have allowed a similar degree of liberty upon any other subject. It was between the reformation and the opposite party that there existed the greatest degree of liberty in France during the seventeenth century. Religious thought was then far more bold, and treated questions with more freedom than the political spirit of Fénélon himself in "Telemachus." This state of things did not cease until the revocation of the edict of Nantes. Now, from 1685 to the outburst of the human mind in the eighteenth century, there were not forty years; and the influence of the religious revolution in favor of intellectual liberty had scarcely ceased when that of the philosophical revolution commenced.

You see that wherever the reformation penetrated, wherever it played an important part, victorious or vanquished, it had as a general, dominant and constant result, an immense progress in the activity and liberty of thought, and toward the emancipation of the human mind.

And not only had the reformation this result, but with this it was satisfied; wherever it obtained that, it sought for nothing further, so much was it the foundation of the event, its primitive and fundamental character. Thus, in Germany it accepted, I will not say political servitude, but, at least, the absence of liberty. In England it consented to the constitutional hierarchy of the clergy and the presence of a church with quite as many abuses as there had ever been in the Romish church, and far more servile.

Why should the reformation, so passionate and stubborn in some respects, show itself in this so easy and pliant? It was because it had obtained the general fact to which it tended, the abolition of spiritual power, the enfranchisement of the human mind. I repeat, that wherever it attained this end, it accommodated itself to all systems and all situations.

Let us now take the counter-proof of this inquiry; let us see what happened in countries into which the religious revolution had not penetrated, where it had been stifled in the beginning, where it had never been developed. History shows that there the human mind has not been enfranchised; two great countries, Spain and Italy, will prove this. While in those European countries where the reformation had taken an important place, the human mind, during the three last centuries, has gained an activity and a freedom before unknown; in those where it has not penetrated, it has fallen, during the same period, into effeminacy and indolence; so that the proof and counter-proof have been made, so to speak, simultaneously, and given the same result.

Impulse of thought and the abolition of absolute power in the spiritual order, are therefore the essential character of the reformation, the most general result of its influence and the dominant fact of its destiny.

I designedly say, the *fact*. The emancipation of the human mind was in reality, in the course of the reformation, a fact rather than a principle, a result rather than an intention. In this respect I think the reformation executed more than it had undertaken; more perhaps than it had even desired. Contrary to most other revolutions, which have remained far behind their wishes, of which the event is far inferior to the thought, the consequences of the revolution surpassed its views; it is greater as an event than as a plan; what it effected it did not fully foresee, nor fully avow.

What were the reproaches with which its adversaries constantly upbraid the reformation? Which of its results did they in a manner cast in its teeth to reduce it to silence?

Two principal ones. First: The multiplicity of sects, the prodigious license allowed to mind, the dissolutions of the religious society as a whole. Second: Tyranny and persecution. "You provoke license," said they to the reformers; "you even produce it; and when you have created it, you wish to restrain and repress it. And how do you repress it? By the most severe and violent means. You yourselves persecute heresy, and by virtue of an illegitimate authority."

Survey and sum up all the great attacks directed against the reformation, discarding the purely dogmatical questions; these are the two fundamental reproaches to which they reduce themselves.

The reformed party was greatly embarrassed by them. When they imputed it to the multiplicity of sects, instead of avowing them, and maintaining the legitimacy of their development, it anathematized them, deplored their existence and denied them.

Taxed with persecution, it defended itself with the same embarrassment; it alleged the necessity; it had, it said, the right to repress and punish error, because it was in the possession of truth; its creed and institutions alone were legitimate; and if the Roman church had not the right to punish the reformers, it was because she was in the wrong as against them.

And when the reproach of persecution was addressed to the dominant party in the reformation, not by its enemies, but by its own offspring, when the sects which it anathematized said to it, "We only do what you have done; we only separate ourselves as you separated yourselves," it was still more embarrassed for an answer, and often only replied by redoubled rigor.

In fact, while laboring for the destruction of absolute power in the spiritual order, the revolution of the sixteenth century was ignorant of the true principles of intellectual liberty, it enfranchised the human mind, and yet pretended to govern it by the law; in practice it was giving prevalence to free inquiry, and in theory it was only substituting a legitimate in place of an illegitimate power. It did not elevate itself to the first cause, nor descend to the last consequences of its work. Thus it fell into a double fault; on the one hand, it neither knew nor respected all the rights of human thought; at the moment that it clamored for them on its own account, it violated them with regard to others; on the other hand, it knew not how to measure the rights of authority in the intellectual order; I do not speak of coercive authority, which in such matters should possess none, but of purely moral authority, acting upon the mind alone, and simply by way of influence. Something is wanting in most

of the reformed countries, to the good organization of the intellectual society, and to the regular action of ancient and general opinions. They could not reconcile the rights and wants of tradition with those of liberty, and the cause doubtless lay in this fact, that the reformation did not fully comprehend and receive its own principles and effects.

Hence, also, it had a certain air of inconsistency and narrow-mindedness, which often gave a hold and advantage over it to its adversaries. These last knew perfectly well what they did, and what they wished to do; they went back to the principles of their conduct, and avowed all the consequences of it. There was never a government more consistent and systematic than that of the Roman church. In practice the court of Rome has greatly yielded and given way, much more so than the reformation; in theory, it has much more completely adopted its peculiar system, and kept to a much more coherent conduct. This is a great power, this full knowledge of what one does and wishes, this complete and rational adoption of a doctrine and a design. The religious revolution of the sixteenth century presented in its course a striking example of it. Every one knows that the chief power instituted to struggle against it was the order of Jesuits. Throw a glance upon their history; they have everywhere failed. Wherever they have interfered to any extent, they have carried misfortune into the cause with which they mixed. In England they ruined kings; in Spain the people. The general course of events, the development of modern civilization, the liberty of the human mind, all these powers against which the Jesuits were called upon to contest, fought and conquered them. And not only have they failed, but call to mind the means they have been obliged to employ. No splendor or grandeur; they brought about no great events, nor put in motion powerful masses of men; they have acted only by underhanded, obscure and subordinate means; by ways which are nothing suited to strike the imagination, to conciliate that public interest which attaches to great things, whatever may be their principle or end. The party against which they struggled, on the contrary, not only conquered, but conquered with splendor; it did great things, and by great means; it aroused the people, it gave to Europe great men, and changed, in the face of day, the fashion and form of states. In a word, everything was against the Jesuits, both fortune and appearances; neither good sense, which desires success, nor imagination, which requires splendor, was satisfied by their career. And yet nothing can be more certain than that they have had grandeur; that a great idea is attached to their name, their influence, and their history. How so?

It is because they knew what they were doing, and what they

desired to do; because they had a full and clear acquaintance with the principles upon which they acted, and the aim to which they tended; that is to say, they had greatness of thought and greatness of will, and this saved them from the ridicule which attaches itself to constant reverses and contemptible means. Where, on the contrary, the event was greater than the thought, where the actors appeared to want a knowledge of the first principles and last results of their action, there remained something incomplete, inconsistent and narrow, which placed the conquerors themselves in a sort of rational and philosophical inferiority, of which the influence has been sometimes felt in events. This was, I conceive, in the struggle of the old against the new spiritual order, the weak side of the reformation, the circumstance which often embarrassed it, and hindered it from defending itself as it ought to have done.

We might consider the religious revolution of the sixteenth century under many other aspects. I have said nothing, and have nothing to say, concerning its dogmas, concerning its effect on religion, in regard to the relations of the human soul with God and the eternal future; but I might exhibit it to you in the diversity of its relations with the social order, bringing on, in all directions, results of mighty importance. For instance, it awoke religion amid the laity, and in the world of the faithful. Up to that time religion had been, so to speak, the exclusive domain of the clergy, of the ecclesiastical order, who distributed the fruits but disposed themselves of the tree, and had almost alone the right to speak of it. The reformation caused a general circulation of religious creeds; it opened to believers the field of faith, which hitherto they had had no right to enter. It had, at the same time, a second result—it banished, or nearly banished, religion from politics; it restored the independence of the temporal power. At the very moment when, so to speak, religion came again to the possession of the faithful, it quitted the government of society. In the reformed countries, notwithstanding the diversity of ecclesiastical constitutions, even in England, where that constitution is nearer to the ancient order of things, the spiritual power no longer makes any serious pretensions to the direction of the temporal power.

I might enumerate many other consequences of the reformation, but I must check myself, and rest content with having placed before you its principal character, the emancipation of the human mind, and the abolition of absolute power in the spiritual order—an abolition which, no doubt, was not complete, but nevertheless formed the greatest step that has, up to our days, been taken in this direction.

Before concluding, I must pray you to remark the striking

similarity of destiny which, in the history of modern Europe, presents itself as existing between the civil and religious societies, in the revolutions to which they have been subject.

The Christian society, as we saw when I spoke of the church, began by being a perfectly free society, and formed solely in virtue of a common creed, without institutions or government, properly so called, and regulated only by moral powers, varying according to the necessity of the moment. Civil society commenced in like manner in Europe, or partially at least, with bands of barbarians; a society perfectly free, each one remaining in it because he thought proper, without laws or constituted powers. At the close of this state, which could not co-exist with any considerable development, religious society placed itself under an essentially aristocratic government; it was the body of the clergy, the bishops, councils and ecclesiastical aristocracy which governed it. A fact of the same kind happened in civil society at the termination of barbarism; it was the lay aristocracy, the lay feudal chiefs, by which it was governed. Religious society left the aristocratic form to assume that of pure monarchy; that is the meaning of the triumph of the court of Rome over the councils and over the European ecclesiastical aristocracy. The same revolution accomplished itself in civil society; it was by the destruction of aristocratical power that royalty prevailed and took possession of the European world. In the sixteenth century, in the bosom of religious society, an insurrection burst forth against the system of pure monarchy, against absolute power in the spiritual order. This revolution brought on, consecrated, and established free inquiry in Europe. In our own days we have seen the same event occurring in the civil order. Absolute temporal power was attacked and conquered. Thus you have seen that the two societies have undergone the same vicissitudes, have been subject to the same revolutions; only religious society has always been the foremost in this career.

We are now in possession of one of the great facts of modern society—namely, free inquiry, the liberty of the human mind. We have seen that, at the same time, political centralization almost everywhere prevailed. In my next lecture I shall treat of the English revolution—that is to say, of the event in which free inquiry and pure monarchy, both results of the progress of civilization, found themselves for the first time in conflict.

THIRTEENTH LECTURE.

YOU have seen that during the sixteenth century all the elements and features that had belonged to former European society resolved themselves into two great facts, free inquiry and the centralization of power. The first prevailed among the clergy, the second among the laity. There simultaneously triumphed in Europe the emancipation of the human mind, and the establishment of pure monarchy.

It was scarcely to be expected but that sooner or later a struggle should arise between these two principles; for they were contradictory; the one was the overthrow of absolute power in the spiritual order, the other was its victory in the temporal; the first paved the way for the decay of the ancient ecclesiastical monarchy, the last perfected the ruin of the ancient feudal and communal liberties. The fact of their advent being simultaneous arose, as you have seen, from the revolution in religious society advancing with a more rapid step than that in the civil society; the one occurred exactly at the time of the enfranchisement of the individual mind, the other not until the moment of the centralization of universal power under one head. The coincidence of these two facts, so far from springing out of their similitude, did not prevent their inconsistency. They were each advances in the course of civilization, but they were advances arising from dissimilar situations, and of a different moral date, if I may be allowed the expression, although contemporary. That they should run against one another before they came to an understanding was inevitable.

Their first collision was in England. In the struggle of free inquiry, the fruit of the reformation, against the ruin of political liberty, the fruit of the triumph of pure monarchy; and in the effort to abolish absolute power, both in the temporal and spiritual orders, we have the purport of the English revolution, its share in the course of our civilization.

The question arises, why should this struggle take place in England sooner than elsewhere? Wherefore should the revolutions in the political order have coincided more closely with those in the moral order in that country than on the continent?

Royalty in England has undergone the same vicissitudes as on the continent. Under the Tudors it attained to a concen-

tration and energy which it has never known since. It does not follow that the despotism of the Tudors was more violent, or that it cost dearer to England than that of their predecessors. I believe that there were at least as many acts of tyranny and instances of vexation and injustice under the Plantagenets as under the Tudors, perhaps even more. And I believe, likewise, that at this era the government of pure monarchy was more harsh and arbitrary on the continent than in England. The new feature under the Tudors was that absolute power became systematic; royalty assumed a primitive and independent sovereignty; it adopted a style hitherto unknown. The theoretical pretensions of Henry VIII, of Elizabeth, of James I, or of Charles I, are entirely different to those of Edward I or Edward III; though the power of these two last kings was neither less arbitrary nor less extensive. I repeat, that it was the principle, the rational system of monarchy, rather than its practical power, which experienced a mutation in England during the sixteenth century; royalty assumed absolute power, and pretended to be superior to all laws, to those even which it had declared should be respected.

Again, the religious revolution was not accomplished in England in the same manner as on the continent; here it was the work of the kings themselves. Not but that in this country, as elsewhere, there had long been the germs of, and even attempts at a popular reformation, which would probably, ere long, have been carried out. But Henry VIII took the initiative; power became revolutionary. The result was that, in its origin, at least, as a redress of ecclesiastical tyranny and abuse, and as the emancipation of the human mind, the reformation was far less complete in England than on the continent. It consulted, and very naturally, the interest of its authors. The king and the retained episcopacy shared the riches and power, the spoils of the preceding government, of the papacy. It was not long before the consequence was felt. It was said that the reformation was finished; yet most of the motives which had made it necessary still existed. It reappeared under a popular form; it exclaimed against the bishops as it had done against the court of Rome; it accused them of being so many popes. As often as the general character of the religious reformation was compromised, whenever there was a question of a struggle with the ancient church, all portions of the reformed party rallied and made head against the common enemy; but the danger passed, the interior struggle recommenced; popular reform again attacked regal and aristocratical reform, denounced its abuses, complained of its tyranny, called upon it for a fulfillment of its promises, and not again to establish the power which it had dethroned.

There was, about the same time, a movement of enfranchisement manifested in civil society, a need for political freedom, till then unknown, or at least powerless. During the sixteenth century the commercial prosperity of England increased with excessive rapidity; at the same time territorial wealth, landed property, in a great measure changed hands. The division of land in England in the sixteenth century, consequent on the ruin of the feudal aristocracy and other causes, too many for present enumeration, is a fact deserving more attention than has yet been given to it. All documents show us the number of landed proprietors increasing to an immense extent, and the larger portion of the lands passing into the hands of the *gentry*, or inferior nobility, and the citizens. The upper house, the higher nobility, was not nearly so rich at the commencement of the seventeenth century as the House of Commons. There was then at the same time a great development of commercial wealth, and a great mutation in landed property. Amid these two influences came a third—the new movement in the minds of men. The reign of Elizabeth is, perhaps, the greatest period of English history for literary and philosophical activity, the era of lofty and fertile imaginations; the Puritans without hesitation followed out all the consequences of a vigorous although narrow doctrine; the opposite class of minds, less moral and more free, strangers to any principle or method, received with enthusiasm everything which promised to satisfy their curiosity or feed their excitement. Wherever the impulse of intelligence brings with it a lively pleasure, liberty will soon become a want, and will quickly pass from the public mind into the government.

There was on the Continent, in some of those countries where the reformation had gone forth, a manifestation of a similar feeling, a certain want of political liberty; but the means of satisfying it were wanting; they knew not where to look for it; no aid for it could be found either in the institutions or in manners; they remained vague and uncertain, seeking in vain to satisfy their want. In England, it was very different: there the spirit of political freedom, which reappeared in the sixteenth century, following the reformation, found its fulcrum and the means of action in the ancient institutions and social conditions.

Every one knows the origin of the free institutions of England; it is universally known how the union of the great barons in 1215 forced *Magna Charta* from King John. What is not so generally known is that the great charter was from time to time recalled and again confirmed by most of the succeeding kings. There were more than thirty confirmations of it between the thirteenth and the sixteenth centuries. And not only was the charter confirmed, but new statutes were introduced for the purpose of maintaining and developing it. It therefore

lived, as it were, without interval or interruption. At the same time, the House of Commons was formed, and took its place among the supreme institutions of the country. It was under the Plantagenets that it truly struck root; not that it took any great part in the state during that period; the government did not, properly speaking, belong to it even in the way of influence; it only interfered therein at the call of the king, and then always reluctantly and hesitatingly, as if it was more fearful of engaging and compromising itself than desirous of augmenting its power. But when the matter in hand was the defence of private rights, the families of fortunes of the citizens, in a word, the liberties of the individual, the House of Commons acquitted itself of its duty with much energy and perseverance, and founded all those principles which have become the basis of the English constitution.

After the Plantagenets, and especially under the Tudors, the House of Commons, or rather the entire Parliament, presented itself under a different aspect. It no longer defended the individual liberties, as under the Plantagenets. Arbitrary detentions, the violation of private rights, now become much more frequent, are often passed over in silence. On the other hand, the Parliament took a much more active part in the general government of the state.

In changing the religion, and in regulating the order of succession, Henry VIII had need of some medium, some public instrument, and in this want he was supplied by the Parliament, and especially by the House of Commons. Under the Plantagenets it had been an instrument of resistance, the guardian of private rights; under the Tudors it became an instrument of government and general policy; so that at the end of the sixteenth century, although it had undergone almost every species of tyranny, its importance was much augmented, its great power began, that power upon which the representative government depends.

When we glance at the state of the free institutions of England at the end of the sixteenth century, we find first, fundamental rules and principles of liberty, of which neither the country nor the legislature had ever lost sight; second, precedents, examples of liberty, a good deal mixed, it is true, with inconsistent examples and precedents, but sufficing to legalize and sustain the claims, and to support the defenders of liberty in any struggle against tyranny or despotism; third, special and local institutions, replete with germs of liberty; the jury, the right of assembling, and of being armed; the independence of municipal administrations and jurisdictions; fourth, and last, the Parliament and its power, of which the crown had more need than ever, since it had lavished away the greater part of its in-

dependent revenues, domains, feudal rights, etc., and was dependent for its very support upon the national vote.

The political condition of England, therefore, in the sixteenth century was wholly different from that of the continent. In spite of the tyranny of the Tudors, and the systematic triumph of pure monarchy, there was still a fixed fulcrum, a sure means of action for the new spirit of liberty.

There were, then, two national wants in England at this period: on one side was the need of religious revolution and liberty in the heart of the reformation already commenced; and on the other, was required political liberty in the heart of the pure monarchy then in progress; and in the course of their progress these two wants were able to invoke all that had already been done in either direction. They combined. The party who wished to pursue religious reformation invoked political liberty to the assistance of its faith and conscience against the king and the bishops. The friends of political liberty again sought the aid of the popular reformation. The two parties united to struggle against absolute power in the temporal and in the spiritual orders, a power now concentrated in the hands of the king. This is the origin and purport of the English revolution.

It was thus essentially devoted to the defence or achievement of liberty. For the religious party it was a means, and for the political party an end; but with both liberty was the question, and they were obliged to pursue it in common. There was no real religious quarrel between the Episcopal and Puritan party; little dispute upon dogmas, or concerning faith; not but there existed real differences of opinion between them, differences of great importance; but this was not the principal point. Practical liberty was what the Puritans wished to force from the Episcopal party: it was for this that they strove. There was also another religious party who had to found a system, to establish its dogmas, ecclesiastical constitution, and discipline; this was the Presbyterian party: but although it worked to the utmost of its power, it did not in this point progress in proportion to its desire. Placed on the defensive, oppressed by the bishops, unable to act without the assent of the political reformers, its allies and chief supporters, its dominant aim was liberty, the general interest and common aim of all the parties, whatever their diversity, who concurred in the movement. Taking everything together, the English revolution was essentially political; it was brought about in the midst of a religious people and in a religious age; religious thoughts and passions were its instruments; but its chief design and definite aim were political, were devoted to liberty, and the abolition of all absolute power.

I shall now glance at the different phases of this revolution and its great parties; I shall then connect it with the general course of European civilization; I shall mark its place and influence therein; and show you by a detail of the facts, as at the first view, that it was the first blow which had been struck in the cause of free inquiry and pure monarchy, the first manifestation of a struggle between these two great powers.

Three principal parties sprung up in this great crisis, three revolutions in a manner were comprised in it, and successively appeared upon the scene. In each party, and in each revolution, two parties are allied, and work conjointly, a political and a religious party; the first at the head, the second followed, but each necessary to the other; so that the twofold character of the event is impressed upon all its phases.

The first party which appeared was the party of legal reform, under whose banner all the others at first ranged themselves. When the English revolution commenced, when the Long Parliament was assembled in 1640, it was universally said, and by many sincerely believed, that the legal reform would suffice for all things; that in the ancient laws and customs of the country there was that which would remedy all abuses, and which would re-establish a system of government entirely conformable to the public wishes. This party loudly censured and sincerely wished to prevent the illegal collecting of taxes, arbitrary imprisonments, in a word, all acts disallowed by the known laws of the country. At the root of its ideas was the belief in the king's sovereignty—that is, in absolute power. A secret instinct warned it, indeed, that there was something false and dangerous therein; it wished, therefore, to say nothing of it; pushed to the extremity, however, and forced to explain itself, it admitted in royalty a power superior to all human origin, and above all control, and, when need was, defended it. It believed at the same time that this sovereignty, absolute in theory, was bound to observe certain forms and rules; that it could not extend beyond certain limits; and these rules, forms, and limits were sufficiently established and guaranteed in the great charter, in the confirmatory statutes, and in the ancient laws of the country. Such was its political idea. In religious matters, the legal party thought that the Episcopal power was excessive; that the bishops had too much political power, that their jurisdiction was too extensive, and that it was necessary to overlook and restrain its exercise. Still, it firmly supported the episcopacy, not only as an ecclesiastical institution, and as a system of church government, but as a necessary support for the royal prerogative, as a means of defending and maintaining the supremacy of the king in religious matters. The sovereignty of the king in the political order being exercised according to

known forms, and within the limits of acknowledged rules, royalty in the religious order should be sustained by the episcopacy ; such was the twofold system of the legal party, of which the chiefs were Clarendon, Colepepper, Lord Capel, and Lord Falkland himself, although an ardent advocate of public liberty, and a man who numbered in his ranks almost all the high nobility who were not servilely devoted to the court.

Behind these followed a second party, which I shall call the party of the political revolution ; these were of opinion that the ancient guarantees and legal barriers had been and still were insufficient ; that a great change, a regular revolution was necessary, not in the forms, but in the realities of government : that it was necessary to withdraw from the king and his counsel the independence of their power, and to place the political preponderance in the House of Commons ; that the government, properly so called, should belong to this assembly and its chiefs. This party did not give an account of their ideas and intentions as clearly and systematically as I have done ; but this was the essence of its doctrines, of its political tendencies. Instead of the sovereignty of the king, pure monarchy, it believed in the sovereignty of the House of Commons as the representative of the country. Under this idea was hidden that of the sovereignty of the people, an idea, the bearing of which and its consequences, the party was very far from contemplating, but which presented itself, and was received under the form of the sovereignty of the House of Commons.

A religious party, that of the Presbyterians, was closely united with the party of the political revolution. The Presbyterians wished to bring about in the church a revolution analogous to that meditated by their allies in the state. They wished to govern the church by assemblies, giving the religious power to an hierarchy of assemblages agreeing one with the other, as their allies had invested the House of Commons with the political power. But the Presbyterian revolution was more vigorous and complete, for it tended to change the form as well as the principle of the government of the church, while the political party wished only to moderate the influences and preponderating power of institutions, and did not meditate an overthrow of the form of the institutions themselves.

But the chiefs of the political party were not all of them favorable to the Presbyterian organization of the church. Many of them, as for instance, Hampden and Holles, would have preferred, it seems, a moderate episcopacy, confined to purely ecclesiastical duties, and more freedom of conscience. But they resigned themselves to it, being unable to do without their fanatical allies.

A third party was yet more exorbitant in its demands : this

party asserted that an entire change was necessary, not only in the form of government, but in government itself ; that the whole political constitution was bad. This party repudiated the past ages of England, renounced the national institutions and memories, with the intention of founding a new government, according to a pure theory, or what it supposed to be such. It was not a mere reform in the government, but a social revolution which this party wished to bring about. The party of which I just now spoke, that of the political revolution, wished to introduce important changes in the relations between the Parliament and the crown ; it wished to extend the power of Parliament, particularly that of the House of Commons, giving them the nomination to high public offices, and the supreme direction in general affairs ; but its project of reform extended very little further than this. For instance, it had no idea of changing the electoral, judicial or municipal and administrative systems of the country. The republican party meditated on all these changes, and proclaimed their necessity ; and, in a word, wished to reform, not only the public administration, but also the social relations and the distribution of private rights.

This party, like that which preceded it, was partly religious and partly political. The political portion included the republicans, properly so called, the theorists, Ludlow, Harrington, Milton, etc. On that side were ranged the republicans from interest, the chief officers of the army, Ireton, Cromwell, and Lambert, who, more or less sincere at the onset, were soon swayed and guided by interested views and the necessities of their situations. Around these collected the religious republican party, which included all those enthusiasts who acknowledged no legitimate power except that of Jesus Christ, and who, while waiting for his advent, wished to be governed by his elect. And, lastly, the party was followed by a large number of inferior free-thinkers, and fantastical dreamers, the one set in hope of license, the other of equality of property and universal suffrage.

In 1653, after a struggle of twelve years, all these parties had successively failed ; at least, they had reason to believe they had failed, and the public was convinced of their failure. The legal party, which quickly disappeared, had seen the ancient laws and constitution disdained and trodden under foot, and innovation visible upon every side. The party of political reform saw parliamentary forms perish under the new use which they wished to make of them ; they saw the House of Commons, after a sway of twelve years, reduced by the successive expulsion of the royalists and the Presbyterians to a very trifling number of members, and those looked upon by the public with contempt and detestation, and incapable of governing. The republican party seemed to have succeeded better : it remained, to all appearance, master

of the field of battle, of power ; the House of Commons reckoned no more than from fifty to sixty members, and all of these were republicans. They might fairly deem themselves and declare themselves masters of the country. But the contrary absolutely rejected them ; they could nowhere carry their resolutions into effect ; they exercised no practical influence either over the army or over the people. There no longer subsisted any social tie, any social security ; justice was no longer administered, or, if it was, it was no longer justice, but the arbitrary rendering of decrees at the dictation of passion, prejudice, party. And not only was there an entire disappearance of security from the social relations of men, there was none whatever on the highways, which were covered with thieves and robbers ; material anarchy, as well as moral anarchy, manifested itself in every direction, and the House of Commons and the Republican Council were wholly incapable of repressing either the one or the other.

The three great parties of the revolution had thus been called successively to conduct it, to govern the country according to their knowledge and will, and they had not been able to do it ; they had all three of them completely failed ; they could do nothing more. "It was then," says Bossuet, "that a man was found who left nothing to fortune which he could take from it by council or foresight ;" an expression full of error, and controverted by all history. Never did man leave more to fortune than Cromwell ; never has man hazarded more, gone on with more temerity, without design or aim, but determined to go as far as fate should carry him. An unlimited ambition, an admirable faculty of extracting from every day and circumstance some new means of progress, the art of turning chance to profit, without pretending to rule it—all these were Cromwell's. It was with Cromwell, as perhaps it has been with no other man in his circumstances ; he sufficed for all the most various phases of the revolution ; he was a man for its first and latest epochs ; first of all, he was the leader of insurrection, the abettor of anarchy, the most fiery of the English revolutionists ; afterward the man for the anti-revolutionary reaction, for the re-establishment of order, and for social organization ; thus performing singly all the parts which, in the course of revolutions, are divided among the greatest actors. One can hardly say that Cromwell was a Mirabeau ; he wanted eloquence, and, although very active, did not make any show during the first years of the Long Parliament. But he was successively a Danton and a Bonaparte. He, more than any others, had contributed to the overthrow of power ; and he raised it up again because none but he knew how to assume and manage it ; some one must govern ; all had failed, and he succeeded. That constituted his title. Once master of the government, this man, whose ambition had

shown itself so bold and insatiable, who, in his progress had always driven fortune before him, determined never to stop, now displayed a good sense, prudence, and knowledge of the possible, which dominated all his most violent passions. He had, no doubt, a great love for absolute power and a strong desire to place the crown on his own head and establish it in his family. He renounced this last design, the danger of which he saw in time ; and, as to the absolute power, although, in fact, he exercised it, he always knew that the tendency of his age was against it ; that the revolution in which he had co-operated and which he had followed through all its phases, had been directed against despotism, and that the imperishable desire of England was to be governed by a parliament and in parliamentary forms. Therefore, he himself, a despot by inclination and in fact, undertook to have a parliament and to govern in a parliamentary manner. He addressed himself unceasingly to all parties ; he endeavored to form a parliament of religious enthusiasts, of republicans, of Presbyterians, of officers of the army. He attempted all means to constitute a parliament which could and would co-operate with him. He tried in vain : all parties, once seated in Westminster, wished to snatch from him the power which he exercised, and rule in their turn. I do not say that his own interest and personal passion were not first in his thoughts ; but it is not therefore the less certain that, if he had abandoned power, he would have been obliged to take it up again the next day. Neither Puritans nor royalists, republicans nor officers, none, besides Cromwell, was in condition to govern with any degree of order or justice. The proof had been shown. It was impossible to allow the Parliament, that is to say, the parties sitting in Parliament, to take the empire which they could not keep. Such, then, was the situation of Cromwell ; he governed according to a system which he knew very well was not that of the country ; he exercised a power acknowledged as necessary, but accepted by no one. No party regarded his dominion as a definitive government. The royalists, the Presbyterians, the republicans, the army itself, the party which seemed most devoted to Cromwell, all were convinced that he was but a transitory master. At bottom he never reigned over men's minds ; he was never anything but a make-shift, a necessity of the moment. The protector, the absolute master of England, was all his life obliged to employ force in order to protect his power ; no party could govern like him, but no party wished him for governor : he was constantly attacked by all parties at once.

At his death the republicans alone were in a condition to seize upon power ; they did so, and succeeded no better than they had done before. This was not for want of confidence, at least as regards the fanatics of the party. A pamphlet of Milton, pub-

lished at this period and full of talent and enthusiasm, is entitled, "A ready and easy way to establish a free commonwealth." You see what was the blindness of these men. They very soon fell again into that impossibility of governing which they had already experienced. Monk undertook the conduct of the event which all England looked for. The restoration was accomplished.

The restoration of the Stuarts in England was a deeply national event. It presented itself with the advantages at once of an ancient government, of a government which rests upon its traditions, upon the recollections of the country and with the advantages of a new government, of which no recent trial has been made and of which the faults and weight have not been experienced. The ancient monarchy was the only species of government which for the last twenty years had not been despised for its incapacity and ill-success in the administration of the country. These two causes rendered the restoration popular ; it had nothing to oppose it but the remnants of violent parties, and the public rallied around it heartily. It was, in the opinion of the country, the only means of legal government ; that is to say, of that which the country most ardently desired. This was also what the restoration promised, and it was careful to present itself under the aspect of a legal government.

The first royalist party which, at the return of Charles II, undertook the management of affairs was, in fact, the legal party, represented by its most able chief, the Chancellor Clarendon. You are aware that, from 1660 to 1667, Clarendon was prime minister, and the truly predominating influence in England. Clarendon and his friends reappeared with their ancient system, the absolute sovereignty of the king, kept within legal limits, and restrained, in matters of taxation, by Parliament, and in matters of private rights and individual liberties, by the tribunals ; but possessing, as regards government, properly so called, an almost complete independence, the most decisive preponderance, to the exclusion, or even against the wishes of the majority in Parliament, especially in the House of Commons. As to the rest, they had a due respect for legal order, a sufficient solicitude for the interests of the country, a noble sentiment of its dignity, and a grave and honorable moral tone ; such was the character of Clarendon's administration of seven years.

But the fundamental ideas upon which this administration rested, the absolute sovereignty of the king, and the government, placed beyond the influence of the preponderating opinion of Parliament, these ideas, I say, were obsolete, impotent. In spite of the reaction of the first moments of the restoration, twenty years of parliamentary rule, in opposition to royalty, had irremediably ruined them. A new element soon burst forth in the center of the royalist party : free-thinkers, rakes and liber-

tines, who participated in the ideas of the time, conceived that power was vested in the Commons, and caring very little for legal order or the absolute sovereignty of the king, troubled themselves only for their own success, and sought it whenever they caught a glimpse of any means of influence or power. These formed a party which became allied with the national discontented party, and Clarendon was overthrown.

Thus arose a new system of government, namely, that of that portion of the royalist party which I have now described: profligates and libertines formed the ministry, which is called the ministry of the Cabal, and many other administrations which succeeded it. This was their character; no care for principles, laws or rights; as little for justice and for truth; they sought upon each occasion to discover the means of succeeding; if success depended upon the influence of the Commons, they chimed in with their opinions; if it seemed expedient to flout the House of Commons, they did so, and begged its pardon on the morrow. Corruption was tried one day, flattery of the national spirit, another; there was no regard paid to the general interests of the country, to its dignity, or to its honor; in a word, their government was profoundly selfish and immoral, a stranger to all public doctrine or views; but at bottom, and in the practical administration of affairs, very intelligent and liberal. Such was the character of the Cabal, of the ministry of the Earl of Danby, and of the entire English government, from 1667 to 1678. Notwithstanding its immorality, notwithstanding its contempt of the principles and the true interests of the country, this government was less odious and less unpopular than the ministry of Clarendon had been: and why? because it was much better adapted to the times, and because it better understood the sentiments of the people, even in mocking them. It was not antiquated and foreign to them, like that of Clarendon; and though it did the country much more harm, the country found it more agreeable. Nevertheless, there came a moment when corruption, servility and contempt of rights and public honor were pushed to such a point that the people could no longer remain resigned. There was a general rising against the government of the profligates. A national and patriotic party had formed itself in the bosom of the House of Commons. The king decided upon calling its chiefs to the council. Then came to the direction of affairs Lord Essex, the son of him who had commanded the first parliamentary armies during the civil war, Lord Russell, and a man who, without having any of their virtues, was far superior to them in political ability, Lord Shaftesbury. Brought thus to the management of affairs, the national party showed itself incompetent; it knew not how to possess itself of the moral force of the country; it knew not how to treat the interests either of the king, the court or of any of those with whom it had to do. It gave to no one;

neither to the people nor to the king, any great notion of its ability and energy. After remaining a short time in power, it failed. The virtue of its chiefs, their generous courage, the nobleness of their deaths, have exalted them in history, and have justly placed them in the highest rank; but their political capacity did not answer to their virtue, and they knew not how to wield the power which could not corrupt them, nor to secure the triumph of the cause for the sake of which they knew how to die.

This attempt having failed, you perceive the condition of the English restoration; it had, after a manner, and like the revolution, tried all parties and all ministries, the legal ministry, the corrupted ministry, and the national ministry, but none had succeeded. The country and the court found themselves in much the same situation as that of England in 1653, at the end of the revolutionary tempest. Recourse was had to the same expedient; what Cromwell had done for the good of the revolution, Charles II did for the good of his crown; he entered the career of absolute power.

James II succeeded his brother. Then a second question was added to that of absolute power; namely, the question of religion. James II desired to bring about the triumph of popery as well as that of despotism. Here, then, as at the beginning of the revolution, we have a religious and a political warfare, both directed against the government. It has often been asked, what would have happened had William III never existed, or had he not come with his Hollanders to put an end to the quarrel which had arisen between James II and the English nation? I firmly believe that the same event would have been accomplished. All England, except a very small party, had rallied, at this epoch, against James, and, under one form or another, it would have accomplished the revolution of 1688. But this crisis was produced by other and higher causes than the internal state of England. It was European as well as English. It is here that the English revolution connects itself by facts themselves, and independently of the influence which its example may have had with the general course of European civilization.

While this struggle, which I have sketched in outline, this struggle of absolute power against civil and religious liberty, was taking place in England, a struggle of the same kind was going on upon the continent, very different, indeed, as regards the actors, forms and theater, but at bottom the same, and originated by the same cause. The pure monarchy of Louis XIV endeavored to become an universal monarchy; at least it gave reason for the fear that such was the case; and, in fact, Europe did fear that it was. A league was made in Europe, between various political parties, in order to resist this attempt, and the chief of this league was the chief of the party in favor of

civil and religious liberty upon the continent, William, Prince of Orange. The Protestant republic of Holland, with William at its head, undertook to resist the pure monarchy represented and conducted by Louis XIV. It was not civil and religious liberty in the interior of the states, but their external independence which was apparently the question. Louis XIV and his adversaries did not imagine that, in fact, they were contesting between them the question which was being contested in England. This struggle went on, not between parties, but between states; it proceeded by war and diplomacy, not by political movements and by revolutions. But, at bottom, one and the same question was at issue.

When, therefore, James II resumed in England the contest between absolute power and liberty, this contest occurred just in the midst of the general struggle which was going on in Europe between Louis XIV and the Prince of Orange, the representatives, severally, of the two great systems at war upon the banks of the Scheldt, as well as on those of the Thames. The league was so powerful against Louis XIV that, openly, or in a hidden but very real manner, sovereigns were seen to enter it, who were assuredly very far from being interested in favor of civil and religious liberty. The emperor of Germany and Pope Innocent XI supported William III against Louis XIV. William passed into England, less in order to serve the internal interests of the country than to draw it completely into the struggle against Louis XIV. He took this new kingdom as a new power of which he was in want, and of which his opponent had, up to that time, made use against them. While Charles II and James II reigned, England belonged to Louis XIV; he had directed its external relations, and had constantly opposed it to Holland. England was now snatched from the party of pure and universal monarchy in order to become the instrument and strongest support of the party of religious liberty. This is the European aspect of the revolution of 1688; it was thus that it occupied a place in the total result of the events of Europe, independently of the part which it played by means of its example, and the influence which it exercised upon minds in the following century.

Thus you see that, as I told you in the beginning, the true meaning and essential character of this revolution was the attempt to abolish absolute power in temporal as well as spiritual things. This act discovers itself in all the phases of the revolution—in its first period up to the restoration, in the second up to the crisis of 1688—and whether we consider it in its internal development or in its relations with Europe in general.

It now remains for us to study the same great event upon the continent, the struggle of pure monarchy and free inquiry, or, at least, its causes and approaches. This will be the subject of our next lecture.

FOURTEENTH LECTURE.

IN my last lecture I endeavored to determine the true character and political meaning of the English revolution. We have seen that it was the first shock of the two great facts to which all the civilization of primitive Europe reduced itself in the course of the sixteenth century, namely, pure monarchy on one hand and free inquiry on the other; those two powers came to strife for the first time in England. Attempts have been made to infer from this fact the existence of a radical difference between the social state of England and that of the continent; some have pretended that no comparison was possible between countries of destinies so different; they have affirmed that the English people had existed in a kind of moral isolation analogous to its material situation.

It is true that there had been an important difference between English civilization and the civilization of the continental states—a difference which we are bound to calculate. You have already, in the course of my lectures, been enabled to catch a glimpse of it. The development of the different principles and elements of society occurred in England simultaneously, and, as it were, abreast; at least far more so than upon the continent. When I attempted to determine the peculiar physiognomy of European civilization as compared with the ancient and Asiatic civilizations, I showed you the first, varied, rich and complex; that it never fell under the dominion of an exclusive principle; that therein the various elements of the social state were modified, combined, and struggled with each other, and had been constantly compelled to agree and live in common. This fact, the general characteristic of European civilization, has above all characterized the English civilization; it was in England that this character developed itself with the most continuity and obviousness; it was there that the civil and religious orders, aristocracy, democracy, royalty, local and central institutions, moral and political developments, progressed and increased together, pell-mell, so to speak, and if not with an equal rapidity, at least always within a short distance of each other. Under the reign of the Tudors, for instance, in the midst of the most brilliant progress of pure monarchy, we see the democratical principle, the popular power, arising and strengthening itself at the same

time. The revolution of the seventeenth century burst forth; it was at the same time religious and political. The feudal aristocracy appeared here in a very weakened condition, and with all the symptoms of decline; nevertheless, it was ever in a position to preserve a place and play an important part therein, and to take its share in the results. It is the same with the entire course of English history: never has any ancient element completely perished; never has any new element wholly triumphed, or any special principle attained to an exclusive preponderance. There has always been a simultaneous development of different forces, a compromise between their pretensions and their interests.

Upon the continent the progress of civilization has been much less complex and complete. The various elements of society—the religious and civil orders—monarchy, aristocracy and democracy, have developed themselves, not together and abreast, but in succession. Each principle, each system has had, after a certain manner, its turn. Such a century belongs, I will not say exclusively, which would be saying too much, but with a very marked preponderance, to feudal aristocracy, for example; another belongs to the monarchical principle; a third to the democratical system.

Compare the French with the English middle ages, the eleventh, twelfth and thirteenth centuries of our history with the corresponding centuries beyond the channel; you will find that at this period in France feudalism was almost absolutely sovereign, while royalty and the democratical principle were next to nullities. Look to England: it is, indeed, the feudal aristocracy which predominates; but royalty and democracy were nevertheless powerful and important.

Royalty triumphed in England under Elizabeth, as in France under Louis XIV; but how many precautions was it obliged to take; to how many restrictions—now from the aristocracy, now from the democracy, did it submit! In England, also, each system and each principle has had its day of power and success, but never so completely, so exclusively as upon the continent; the conqueror has always been compelled to tolerate the presence of his rivals, and to allow each his share.

With the differences in the progress of the two civilizations are connected advantages and disadvantages, which manifest themselves, in fact, in the history of the two countries. There can be no doubt, for instance, but that this simultaneous development of the different social elements greatly contributed to carry England, more rapidly than any other of the continental states, to the final aim of all society—namely, the establishment of a government at once regular and free. It is precisely the nature of a government to concern itself for all interests and all powers,

to reconcile them, and to induce them to live and prosper in common ; now, such, beforehand, by the concurrence of a multitude of causes, was the disposition and relation of the different elements of English society ; a general and somewhat regular government had therefore less difficulty in becoming constituted there. So the essence of liberty is the manifestation and simultaneous action of all interests, rights, powers and social elements. England was therefore much nearer to its possessions than the majority of other states. For the same reasons, national good sense, the comprehension of public affairs, necessarily formed themselves there more rapidly than elsewhere ; political good sense consists in knowing how to estimate all facts, to appreciate them, and render to each its share of consideration ; this, in England, was a necessity of the social state, a natural result of the course of civilization.

On the other hand, in the continental states, each system, each principle having had its turn, having predominated after a more complete and more exclusive manner, its development was wrought upon a larger scale, and with more grandeur and brilliancy. Royalty and feudal aristocracy, for instance, came upon the continental stage with far greater boldness, extension and freedom. Our political experiments, so to speak, have been broader and more finished : the result of this has been that political ideas (I speak of general ideas, and not of good sense applied to the conduct of affairs) and political doctrines have risen higher, and displayed themselves with much more rational vigor. Each system having, in some measure, presented itself alone, and having remained a long time upon the stage, men have been enabled to consider it in its entirety, to mount up to its first principles, to follow it out into its last consequences, and fully to unfold its theory. Whoever attentively observes the English character must be struck with a twofold fact—on the one hand, with the soundness of its good sense and its practical ability ; on the other, with its lack of general ideas, and its pride as to theoretical questions. Whether we open a work upon English history, upon jurisprudence, or any other subject, it is rarely that we find the grand reason of things, the fundamental reason. In all things, and especially in the political sciences, pure doctrine, philosophy and science, properly so called, have prospered much better on the continent than in England ; their flights have, at least, been far more powerful and bold ; and we cannot doubt but that the different developments of civilization in the two countries have greatly contributed to this result.

For the rest, whatever we may think of the advantages or disadvantages which this difference has entailed, it is a real and incontestable fact, the fact which most deeply distinguishes England from the continent. But it does not follow, because

the different principles and social elements have been there developed more simultaneously, here more successively, that, at bottom, the path and the goal have not been one and the same. Considered in their entirety, the continent and England have traversed the same grand phases of civilization; events have, in either, followed the same course, and the same causes have led to the same effects. You have been enabled to convince yourselves of this fact from the picture which I have placed before you of civilization up to the sixteenth century, and you will equally recognize it in studying the seventeenth and eighteenth centuries. The development of free inquiry, and that of pure monarchy, almost simultaneous in England, accomplished themselves upon the continent at long intervals; but they did not accomplish themselves, and the two powers, after having successively preponderated with splendor, came equally, at last, to blows. The general path of societies, considering all things, has thus been the same, and though the points of difference are real, those of resemblance are more deeply seated. A rapid sketch of modern times will leave you in no doubt upon this subject.

Glancing over the history of Europe in the seventeenth and eighteenth centuries, it is impossible not to perceive that France has advanced at the head of European civilization. At the beginning of this work I have already insisted upon this fact, and I have endeavored to point out its cause. We shall now find it more striking than ever.

The principle of pure monarchy, of absolute royalty, predominated in Spain under Charles V and Phillip II, before developing itself in France under Louis XIV. In the same manner the principle of free inquiry had reigned in England in the seventeenth century, before developing itself in France in the eighteenth. Nevertheless, pure monarchy and free inquiry came not from Spain and England to take possession of the world. The two principles, the two systems remained, in a manner, confined to the countries in which they had arisen. It was necessary that they should pass through France in order that they might extend their conquests; it was necessary that pure monarchy and free inquiry should become French in order to become European. This communicative character of French civilization, this social genius of France, which has displayed itself at all periods, was thus more than ever manifest at the period with which we now occupy ourselves. I will not further insist upon this fact; it has been developed to you with as much reason of brilliancy in other lectures wherein you have been called upon to observe the influence of French literature and philosophy in the eighteenth century. You have seen that philosophic France possessed more authority over Europe, in

regard to liberty, than even free England. You have seen that French civilization showed itself far more active and contagious than that of any other country. I need not, therefore, pause upon the details of this fact, which I mention only in order to rest upon it any right to confine my picture of modern European civilization to France alone. Between the civilization of France and that of the other states of Europe at this period, there have, no doubt, been differences, which it would have been necessary to bear in mind, if my present purpose had been a full and faithful exposition of the history of those civilizations; but I must go on so rapidly that I am compelled to omit entire nations and ages, so to speak. I choose rather to concentrate your attention for a moment upon the course of French civilization, an image, though imperfect, of the general course of things in Europe.

The influence of France in Europe during the seventeenth and eighteenth centuries, presents itself under very different aspects. In the former it was French government that acted upon Europe and advanced at the head of general civilization. In the latter it was no longer to the government, but France herself, that the preponderance belonged. In the first case, it was Louis XIV and his court, afterward France and her opinion, that governed minds and attracted attention. In the seventeenth century there were peoples who, as peoples, appeared more prominently upon the scene and took a greater part in events, than the French people. Thus, during the thirty years' war, the German nation, in the English revolution, the English people played, in their own destinies, a much greater part than was played at this period by the French in theirs. So, also, in the eighteenth century, there were governments stronger, of greater consideration and more to be dreaded, than the French government. No doubt Frederick II, Catherine II and Maria Theresa, had more influence and weight in Europe than Louis XV; nevertheless, at both periods, it was France that was at the head of European civilization, placed there first, by its government, afterward by itself; now by the political action of its masters, now by its peculiar intellectual development.

In order to fully understand the predominant influence in the course of civilization in France, and therefore in Europe, we must study, in the seventeenth century, French government, in the eighteenth, French society. We must change the plan and the drama according as time alters the stage and the actors.

When we occupy ourselves with the government of Louis XIV, when we endeavor to appreciate the causes of his power and influence in Europe, we scarcely think of anything but his renown, his conquests, his magnificence and the literary glory

of his time. It is to external causes that we apply ourselves and attribute the European preponderance of the French government. But I conceive that this preponderance had deeper and more serious foundations. We must not believe that it was simply by means of victories, *fêtes*, or even master-works of genius, that Louis XIV and his government, at this epoch, played the part which it is impossible to deny them.

Many of you may remember, and all of you have heard speak of the effect which the consular government produced in France twenty-nine years ago, and of the condition in which it found our country. Without was impending foreign invasion, and continual disasters were occurring in our armies; within was an almost complete dissolution of power and of the people; there were no revenues, no public order; in a word, society was prostrate, humiliated and disorganized: such was France on the advent of the consular government. Who does not recall the prodigious and felicitous activity of this government, that activity which, in a little time, secured the independence of the land, revived national honor, reorganized the administration, remodelled the legislation and, after a manner, regenerated society under the hand of power.

Well, the government of Louis XIV when it commenced, did something analogous to this for France; with great differences of times, proceedings and forms, it pursued and attained nearly the same results.

Recall to your memory the state into which France was fallen after the government of Cardinal Richelieu, and during the minority of Louis XIV: the Spanish armies always on the frontiers, sometimes in the interior; continual danger of an invasion; internal dissensions urged to extremity, civil war, the government weak and discredited at home and abroad. Society was perhaps in a less violent, but still sufficiently analogous state to ours, prior to the eighteenth *Brumaire*. It was from this state that the government of Louis XIV extricated France. His first victories had the effect of the victory of Marengo: they secured the country, and retrieved the national honor. I am about to consider this government under its principal aspects—in its wars, in its external relations, in its administration, and in its legislation; and you will see, I imagine, that the comparison of which I speak, and to which I attach no puerile importance (for I think very little of the value of historical parallels), you will see, I say, that this comparison has a real foundation, and that I have a right to employ it.

First of all let us speak of the wars of Louis XIV. The wars of Europe have originated, as you know, and as I have often taken occasion to remind you, in great popular movements. Urged by necessity, caprice, or any other cause, entire popula-

tions, sometimes numerous, sometimes in simple bands, have transported themselves from one territory to another. This was the general character of European wars until after the crusades, at the end of the thirteenth century.

At that time began a species of wars scarcely less different from modern wars than the above. These were the distant wars, undertaken no longer by the people, but by governments, which went at the head of their armies to seek states and adventurers afar off. They quitted their countries, abandoned their own territories, and plunged, some into Germany, others into Italy, and others into Africa, with no other motives than personal caprice. Almost all the wars of the fifteenth and even of a part of the sixteenth century were of this description. What interest—I speak not of legitimate interest—but what possible motive had France that Charles VIII should possess the kingdom of Naples? This evidently was a war dictated by no political consideration: the king conceived that he had a personal right to the kingdom of Naples, and with a personal aim and to satisfy his personal desire, he undertook the conquest of a distant country, which was in no way adapted for annexation to his kingdom; which, on the contrary, did nothing but compromise his power externally, and internally his repose. It was the same with the expedition of Charles the Fifth to Africa. The latest war of this kind was the expedition of Charles XII against Russia. The wars of Louis XIV had no such character; they were the wars of a regular government, fixed in the centre of its states, and laboring to make conquests around it, to extend or consolidate its territory; in a word, they were political wars.

They may have been just or unjust; they may have cost France too dearly; there are a thousand reasons which might be adduced against their morality and their excess; but they bear a character incomparably more rational than the antecedent wars: they were no longer undertaken for whim or adventure; they were dictated by some serious motive; it was some natural limit that it seemed desirable to attain; some population speaking the same language that they aimed at annexing; some point of defence against a neighboring power, which it was thought necessary to acquire. No doubt personal ambition had a share in these wars; but examine one after another of the wars of Louis XIV, particularly those of the first part of his reign, and you will find that they had truly political motives; and that they were conceived for the interest of France, for obtaining power, and for the country's safety.

The results are proofs of the fact. France of the present day is still, in many respects, what the wars of Louis XIV have made it. The provinces which he conquered, Franche-Comté, Flanders and Alsace, remain yet incorporated with France.

There are sensible as well as senseless conquests: those of Louis XIV were of the former species; his enterprises have not the unreasonable and capricious character which, up to this time, was so general; a skilful, if not always just and wise policy, presided over them.

Leaving the wars of Louis XIV, and passing to the consideration of his relations with foreign states, of his diplomacy, properly so called, I find an analogous result. I have insisted upon the occurrence of the birth of diplomacy in Europe at the end of the fifteenth century. I have endeavored to show how the relations of governments and states between themselves, up to that time accidental, rare and transitory, became at this period more regular and enduring, how they took a character of great public interest; how, in a word, at the end of the fifteenth, and during the first half of the sixteenth century, diplomacy came to play an immense part in events. Nevertheless, up to the seventeenth century, it had not been, truly speaking, systematic; it had not led to long alliances, or to great, and, above all, durable combinations, directed, according to fixed principles, toward a constant aim, with that spirit of continuity which is the true character of established governments. During the course of the religious revolution, the external relations of states were almost completely under the power of the religious interest; the Protestant and Catholic leagues divided Europe. It was in the seventeenth century, after the treaty of Westphalia, and under the influence of the government of Louis XIV, that diplomacy changed its character. It then escaped from the exclusive influences of the religious principle; alliances and political combinations were formed upon other considerations. At the same time it became much more systematic, regular, and constantly directed toward a certain aim, according to permanent principles. The regular origin of this system of balance in Europe belongs to this period. It was under the government of Louis XIV that the system, together with all the considerations attached to it, truly took possession of European policy. When we investigate what was the general idea in regard to this subject, what was the predominating principle of the policy of Louis XIV, I believe that the following is what we discover:

I have spoken of the great struggle between the pure monarchy of Louis XIV, aspiring to become universal monarchy, and civil and religious liberty, and the independence of states, under the direction of the Prince of Orange, William III. You have seen that the great fact of this period was the division of the powers under these two banners. But this fact was not then estimated as we estimate it now; it was hidden and unknown even to those who accomplished it; the suppression of the system of pure monarchy and the consecration of civil and re-

ligious liberty were, at bottom, the necessary result of the resistance of Holland and its allies to Louis XIV, but the question was not thus openly enunciated between absolute power and liberty. It has been often said that the propagation of absolute power was the predominant principle of the diplomacy of Louis XIV; but I do not believe it. This consideration played no very great part in his policy, until latterly, in his old age. The power of France, its preponderance in Europe, the humbling of rival powers, in a word, the political interest and strength of the state, was the aim which Louis XIV constantly pursued, whether in fighting against Spain, the Emperor of Germany or England; he acted far less with a view to the propagation of absolute power than from a desire for the power and aggrandizement of France and of its government. Among many proofs, I will adduce one which emanates from Louis XIV himself. In his *Memoirs*, under the year 1666, if I remember right, we find a note nearly in these words:

"I have had, this morning, a conversation with Mr. Sidney, an English gentleman, who maintained to me the possibility of reanimating the republican party in England. Mr. Sidney demanded from me, for that purpose, 400,000 livres. I told him that I could give no more than 200,000. He induced me to summon from Switzerland another English gentleman named Ludlow, and to converse with him of the same design."

And, accordingly, we find among the *Memoirs* of Ludlow, about the same date, a paragraph to this effect:

"I have received from the French government an invitation to go to Paris, in order to speak of the affairs of my country; but I am distrustful of that government."

And Ludlow remained in Switzerland.

You see that the diminution of the royal power in England was, at this time, the aim of Louis XIV. He fomented internal dissensions, and labored to resuscitate the republican party, to prevent Charles II from becoming too powerful in his country. During the embassy of Barillon in England the same fact constantly reappears. Whenever the authority of Charles seemed to obtain the advantage and the national party seemed on the point of being crushed, the French ambassador directed his influence to this side, gave money to the chiefs of the opposition, and fought, in a word, against absolute power, when that became a means of weakening a rival power to France. Whenever you attentively consider the conduct of external relations under Louis XIV, it is with this fact that you will be the most struck.

You will also be struck with the capacity and skill of French diplomacy at this period. The names of MM. de Torcy, d'Avaux, de Bonrepos, are known to all well-informed persons.

When we compare the despatches, the memoirs, the skill and conduct of these counsellors of Louis XIV with those of Spanish, Portuguese, and German negotiators, we must be struck with the superiority of the French ministers; not only as regards their earnest activity and their application to affairs, but also as regards their liberty of spirit. These courtiers of an absolute king judged of external events, of parties, of the requirements of liberty, and of popular revolutions, much better even than the majority of the English ministers themselves at this period. There was no diplomacy in Europe in the seventeenth century which appears equal to the French, except the Dutch. The ministers of John de Witt and of William of Orange, those illustrious chiefs of the party of civil and religious liberty, were the only ministers who seemed in condition to wrestle with the servants of the great and absolute king.

You see, then, that whether we consider the wars of Louis XIV, or his diplomatical relations, we arrive at the same results. We can easily conceive that a government, which conducted its wars and negotiations in this manner, should have assumed a high standing in Europe, and presented itself therein, not only as dreadworthy, but as skilful and imposing.

Let us now consider the interior of France, the administration and legislation of Louis XIV; we shall there discern new explanations of the power and splendor of his government.

It is difficult to determine with any degree of precision what we ought to understand by *administration* in the government of a state. Nevertheless, when we endeavor to investigate this fact, we discover, I believe, that, under the most general point of view, administration consists in an aggregate of means destined to propel, as promptly and certainly as possible, the will of the central power through all parts of society, and to make the force of society, whether consisting of men or money, return again, under the same conditions, to the central power. This, if I mistake not, is the true aim, the predominant characteristic of administration. Accordingly we find that in times when it is above all things needful to establish unity and order in society, administration is the chief means of attaining this end, of bringing together, of cementing, and of uniting incoherent and scattered elements. Such, in fact, was the work of the administration of Louis XIV. Up to this time, there had been nothing so difficult, in France as in the rest of Europe, as to effect the penetration of the action of the central power into all parts of society, and to gather into the bosom of the central power the means of force existing in society. To this end Louis XIV labored, and succeeded, up to a certain point; incomparably better, at least,

than preceding governments had done. I cannot enter into details: just run over, in thought, all kinds of public services, taxes, roads, industry, military administration, all the establishments which belong to whatsoever branch of administration; there is scarcely one of which you do not find either the origin, development, or great amelioration under Louis XIV. It was as administrators that the greatest men of his time, Colbert and Louvois, displayed their genius and exercised their ministry. It was by the excellence of its administration that his government acquired a generality, decision, and consistency which were wanting to all the European governments around him.

Under the legislative point of view this reign presents to you the same fact. I return to the comparison which I have already made use of, to the legislative activity of the consular government, to its prodigious work of revising and generally recasting the laws. A work of the same nature took place under Louis XIV. The great ordinances which he promulgated, the criminal ordinances, the ordinances of procedure, commerce, the marine, waters, and woods, are true codes, which were constructed in the same manner as our codes, discussed in the council of state, some of them under the presidency of Lamoignon. There are men whose glory consists in having taken part in this labor and this discussion, M. Pussort, for instance. If we were to consider it in itself, we should have much to say against the legislation of Louis XIV; it was full of vices, which now fully declare themselves, and which no one can deny; it was not conceived in the interest of true justice and of liberty, but in the interest of public order, and for giving more regularity and firmness to the laws. But even that was a great progress; and we cannot doubt but that the ordinances of Louis XIV, so very superior to anything preceding them, powerfully contributed to advance French society in the career of civilization.

You see that under whatever point of view we regard this government, we very soon discover the source of its power and influence. It was the first government that presented itself to the eyes of Europe as a power sure of its position, which had not to dispute its existence with internal enemies—tranquil as to its dominions and the people, and intent only on governing. Up to that time all European governments had been unceasingly thrown into wars, which deprived them of security as well as leisure, or had been so beset with parties and internal enemies that they were compelled to spend their time in fighting for their lives. The government of Louis XIV appeared as the first which applied itself solely to the conduct of affairs, as a power at once definitive and progressive; which was not afraid

of innovating, because it could count upon the future. There have, in fact, existed very few governments of such an innovating spirit. Compare it with a government of the same nature, with the pure monarchy of Philip II in Spain; it was more absolute than that of Louis XIV, and yet far less regular and less tranquil. But how did Philip II succeed in establishing absolute power in Spain? By stifling the activity of the country, by refusing to it every species of amelioration, by rendering the condition of Spain completely stationary. The government of Louis XIV, on the contrary, showed itself active in all kinds of innovations, favorable to the progress of letters, of arts, of riches, and, in a word, of civilization. These are the true causes of its preponderance in Europe; a preponderance such that it became upon the continent, during the whole of the seventeenth century, the type of government, not only for sovereigns, but even for nations.

And now we inquire—and it is impossible to help doing so—how it happened that a power, thus brilliant, and, judging from the facts which I have placed before you, thus well established, so rapidly fell into decline? How, after having played such a part in Europe, it became, in the next century, so inconsistent, weak, and inconsiderable? The fact is incontestable. In the seventeenth century the French government was at the head of European civilization; in the eighteenth century it disappeared; and it was French society, separated from its government, often even opposed to it, that now preceded and guided the European world in its progress.

It is here that we discover the incorrigible evil and the infallible effect of absolute power. I will not go into any detail concerning the faults of the government of Louis XIV; he committed many; I will speak neither of the war of the Spanish succession, nor of the revocation of the edict of Nantes, nor of excessive expenses, nor of many other of the fatal measures that compromised his fortunes. I will take the merits of the government as I have described them. I will agree that perhaps there has never existed an absolute power more fully recognized by its age and nation, nor one which has rendered more real services to the civilization of its country and of Europe in general. But, by the very fact that this government had no other principle than absolute power, and reposed upon no other base than this, its decline became sudden and well merited. What France, under Louis XIV, essentially wanted, was political institutions and forces, independent, subsisting of themselves, and, in a word, capable of spontaneous action and resistance. The ancient French institutions, if they merited that name, no longer existed: Louis XIV completed their ruin. He took no care to endeavor to replace them by new institutions;

they would have cramped him, and he did not choose to be cramped. All that appeared conspicuous at that period was will, and the action of central power. The government of Louis XIV was a great fact, a fact powerful and splendid, but without roots.

Free institutions are a guarantee, not only of the wisdom of governments, but also of their duration. No system can endure except by means of institutions. When absolute power has endured, it has been supported by true institutions, sometimes by the division of society into strongly distinct castes, sometimes by a system of religious institutions. Under the reign of Louis XIV institutions were wanting to power as well as to liberty. In France, at this period, nothing guaranteed either the country against the illegitimate actions of the government, or the government itself against the inevitable action of time. Thus we see the government helping on its own decay. It was not Louis XIV alone who was becoming aged and weak at the end of his reign: it was the whole absolute power. Pure monarchy was as much worn out in 1712 as was the monarch himself: and the evil was so much the more grave, as Louis XIV had abolished political morals as well as political institutions. There are no political morals without independence. He alone who feels that he has a strength of his own is always capable either of serving or opposing power. Energetic characters disappear with independent situations, and dignity of soul alone gives birth to security of rights.

This, then, is the state in which Louis XIV left France and power: a society in full development of riches, power and all kinds of intellectual activity; and side by side with this progressive society, a government essentially stationary, having no means of renewing itself, of adapting itself to the movement of its people; devoted, after half a century of the greatest splendor, to immobility and weakness, and already, during the life of its founder, fallen into a decline which seemed like dissolution. Such was the condition of France at the conclusion of the seventeenth century, a condition which impressed the epoch that followed with a direction and a character so different.

I need hardly say that the onward impulse of the human mind, that free inquiry was the predominating feature, the essential fact of the eighteenth century. You have already heard much concerning this fact from this chair; already you have heard that powerful epoch characterized by a philosophical orator, and by that of an eloquent philosopher. I cannot pretend, in the short space of time which remains to me, to trace all the phases of the great moral revolution which then accomplished itself. I would, nevertheless, fain not leave you with-

out calling your attention to some characteristics which have been too little remarked upon.

The first—one which strikes me most, and which I have already mentioned—is the, so to speak, almost complete disappearance of the government in the course of the eighteenth century, and the appearance of the human mind as the principal and almost the only actor.

Except in that which is connected with external relations under the ministry of the Duc de Choiseul, and in certain great concessions made to the general tendency of opinion, for instance, in the American war; except, I say, in some events of this nature, perhaps there has scarcely ever been so inactive, apathetic and inert a government as was the French government of this period. Instead of the energetic, ambitious government of Louis XIV which appeared everywhere, and put itself at the head of everything, you have a government which labored only to hide itself, to keep itself in the background, so weak and compromised did it feel itself to be. Activity and ambition had passed over wholly to the people. It was the nation which, by its opinion and its intellectual movement, mingled itself with all things, interfered in all, and, in short, alone possessed moral authority, which is the only true authority.

A second characteristic which strikes me, in the condition of the human mind in the eighteenth century, is the universality of free inquiry. Up to that time, and particularly in the seventeenth century, free inquiry had been exercised within a limited and partial field; it had had for its object sometimes religious questions, sometimes religious and political questions together, but it did not extend its pretensions to all subjects. In the eighteenth century, on the contrary, the character of free inquiry is universality; religion, politics, pure philosophy, man and society, moral and material nature, all at the same time became the object of study, doubt and system; ancient sciences were overturned, new sciences were called into existence. The movement extended itself in all directions, although it had emanated from one and the same impulse.

This movement, moreover, had a peculiar character; one which, perhaps, is not to be met elsewhere in the history of the world: it was purely speculative. Up to that time, in all great human revolutions, action had commingled itself with speculation. Thus, in the sixteenth century, the religious revolution began with ideas, with purely intellectual discussions, but it very soon terminated in events. The heads of intellectual parties soon became the heads of political parties; the realities of life were mixed with the labor of the understanding. Thus, too, it happened in the seventeenth century, in the Eng-

lish revolution. But in France, in the eighteenth century, you find the human spirit exercising itself upon all things, upon ideas which, connecting themselves with the real interests of life, seemed calculated to have the most prompt and powerful influence upon facts. Nevertheless, the leaders and actors of these great discussions remained strangers to all species of practical activity—mere spectators, who observed, judged and spoke, without ever interfering in events. At no other time has the government of facts, of external realities, been so completely distinct from the government of minds. The separation of the spiritual and temporal orders was never completely real in Europe until the eighteenth century. For the first time, perhaps, the spiritual order developed itself wholly apart from the temporal order; an important fact, and one which exercised a prodigious influence upon the course of events.

It gave to the ideas of the time a singular character of ambition and inexperience; never before had philosophy aspired so strongly to rule the world, never had philosophy been so little acquainted with the world. It became obvious that a day must arrive for coming to facts; for the intellectual movement to pass into external events; and as they had been totally separated, their meeting was the more difficult, the shock far more violent.

How can we now be surprised with another character of the condition of the human mind at this epoch, I mean its prodigious boldness? Up to that time its greatest activity had always been confined by certain barriers; the mind of man had always existed amid facts, whereof some inspired it with caution, and, to a certain extent, checked its movements. In the eighteenth century, I should be at a loss to say what external facts the human mind respected, or what external facts exercised any empire over it; it hated or despised the entire social state. It concluded, therefore, that it was called upon to reform all things; it came to consider itself a sort of creator; institutions, opinions, manners, society, and man himself, all seemed to require reform, and human reason charged itself with the enterprise. What audacity equal to this had ever before been imagined by it!

Such was the power which, in the course of the eighteenth century, confronted what still remained of the government of Louis XIV. You perceive that it was impossible to avoid the occurrence of a shock between these two so unequal forces. The predominant fact of the English revolution, the struggle between free inquiry and pure monarchy, was now also to burst forth in France. No doubt the differences were great, and these necessarily perpetuated themselves in the results; but,

at bottom, the general conditions were similar, and the definitive event had the same meaning.

I do not pretend to exhibit the infinite consequences of this struggle. The time for concluding this course of lectures has arrived; I must check myself. I merely desire, before leaving you, to call your attention to the most grave, and, in my opinion, the most instructive fact which was revealed to us by this great struggle. This is the danger, the evil, and the insurmountable vice of absolute power, whatever form, whatever name it may bear, and toward whatever aim it may direct itself. You have seen that the government of Louis XIV perished by almost this cause only. Well, the power which succeeded it, the human mind, the true sovereign of the eighteenth century, suffered the same fate; in its turn, it possessed an almost absolute power; it, in its turn, placed an excessive confidence in itself. Its onward impulse was beautiful, good, most useful; and were it necessary that I should express a definitive opinion, I should say that the eighteenth century appears to me to have been one of the greatest ages of history, that which, perhaps, has done the greatest services for humanity, that which has in the greatest degree aided its progress, and rendered that progress of the most general character: were I asked to pronounce upon it as a public administration, I should pronounce in its favor. But it is not the less true that, at this epoch, the human mind, possessed of absolute power, became corrupted and misled by it; holding established facts and former ideas in an illegitimate disdain and aversion; an aversion which carried it into error and tyranny. The share of error and tyranny, indeed, which mingled itself with the triumph of human reason, at the end of this century, a portion which we cannot conceal from ourselves, was very great and which we must proclaim and not deny; this portion of error and tyranny was chiefly the result of extravagance into which the mind of man had been thrown, at this period, by the extension of his power.

It is the duty, and, I believe, it will be the peculiar merit of our times, to know that all power, whether intellectual or temporal, whether belonging to governments or people, to philosophers or ministers, whether exercising itself in one cause or in another, bears within itself a natural vice, a principle of weakness and of abuse which ought to render it limited. Now nothing but the general freedom of all rights, all interests and all opinions, the free manifestation and legal co-existence of all these forces, can ever restrain each force and each power within its legitimate limits, prevent it from encroaching on the rest, and, in a word, cause the real and generally profitable existence of free inquiry. Herein consists for us the grand lesson the struggle which occurred at the end of the eighteenth ~

ture, between absolute temporal power and absolute spiritual power.

I have now arrived at the term which I proposed to myself. You remember that my object in commencing this course was to present you with a general picture of the development of European civilization, from the fall of the Roman Empire to our own days. I have traversed this career very rapidly and without being able to inform you, far from it, of all that was important, or to bring proofs of all that I have said. I have been compelled to omit much and often to request you to believe me upon my word. I hope, nevertheless, that I have attained my aim, which was to mark the grand crisis in the development of modern society. Allow me yet one word more.

I endeavored, in the beginning, to define civilization and to describe the fact which bears this name. Civilization seemed to me to consist of two principal facts: the development of human society and that of man himself; on the one hand, political and social development; on the other, internal and moral development. I have confined myself so far to the history of society. I have presented civilization only under the social point of view; and have said nothing of the development of man himself. I have not endeavored to unfold to you the history of opinions, of the moral progress of humanity. I propose, when we meet again, to confine myself especially to France, to study with you the history of French civilization, to study it in detail and under its various aspects. I shall endeavor to make you acquainted, not only with the history of society in France, but also with that of man; to be present with you at the progress of institutions, of opinions and of intellectual works of all kinds; and to arrive thus at a complete understanding of the development of our glorious country in its entirety. In the past, as well as in the future, our country may well lay claim to our tenderest affections.
